72,410. The agreements with temporary engineers appointed in India were renewed every year, so that they knew exactly the terms upon which they were employed, and they could leave at a month's notice. The distinction between an officer who had not reached executive rank and the engineer in private employment was that the latter could go off to another firm, while the former could not leave Government service, and he had that in mind when he said that an Assistant Engineer had a claim for something more than Rs. 800 if he was efficient.

72,411. (*Mr. Kent.*) There were reliable contractors who could undertake construction work but were not able to prepare plans and estimates.

72,412. He attached considerable importance to the *esprit de corps* which life at such an institution as Cooper's Hill fostered.

72,413. It would be quite possible by means of a central institution in England to arrange a curriculum to suit Indian conditions, and a central institution would be preferable to a large number of individual institutions which could not give the necessary special training.

72,414. The system by which an engineer obtained an appointment after a series of examinations spread over a long period was a better test of a man's ability than a single examination.

72,415. The provincial executive engineer was allowed one increment of Rs. 50 after he reached the ordinary maximum, but he thought two increments should be given, and correspondingly two should be given to Imperial engineers who were debarred from becoming Superintending Engineers but were efficient officers.

72,416. Travelling allowances were insufficient and a more suitable arrangement would be to provide a permanent travelling allowance as was done in some other services. He would give the allowance to the Executive Engineer of Bombay although he did not move outside the city. In certain cases stationary men might be given a smaller travelling allowance. Motor cars should be given to officers in places like Bombay and it would be also a sound thing to supply motor cars to men in the mofussil.

72,417. Transfers even in the districts cost more than the allowance given. Officers should be paid their actual expenses in all cases of transfers, but if Government prescribed any limit they should fix a certain allowance of trucks by rail and a certain number of carts by road. An officer suffered loss in every case of transfer, especially if the transfer was to a distant place. One officer who had been transferred from Poona to Nagar had been out of pocket to the extent of Rs. 250. When an officer was transferred during furlough he received no allowance to enable him to join his new appointment, and the witness suggested that the same allowances should be given in such cases as for other transfers.

72,418. No facilities were given to young officers to learn the Vernacular although they had to pass a language examination within two years of their arrival. It was in the interests of Government that all officers should learn the language as soon as possible and for that purpose new arrivals should be sent to Bombay, Poona or Karachi for three months to learn the language under a trained Government teacher, not the ordinary munshi or pundit of the country.

72,419. (*Mr. Advani.*) It was not possible for any selection committee in England to gauge the tact and qualifications of candidates in the management of men or to examine into their manners and temper, but he was not in favour of a probationary period in India on that account It was not easy to get rid of a man merely because he had a bad temper. He believed that an officer who was appointed to the selection committee for the purpose of aiding the committee in selecting the best men for India would not be influenced or biassed in any way by personal feeling.

72,420. The previous Public Services Commission had recommended increased recruitment from India for the Public Works Department, but there had really been a reduction. In those days the College of Science at Poona supplied two recruits a year and it was found that the number of Indian trained engineers was becoming excessive and a request was made that only one engineer should be appointed each year; that was agreed to by the Government of India and the Poona recruitment was reduced from two to one.

72,421. It was probably true that the term provincial had come into disrepute on account of the difference in pay and if the difference in pay was maintained the discontent might still continue.

72,422. The Presidency engineer received extra remuneration as a member of the Improvement Trust to compensate him for his extra work, and not for the higher cost of living in Bombay.

72,423. It was necessary for a district Provincial officer to keep up the same status as an Imperial engineer, but he could not say whether or not he could do so on the present scale of pay. Certainly in the junior ranks of the Provincial service the pay was too low.

The following evidence of this witness was taken in camera.

72,424. (*Mr. Abdur Rahim.*) The remark in his confidential written statement that "Europeans report adversely upon the Indian for independent, responsible positions, and favourably for positions where he will be under guidance," was true in almost every case. In order to avoid any misapprehension he wished to point out that this observation and that expressing the Indian opinion quoting Mr. Chitale's remark was preceded by the remark "The reports from the department are as follows:", which meant that questions had been recently put to the officers of the department and that it was their reports he was quoting. The department consisted of a certain number of officers, Europeans and Indians, and each of them had expressed his opinion for the information of the Commission. The reports referred to were not reports taken from the records in the department. Reports were made to the departments from time to time about the work of different officers, but it was not those reports to which he was referring.

72,425. Mr. Chitale was found unfit for administrative duties, and it was open to the Commission to ask for information with regard to European officers who had been passed over or found unsuitable. He had mentioned Mr. Chitale in particular simply because he had quoted his actual words. Elsewhere he had stated that there were some very good Indian officers who were notable exceptions, and by "notable exceptions" he meant notably good officers and not notable exceptions proving the rule with regard to other Indians.

72,426. With regard to the statement that Indians as a rule did not express opinions, he had in mind certain cases and if those cases were asked for by the Commission he would put them forward. It was true there might be similar cases in connection with Europeans, but he was referring to officers who habitually refrained from expressing their views. It was open in such cases for the head of the department to send the file back and ask for an opinion, but that was not done in one of the cases he had in mind. He was quite prepared to establish before the Commission that Indians habitually did not express their opinions.*

72,427. He had not compared the number of European officers who sent up cases without a report with the number of Indians, but he could not recall a single European case. He did not search for such cases; they came before him in the course of his daily work.

72,428. The remark in the written statement as to an officer lacking prestige unless his training enabled him to hold his own in any society referred both to European and educated Indian society. It was very difficult to specify instances without hurting people's feelings, but he could do so in cruder language if the Commission required definite information on the subject.

72,429. The remark that "the Indian officer's independence in public duties is interferred with by his family ties" was based on the known fact that the family ties of a man in India interfered very much with his work. In (g) (of paragraph 72,373) he intended to point out that an Indian officer was very much more likely to be tempted than a European officer, but of course if he withstood the temptation no harm was done. He was not prepared to give any case of a man taking a bribe.

72,430. The Zemindars referred to in the last paragraph of his confidential note were mostly Mohammedans and probably of the same class as the Zamindars in the Punjab.

(The witness withdrew.)

---

* *The witness afterwards wrote:—*

"In explanation of this answer I wish to state that although my service as Chief Engineer and Secretary to Government in Bombay dates from October, 1912 (1 year and 5 months only as remarked by Mr. Rahim) yet I was Chief Engineer in Sind from April 1912, and I have held administrative rank as Superintending Engineer since May 1901, *i.e.*, close on 13 years. It will be conceded therefore that my experience of the classes of men in the department as Executive and Assistants is a long one. I state that the *average* Indian officer (even including those who have been trained at home) is not as good as the *average* European in permanent employ. At the present moment we have on our list three Indians and one European who have been passed over for the rank of Superintending Engineer.

V. T. Agashe, Esq., late Sanitary Engineer to the Government of Bombay.

Written statement relating to the Public Works Department.

72,431. *INTRODUCTORY.*—I am a Poona College Engineer with nearly 24 years service, and appear as a representative witness on behalf of Indian Engineers of the Imperial Service in the Bombay Presidency. I shall touch upon those points only wherever the interests of the Indian College Engineers differ from those of the Imperial Engineers recruited from England. In other respects, I may be assumed to subscribe to the Memorandum prepared by Mr. Harrison, who represents the Bombay Imperial Service Engineers recruited from England.

(2) I may mention at the outset that the Indian Imperial Engineers would have one Indian Engineering Service, without any sub-division into Imperial and Provincial, and without any difference in pay, leave and pension rules, since all Engineers in the Public Works Department do the same work, and bear equal responsibilities, whether they are recruited from England or from the Indian Colleges.

(3) Moreover, Indian College Engineers have proved their fitness for the Public Works Department in Bombay, as in other parts of India, and have even risen to administrative rank (there are now two Poona College Engineers working as Superintending Engineers in charge of Divisions in the Bombay Presidency, in addition to an Indian Superintending Engineer from the Cooper's Hill College. A third Indian College Engineer acted in the Superintending Engineer's Grade last year for over 6 months, on the demise of a fourth Indian College Engineer who worked for 2 years as Sanitary Engineer to Government). Two of our Poona College Engineers have reached even greater distinction: one, Mr. Fardunji Kuvarji Tarapurwala, who earned a C.I.E., for his Famine Services, and who retired as Superintending Engineer, First Grade, 7 years ago; and the other, Mr. Vishveshvarayya, who retired as Superintending Engineer from the service of Government, to Mysore, where he was made Chief Engineer, and is now working as Dewan of that First Class State. As Indian Engineers have thus shown that they are as good as their European Colleagues, they claim that recruitment from the Indian Colleges should be doubled, especially as these Indian Colleges are now much better equipped than before, and now approximate to the best of such Institutions in Great Britain, as testified to by the Principals of the Indian Engineering Colleges. I had as Executive Engineer, under me, at different times, European Assistant Engineers, and also Indian College Assistants, and I can say that I did not find the work of the latter in any way inferior to that of the former. Double the present recruitment from the Indian Colleges, would mean the admission of two men instead of one, from each of the Engineering Colleges in the Presidencies of Bombay, Madras and Bengal, and 12 instead of 6 from the Rurki College. The first man out of a class of 20 to 30 is surely the best of his year, but there cannot be any great difference between the first man and the second best of his year. There will thus be no deterioration in the class of recruits to be obtained from these Colleges. It might be mentioned in this connection, that only in the years 1888, 1889, 1890 and 1891 were 2 recruits per year appointed to the Public Works Department, from the Poona Engineering College, and the Indian Superintending Engineer at present in charge of Deccan Irrigation, and the one who acted in that grade for 6½ months last year, were both of them the 2nd best of their respective years, *viz.*, 1889 and 1890.

72,432. **(I.) Methods of recruitment.**—Half the vacancies available each year, should be reserved for recruits from England, and filled by a competitive examination in England (as in the case of the I.M.S.) which should be open to students from the British Universities, and to British subjects from abroad without any distinction of colour or creed.

At present the total annual recruitment for the whole of India is about 37 (*vide* page 3 of Government of India's Memorandum), distributed as below:—

Civil Engineers appointed in England ...	20	23
Royal Engineers	3	
Civil Engineers from the Indian Colleges.	9	14
Civil Engineers by promotion from the subordinate grades.	5	

viz., 23 recruited from England and 14 in India. If as recommended in introductory paragraph 3, the recruitment from the Indian Engineering Colleges be doubled, the figures will be changed as shown below:—

Royal Engineers	3
Civil Engineers appointed in England ...	15
Recruited from Indian Engineering Colleges	18

thus ensuring equal recruitment from England and India.

As for the promotion of deserving Upper Subordinates, a new Deputy Engineer's Grade might be created as proposed by the Secretary to Government, Public Works Department, Bombay.

72,433. **(II.) System of training and probation.**—As conditions of working are different in England and India, it would be better if the recruits from England are apprenticed to Executive Engineers in the Public Works Department here, just in the same way, as recruits from Indian Colleges are. In England many of the Engineering operations are carried out by machinery, or mechanical devices, whereas here in India, they have to be carried out by manual labour, so that the practical training obtained in the management of machinery, or complicated mechanical appliances, is of little use, and the recruit has on arrival here, to learn the management of manual labour, as the Indian College apprentice has.

72,434. **(III.) Conditions of service.**—They are the same for both classes of Officers, English and Indian, and there should be no differentiation in name like Imperial Service and Provincial Service.

Under this head it might be mentioned that the promotion of Engineer Officers depends upon the confidential qualification reports sent up by their superiors, and it sometimes happens that an average man is superseded by another, simply because the latter had had opportunities of showing good work, while the former was not fortunate enough to get such opportunities. Such ought not to be the case. Similarly, on the other hand, vaguely worded reports ought not to carry weight, unless specific instances of deficiency are given, but such vague reports are sometimes considered to be sufficient to supersede a man. This is not right, especially when no intimation of an unfavourable report is given to the officer concerned. None should, as a principle, suffer who has not had any positively bad report about him.

72,435. **(V.) Conditions of salary.**—No increase in the rates of salary of the Imperial Service is proposed, but it is recommended that those of the Indian recruited members of what is called the Provincial Service Branch be raised to the level of the other, as both do the same work, and have the same responsibilities and are borne on the same lists. The same work and responsibilities ought surely to carry the same remuneration. As to the allegation of the expenses of English Officers being high, I beg to say that those of the Indian Officers are not less than those of the other. In this connection it has to be remembered that only the *ways* in which the two classes spend their income is different. It is admitted that the personal expenses of English Officers are higher, but as a set off against this should be put the expenses incurred by Indian Officers, on maintaining and educating their near relatives in addition to their family on account of the Hindu joint family system, so that at the end of the service, the two classes of officers on equal pay would be in similar financial circumstances. The difference in the scale of expenses is not moreover taken into account in paying individuals, such as whether the payee is a bachelor or a married man with a large family, and it ought not to effect the question of fixing the pay of any class of officers. In the case of other Departments, the Provincial Service is given less responsible work and so is paid less, but in the Public Works Department, they do exactly the same kind of duties and bear equal responsibilities, so that there is no valid reason why the Indian trained Engineer should be paid less than his European Colleague.

72,436. **(V.) Conditions of leave.**—The English Engineers are rightly given great facilities for going home on furlough. The Indian College Engineers ought likewise to have at least four years' furlough instead of two at present allowed, because under the present conditions, this latter has to be reserved to the end of the service, to provide against contingencies. But this want of sufficient rest causes early break down of the health of the Indian Engineer, as it would have done in the case of English Engineers, if they were not allowed furlough at frequent intervals. The interval between two periods of furlough ought also in the case of Indians to be reduced from 8 to 4 years. It would also be a great boon if the privilege leave be allowed to accumulate to at least 4 months, if the exigencies of the public service do not allow of an officer taking privilege leave while 3 months of it is due.

As to allowances while on furlough, the Indian Engineer ought to get the equivalent of the amount that the English Engineers get, *viz.*, £472 to £800, *viz.*, Rs. 7,080 to Rs. 12,000, whereas the present rules allow him Rs. 6,000 only as a maximum.

72,437. **(VI.) Conditions of pension.**—The pension allowed to Indian Engineers is a maximum of Rs. 5,000 for Executive Engineers and Rs. 6,000 for Superintending Engineers. These amounts were fixed when the pay of the Engineer Grades was 75 per cent. of the present rate of pay. Whatever sterling pensions are allowed to the English Engineers, the equivalent thereof in rupees at the ruling rate of exchange should be allowed to the Indian Engineers, as pension is mere deferred pay, and if the salaries of the two classes are equal, the pensions also must perforce be equal.

2. Indian Engineers should, like their English confreres, be allowed to retire on medical certificate after 20 years' service, and without medical certificate after 25 years' service, because the strain of active service in the Tropics tells as much on the health of the Indian Engineer, as it does on that of the English Engineer.

72,438. **(VII.) Such limitations as may exist in the employment of non-Europeans and the working of the existing system of division of services into Imperial and Provincial.**—It is the deliberate opinion of the Indian College Engineers that there should ultimately be no limitations to the employment of Indians in the Public Works Department, as they have proved their fitness therefor, and though at present they agree to have half the places reserved for recruits from England, still as years roll on, the percentage of Indians should continuously be increased. The present proposal of reserving half the vacancies for recruits from England, would mean the present preponderance of Europeans in the Department, because the recruitment of Indians in England is limited to 10 per cent. (though actually even this small percentage is not being worked up to), whereas the recruitment from Indian Colleges and Subordinates includes a considerable percentage of Europeans and Anglo-Indians, as is seen from the Government of India's classified list for June 1912, which shows that the number of these latter was 100, while the Indians numbered 103 only.

The Engineering service has since 1896, been subdivided into Imperial and Provincial, and this has caused great discontent amongst the Indian Engineers, because though the recruits now turned out by the Indian Engineering Colleges are, on account of improvements in their equipment and curricula, much better trained than the product of these Colleges of more than 20 years ago, still they are relegated to an inferior position, *viz.*, put into the Provincial service, while the latter used to be taken up into the Imperial service. And this has produced serious discontent amongst the Indian Engineers, who are now hoping for the abolition of the Provincial service.

It is admitted on all hands that the theoretical training in Indian Colleges is on a level with that in Engineering Institutions in Great Britain, and if practical training of advanced type, suited to the conditions obtaining in the Public Works Department, is to be undergone, the time for imparting to Indian Engineers such training is England is not in the beginning of a recruit's service, when he does not know exactly what is wanted in the Department, but after a service of 5 to 10 years, when he gets to know the wants of the Department, and when, on account of the previous training in the College and in the Department, he will be able to more easily pick up what is wanted from his observations on large works in England. The preliminary training should, in the case of both Indian and English Engineers, be obtained under actual service conditions, under Executive Engineers in charge of large works in India. If there are no suitable works going on in a Province, the apprentices from that Province might be sent to other Provinces where such large works may be going on. For obtaining an English training, study leave up to a year might be allowed to all Indian Engineers of 5 to 10 years' service, on the same conditions as are allowed to I.M.S. Officers.

72,439. **(IX.) Any other points within the terms of reference to the Royal Commission not covered by the preceding heads.**—I entirely concur with Mr. Harrison, the representative witness for the Bombay Imperial Engineers, in what he says with regard to the matters touched upon by him under this head, especially as to the utter inadequacy of travelling allowance at present allowed to Engineers on transfer.

Mr. V. T. AGASHE, called and examined.

72,440. (*Chairman.*) The witness was an Executive Engineer and represented fifteen officers of the Indian Imperial Engineers.

72,441. Officers recruited to the Imperial branch from the Poona College enjoyed all the privileges of Imperial officers and there were no complaints except with regard to pension and leave rules.

72,442. The division into Imperial and Provincial branches should be abolished and there should be one service with uniform conditions of salary, leave, and pension. His proposals were practically on the same lines as those put forward by the Provincial Service. There should be open competition in England with no selection and the present rule under which only ten per cent. of appointments were reserved for Indians should be abolished. It was a fact that the number of Indians in the Public Works Department was increasing (though not so the percentage which is going down) very slowly and that under the present system of selection the candidates were satisfactory, but Indians did not get in in sufficient numbers. He believed the best test for an efficient engineer was an examination, even though the local Government had recognised that better men were obtained by some form of selection.

72,443. Study leave in England should be given to officers with between five and ten years' service. It was well for a man to go to England as it widened his horizon and gave him greater experience.

72,444. The expenses of an Indian officer were as great as the expenses of a European officer, and when *two officers were doing the same work they should receive the same pay. He did agree that in order to attract an Englishman to India it was necessary to offer him a salary above his market value in England.*

72,445. There was keen competition to get into the Provincial branch of the service and the standard of competency amongst recruits was *high; and it was* a fact that the rates of pay in the Provincial branch of the Public Works Department compared favourably with the rates of pay in other Provincial services. At the same time he was of opinion that if the pay was not increased the discontent in the service would continue, because the so-called Provincial service in the Public Works Department was altogether different from the Provincial services in other Departments, in that the latter were subordinate services, whereas the former was superior service equal in status (except as regards pay, leave and pension) to the Imperial Service.

72,446. In his reorganized department he would not have promotion from the upper subordinates grades to the superior cadre because the promoted men would

come in at a late age, thirty-four or thirty-five, and would block the promotion of those in the department.

The officers now recruited to the upper subordinate service had practically the same qualifications as the officers in the Provincial branch and he only denied them the opportunity of entering the superior service because they would get promotion too late. If they were promoted earlier his objection would be removed.

72,447. (*Sir Valentine Chirol.*) He would not favour the reduction of the rates of pay now granted in the Imperial Service, both to Europeans and Indians, to the level of the rates now paid in the Provincial Service, because if that were done men would not come out from England. His suggestion for increased pay was put forward not only in order to obtain good men from Europe, but to satisfy the feelings of the Indians in the service, and for that purpose he was quite prepared to see Indians paid above the market rates of the engineering profession. He was not aware that the pay of the Provincial Engineering Service at present was about the average pay that English engineers received in England, but if it were so, he still desired to raise the standard of the Indian in his own country above that which an Englishman earned in England, because they had to work side by side doing the same duties. From the point of view of the State it might not be right that the Indian taxpayer should be made to pay more than the legitimate market rates, but on the other hand there was no market for an engineer in India. One Executive Engineer of the Provincial Service had resigned his appointment to take up private practice and was earning more than he received in the department. It might be one remedy for the grievance of the Indian engineers in the Provincial Service if they resigned their appointments and trusted to what they could obtain in private employment, but that was not a possible solution.

72,448. (*Mr. Madge.*) He was of opinion that the law of supply and demand should not operate in India in connection with the engineering service.

72,449. (*Mr. Advani.*) At the present time the Indian engineer in the Provincial Service was not being paid the market value of his work, as engineers could earn much more in private practice. It was quite possible that the market value in England, where there was so much competition, might be less than the market value in India, and that an Indian, if his market value was considered, would receive more pay than he was getting at present. It would be very difficult for an officer with twelve or thirteen years' service to leave the service in order to take up private practice.

(The witness withdrew.)

K. S. FRAMJI, Esq., Executive Engineer, and Professor of Engineering, College of Engineering, Poona.

Written Statement relating to the Public Works Department.

72,450. *INTRODUCTORY.*—I appear as a representative witness on behalf of the Provincial Engineers employed under the Government of Bombay. I passed out of the Poona College of Engineering in the year 1896 and was the second man to join the Provincial Service after its rules were brought into operation. I am also a graduate (B.A.) of the Madras University. I took this degree before I joined the Poona College.

I have served in many parts of the Presidency, including Sind, both in Irrigation, and Roads and Building, districts and have varied experience. I have worked under both Europe- and Indian-trained Imperial Engineers and have had under me also both Imperial (Europe-trained) and Provincial (India-trained) Assistant Engineers, for short periods. My services are at present lent to the Educational Department and I am employed as a Professor of Civil Engineering in the Poona College. I have been in the College now for nearly three years. I have also been an examiner in Engineering at all the Engineering examinations of the University of Bombay.

The Poona Engineering College has undergone several improvements and revolutionary changes since the time I was a student at it, both as regards reorganization of course of studies, which is now made of a more practical and comprehensive nature, and in the equipments which now render it possible to impart even a higher standard of training of a practical and experimental nature, which is of such vital importance in developing the powers of initiation and self-reliance of an Engineer. The staff is also considerably augmented.

The large and magnificent scale on which the new Engineering Laboratory of the College is being fitted up will ensure that ample facilities and scope will be afforded for original research work and that practical training, in the testing of materials and in the details of construction and working of modern mechanical appliances (*e.g.*, steam, oil and gas engines, hydraulic machinery, electric motors, etc.), will be imparted to the students on the same high standard as is possible to be obtained in the best Engineering institutions in the United Kingdom.

Recently the Bombay Government have appointed an Advisory Committee for the College. The functions of the Committee are "to advise Government on questions of policy, organization, staff, buildings, equipment, the formation or reconstitution of classes, curriculum," etc.; also "to take the initiative in suggesting improvements and reforms in respect of any of the above matter."

As the Advisory Committee has on its board the Chief Engineer and Secretary to Government, Public Works Department, and other practical Engineers (officials and non-officials), it is obvious that such a Committee would exercise a most salutary control and succeed in ensuring that the training and knowledge imparted in the College, both theoretical and practical, be thoroughly perfect and up-to-date and such as would fully meet the requirements of the Public Works Department.

The course of studies, as laid down by the Bombay University, to which the Poona College of Engineering is affiliated, extends over three years, but while the general body of students present themselves for the final or degree examination in the year succeeding that in which they pass the Second year's examination, such of the students as wish to make their studies as thoroughly complete and perfect as possible, with a view to be better fitted for the keen competition which takes place for the guaranteed appointment, invariably spend an additional year before they appear for the final examination on the results of which the selection for appointment as Apprentice Engineer depends; in other words those who are in the run for the guaranteed appointment find it necessary to devote four years to their course of studies while the University requirements need only three. I make this remark to show that while the students who succeed in obtaining the guaranteed appointments of Apprentice Engineers virtually undergo the same course of studies, side by side, with those who ultimately serve in the Public Works and other departments in subordinate positions, the standard of perfection is greater in the former than in the latter. In the Roorkee and Madras Engineering Colleges the classes and standard of training are entirely different for Engineers and Subordinates, and the same is now being sought to be done in the Poona College, what, in practice, is attained, in a more or less degree, even under existing conditions. Definite proposals are shortly to be placed before the Advisory Committee, referred to above, to the effect that in order to take full advantage of the new Engineering Laboratory, the course of studies should be so revised and supplemented by an advanced experimental course in the Laboratory that the more intelligent and selected students should be made to undergo a thoroughly complete and comprehensive course, both theoretical and practical, extending over a period of four years, while a less elaborate course of three years' duration is proposed for the rest of the students. These proposals would, it is believed, be soon put into effect and the appointment of Apprentice Engineer will be conferred on the best student of the former class.

I have found it necessary to dilate at some length on this subject (which is covered by the 2nd head—Systems of Training and Probation—prescribed by the Royal Commission) in order to refute the hostile evidence sought to be advanced by some to belittle the

work done and the type of men turned out by some of the Indian Colleges where, it is alleged, the Engineers and Subordinates are made to undergo the same kind of training.

72,451. **(I.) Methods of recruitment.**—There are five sources of recruitment in the Department for the superior posts:—

(*a*) by the appointment of Civil Engineers obtained from England;

(*b*) by the appointment of Royal Engineers;

(*c*) by the appointment of candidates who have proved successful in the competitive examinations of the Indian Engineering Colleges;

(*d*) by the appointment of Temporary Engineers, howsoever secured, that is whether from England or in India; and

(*e*) by the promotion of selected officers from the subordinate grades of the Public Works Department.

With regard to (*a*), (*c*) and (*e*) it is desirable that one uniform system of recruitment should be adopted, all through, instead of the present system of selection in England, and part competition and part selection in India. The selection system, though theoretically sound, proves faulty in practice, and is certainly not suited to the conditions existing in India, so that the proposed uniformity in practice cannot be attained by extending to India the method of selection followed in England. The competitive system is working satisfactorily for the Indian Civil Service and it is not clear why it should not give satisfaction in this Department also. It is, therefore, suggested that a system based purely on *real* competition should be introduced both in England and in India for the recruitment of the Imperial Service. The Provincial Service will then disappear as such, and so far as officers of the class (*e*) are concerned, an additional grade of Extra Assistant Engineers may be created in the Upper Subordinate Class carrying a maximum pay of say Rs. 650—700, and the rules for promotion in that class may be so modified as to make it possible for deserving subordinates to rise to that pay in about 25 years' service.

As regards the competitive examination proposed for admission to the Imperial Service, it is recommended that certain Engineering institutions in the United Kingdom and in India should be recognised, and graduates or superior diploma holders from these institutions may be admitted to an open competitive examination both in England and in India. The examinations should be held in London and Delhi. They need not be simultaneous, but the standards of both the examinations must be identical, and they should be held at about the same time. English or Indian graduates, both from English or Indian recognised colleges, should be allowed to compete in these examinations without any restrictions to members of any class. To ensure thorough representation of all communities, the doors of the Indian Engineering Colleges should be thrown open to all subjects of His Majesty, including subjects of Native States, and admissions to the Colleges should be by means of open competitive examinations, as is done in some of the Colleges at present.

The age of the candidates for the competitive examinations in London and Delhi should be between 23 and 25 years. The subjects should be selected solely with regard to the requirements of Indian Public Works Department, *e.g.*, Indian Irrigation, Indian Railways, and Indian Architecture: also one Indian language.

The proportion of recruitment based on the results of the competitive test in London and Delhi should, at present, be one to one, and this proportion should gradually be increased in favour of India as conditions change. Unless a greater proportion of the superior appointments in the Public Works Department are reserved for competition in this country, the legitimate aspirations of the public in India cannot be satisfied. A gradual increase in the number of appointments annually to be given to the Indian Colleges by reducing the English recruitment was one of the recommendations made by the Public Service Commissions of 1886-87.

It must, further, be arranged that the competition is real in both the examinations. This can be secured only by offering a fixed number of appointments in proportion to number of competing candidates. A suitable arrangement would be to offer only one appointment for every three candidates appearing for the examination with a maximum limit of 50 per cent. for each centre. In case sufficient number of candidates are not available at one centre, the deficiency can be made up by offering more appointments at the other centre. The ratio of one to three candidates, suggested above, is not unfair or unreasonable. At the Poona College, for instance, it has frequently happened that no less than 40 or 50 candidates have competed for one single appointment, and in Rurki about 125 candidates for five or six appointments.

There is no likelihood of Indians swamping the Department by this arrangement. A reference to the Government of India classified list corrected up to 30th June, 1912, would show that, notwithstanding the present unfavourable conditions of service, out of 203 Engineers recruited in India, 100 are Europeans, and 103 Indians, and if the Provincial Service is altogether abolished, as is recommended, the number of Europeans recruited in India will be much greater than now, for almost all the members of the Anglo-Indian and domiciled communities, who have now to go to Europe for their Engineering training to get entrance into the Imperial Service, will try to be recruited in India. Besides, it is not improbable that some of the men educated in Europe may come out to India so that they may learn the profession in the country in which it has to be practised, and may compete at the Delhi Examination; an instance of this nature actually happened at the Rurki Entrance in 1871-72, when the conditions and the salaries offered were tempting enough for men to come out from England to compete at Rurki. Furthermore, in addition to the Indian recruitment, there will be the London recruitment, which will always ensure the preponderance of the European element in the service.

It has also to be remembered that the Public Works Department is purely a professional and scientific service, and considerations about the preponderance of European element in it are not so weighty as in the Revenue Service, as this Department has no share whatsoever in the political administration of the country.

In this connection it may be mentioned that, though increased recruitment from Indian Colleges was recommended by the Public Service Commission of 1886-87, still the recruitment from these Colleges has remained absolutely unchanged, while the English recruitment has gone on increasing rapidly as the Department has been expanding. The total number of Engineers recruited from all sources for the Imperial Service during the last 10 years was, according to the figures supplied by the Government of India, 407, of whom only 13 were Indians; during the same period the Indian recruitment for the Provincial Service was only 90 (excluding promoted Subordinates). The proportion of recruitment from Europe and India was thus 407 to 9, as contrasted with the proportion of 21 to 9 at the time of the Public Service enquiry in 1886-87. Considering the figures for Bombay alone, it is seen that during the same period of 10 years, the proportion of Europe-trained Engineers to India-trained (including promoted Subordinates) was 4·7 to 1·6; in other words, the Indian recruitment has been only 25 per cent. of the total recruitment. Some arrangement, therefore, to allow for increased Indian recruitment at the same time as European recruitment in increased for supplying the growing demands of the Department, is obviously necessary so as to keep the proportion between Indian and European recruitment the same. Considering these facts, the recruitment of 50 per cent. in India, as suggested aboev, cannot be deemed excessive, specially when it is remembered that this recruitment will consist of all classes, namely, Anglo-Indians, members of the domiciled communities, and Indians.

In this connection it will not be out of place to enumerate a few of the advantages which Government derive from employing the Indian recruit in the Public Works Department where an engineer has to spend a large amount of public money, and must, therefore, have first-hand information as regards the conditions and rates of local labour, &c.

(1.) The Indian Engineer possesses the great and recognised advantage—a consideration on which great

stress was laid when the institution of a Military Staff College in India was advocated—of having received his training in the country in which he has to practise his profession.

(2.) He knows the customs and habits of the people with whom he comes in contact, and is therefore likely to understand them better than a European Engineer.

(3.) He can understand more efficiently the local conditions of labour, contracts, the requirements of Zamindars, &c., and is therefore in a better position to deal with them.

(4.) He can, more generally, decipher the vernacular records himself, and is in a better position to collect first-hand information instead of obtaining it through his establishment, which may probably be interested in one or other of the parties concerned. For the same reason he is in a better position to impart justice and exercise greater fairness in dealing with subordinates.

(5.) He is useful from the day he joins the service, as is publicly admitted by high officials, while the European takes some years before he is equally useful.

(6.) Because of some of the above advantages he is found more useful on famine work, and has been employed to a greater extent on such works. His preferential employment on such works is an index of his powers of organisation and initiation.

In the event of the Imperial Service being thrown open once again to the India-trained recruit, as recommended, the members of the existing Provincial Service who are already listed with the Imperial Engineers, should be admitted to the same scale of pay as their Imperial confrères.

72,452. **(II.) System of training and probation.**—There is no guarantee that the preliminary training obtained at present by recruits from England will meet the requirements of the profession in India. The training should undoubtedly be specially directed to one end, *viz.*, the efficient performance of the duties required of an Engineer in India, and this can only be achieved by prescribing specially selected subjects, including one Indian language, for the competitive test.

As a matter of fact, the training, including the so-called practical experience in England, received by the present recruits is of no use for Indian works, and they have always to receive a fresh training in India to make them useful officers. While, in the case of the Indian recruit, the preliminary training is solely directed to meet the requirements of the Department, and is considered sound and sufficiently exhaustive. This fact has been publicly admitted by persons fully qualified to speak on the subject even before the Royal Commission.

It is believed that certain Imperial officers hold the opinion, as brought forth in the evidence, that the Provincial Engineer or rather the India-trained Engineer and his work are inferior in certain respects to the average Europe-trained Imperial Engineer and the work turned out by him. Such hostile evidence merely betrays narrow-mindedness and an attempt to maintain the gulf of separation which has been unjustly created between the two services, in point of pay. Evidence of this nature will not stand the test of close and searching scrutiny and can be easily refuted by quoting specific instances in which Indian College Engineers have displayed remarkable ability and efficiency, even in administrative ranks, and proved themselves in specific cases, to be even superior when brought in competition with Imperial Engineers. The high standard of training that they get in India and their natural intelligence and ability have enabled them to attain conspicuous success and to prove themselves equally capable as their Imperial confrères to fill any office in any branch of the department. The weighty testimony of so able and experienced an officer like Mr. F. R. Bagley, retired Chief Engineer, Public Works Department, Railways, who had a brilliant and distinguished career extending over forty years and through whose hands several Imperial and Provincial Engineers had passed, will amply bear out the above remarks. His memorandum and the record of his evidence are before the Royal Commission from which it will be seen that an experienced officer like him is also strongly of opinion that there is no systematic training of Engineers in England at present, while that in India is good and such as turns out a class of men who are qualified to do the work required of them: besides he characterises the so-called practical experience of England as being "generally a farce." Further proof of the high standard of training of India-trained Engineers can be had in the fact that even in the Professional Examinations of Assistant Engineers—which is a test of both theoretical and practical knowledge—India-trained men have generally succeeded in passing them soon and within the prescribed time and in their *first* attempts.

It will be appropriate to refer here to the opinion expressed by so great an authority as Mr. C. E. Mallet, of the Advisory Committee for Indian students, appointed by the Secretary of State, who, in his last annual report, says (as reported in one of the Bombay dailies) that "it is unfortunate that students desiring ultimately to make railways, bridges, and roads, leave India, where opportunities exist, for England, where such opportunities are more rarely found. It would be a great assistance," adds Mr. Mallet, "if the Railways and Public Works Department in India would afford Indian students such facilities as are so difficult to obtain here." If this suggestion is made for private students it would be applicable, with greater force, in the case of Government officers, on probation, who can be given every facility for practical training, on their *own* works, when such opportunities exist in India to a greater extent than in Europe.

From my personal knowledge and experience as Professor of Civil Engineering in the Poona College, and after carefully contrasting the curricula of studies prescribed in the Indian Engineering Colleges and those of the United Kingdom, I am forced to the conclusion that the former are more suited to the requirements of the Department than many of the latter, and are even in some cases, of a more difficult nature. This is supported by the results of certain Poona and other Indian College graduates who having failed to qualify themselves for the guaranteed appointments here, have easily succeeded in obtaining, after a short course of study, the necessary English degrees to qualify themselves for appointments in the Imperial Service and have been so appointed. Further, some graduates have also been able to qualify themselves easily for the Associate Membership of the Institute of Civil Engineers by passing that examination in India—one of the tests prescribed for nomination of recruits to the Imperial Service.

The probationary period, therefore, which is enforced in the case of the alumni of the Indian Engineering Colleges should be insisted upon as an indispensable condition in the case of the English recruit as well. This probationary period in the Department in India is absolutely necessary, though instances are not wanting in which some Provincial Engineers have not been given any opportunities for practical training on works during their apprentice periods, but have been placed in charge of important sub-divisions and made to carry out the duties of the ordinary trained officer, which they have successfully preformed. Recently, however, the Bombay Government have issued stringent orders on this subject and have laid down the lines on which the practical training of all Apprentice Engineers should be conducted.

It is further proposed that after the selections of the candidates are made on the results of the competitive tests in London and India, as suggested above, the recruits should be consulted, with a view to specialization, as to the class of work on which they desire to be trained, such as Railways, Irrigation, Roads and Buildings, Sanitary Engineering, &c., and as far as practicable the training might be arranged in accordance with their tastes and inclinations. They should all, whether European or Indian recruits, pass one year's apprenticeships in the countries which can impart the best training in that branch of Engineering. For instance India will be best suited for Irrigation training and possibly Railways, and Europe for Sanitary Engineering, and so on. The Secretary of State should make arrangements for the proper training of apprentices in Europe, and the Government of India for those who are to learn work in India.

All the apprentices should be paid a reasonable salary, and all the expenses of training, such as payment of premia, &c., should be borne by Government. By this system a special training required for special branches will be imparted and this will serve the beneficial effect of keeping the officers of a scientific service up-to-date. The division of the Public Works Department into separate branches such as roads and buildings, irrigation and railways is already carried out in some provinces, and in others it is being carried out gradually. This may be expedited and brought into effect as early as possible.

It may be remarked that the conditions of this probationary period should be observed in the strictest sense, *i.e.*, it should involve selection and a possibility of rejection at the end of it. For candidates from England free return passage for rejected candidates may be provided to meet the plea which may be urged that this condition may deter candidates from England by reason of the attached risk.

72,453. **(III.) Conditions of service.**—The conditions of service for recruits from England and India, who are required to do identically the same work and bear the same responsibilities, differ very much, and this is the principal cause of the great discontent that prevails amongst the Indian recruits.

Ever since the first of the Indian Engineering Colleges was established in the year 1847 and until the year 1895, the Indian Engineers have enjoyed full and equal rights and privileges with engineers recruited in England and have done exactly the same work. They have also done the same work after the Provincial Service was introduced in 1895.

When the Cooper's Hill College was established in 1871 it was feared that its establishment would injuriously affect the position of the Indian Trained Engineers, but to dispel this fear the then Lieutenant-Governor of the North Western Provinces, Sir William Muir, after consulting the Government of India, gave an authorised assurance in a public speech delivered at Rurki in November 1873 that the Cooper's Hill College would in no degree affect the privileges enjoyed by the Indian Colleges or the appointments guaranteed till then, to the Colleges, as the requirements of India were large enough to provide for all the Engineers recruited both in England and India on terms of equal rights and privileges.

Some time later, however, the Provincial Engineering Service came into existence with its pernicious results. It was the outcome of the unjust and unsound recommendations of the Public Service Commission which was appointed in 1886 to "devise a scheme which may reasonably be hoped to do full justice to the claims of the Natives of India to *higher* and *more* extensive employment in the public service." While the Commission did the good expected of it by laying down strong and sound reasons for creating Provincial Service branches in various other Departments they distinctly erred in the case of the Public Works Department in which they evidently failed to realize that the conditions were entirely dissimilar. This Department was one of those in which recruitment used to be made on an equal footing as regards pay, promotion, duties and responsibilities for recruits from Europe and India, and hence in recommending the creation of a Provincial Service for it, on a lower scale of pay, they took a distinctly retrograde step. In most other Departments which resembled the Civil Service more closely than the Public Works, either the Provincial Service scheme was not introduced at all (in which superior posts were open to Indians) or where it was introduced it regularized recruitment and considerably raised the status and dignity of the subordinates and ensured more extensive employment of those Indians who had never before got any better treatment than employment as subordinates. For instance conditions in the Provincial Civil Service (Revenue) were made so attractive and gratifying as to render it possible for selected officers of the Deputy Collector's grade—who unlike the Engineers are men without any special technical training or professional qualifications—to rise to certain listed posts of Collectors on the high salaries of Rs. 1,200 and Rs. 1,600 per mensem.

The situation created by the institution of the Provincial Engineering Service is seen to be all the more unjust when it is remembered that no such differences in pay or prospects were introduced in other Departments like Finance, Accounts, Traffic, Salt, etc., in which, as in the Public Works Department all officers whether recruited in England or India were on a footing of equality. This differentiation in treatment is all the more unendurable when it is realized that in these Departments recruitment in India is made by nomination and the training and educational qualifications of the recruits are not of the same high standard as of the recruits in the Public Works Department, in which recruitment is made by open *competition*.

The Public Service Commission seems to have based its recommendations regarding the Provincial Engineering Service on the ground that Engineers obtained from England received a better professional training than that which the Indian colleges were capable of affording. This conclusion has not been confirmed by what has subsequently transpired, for men trained in Indian colleges have attained the highest ranks in the Department *since* the year 1887 when the said Commission sat. Their high standard of qualifications and professional merits have been admitted by officials of the highest ranks who have come in close contact with all classes of Engineers and have also been recognised by Government by the bestowal of titles such as C.I.E., etc., on India-trained Engineers.

The Government of India, while giving effect to the recommendations of the Public Service Commission, also recognized that the conditions in the Public Works Department were quite different from those in other Departments, by introducing, in the Public Works Department Provincial Service, no further changes from the conditions originally existing except in the matter of pay only, the Provincial Officers still being borne on the same list and required to do the same work and bear the same responsibilities as their Imperial confrères. The policy recommended by the Commission was also not consistently followed by the Government of India in the case of some temporary Indian College Engineers. Certain officers who had failed to secure appointments in Rurki and who had no special claims whatever, were subsequently made permanent and put on the Imperial list, while officers who had secured guaranteed appointments were placed on the Provincial list and still continue to remain on that list because of the absence of any provision in the rules to transfer those men to the Imperial list, however competent they may be.

These facts clearly indicate (1) that the policy advocating the adoption of the Provincial Service Scheme for the Public Works Department as suggested by the Public Service Commission is unsound, (2) that in accepting it the Government were ignoring the pledge given by Sir W. Muir in 1873, and (3) that Government have, themselves, broken away from it and have relaxed or infringed the rules in the case of certain temporary Engineers. Justice and equity would, therefore, demand that the rules of the Provincial Service should be entirely set aside for *all* officers, and that the India-trained Engineers should be reinstated in the position they formerly held, *i.e.*, they should be placed on terms of equality with the Imperial Engineers.

The Provincial officers, subjected to these disabilities and grievances, have been sending memorials to the Government of India and the Secretary of State for the abolition of the Provincial Service since 1902, but have not received any redress as yet. They have been promised full consideration of their case after the investigations of this Commission are completed, as will be seen by the replies (given below) of the Under Secretary of State in the House of Commons. The Provincial Engineers now concentrate their hopes in the Royal Service Commission for a complete redress of their long-standing grievances by recommending the entire abolition of the Public Works Department, Provincial Service. Such an act of justice and grace will give a further impetus to technical education, to which so much attention is being rightly devoted, and will also prove a source of intense gratification not only to the Indian communities but also to the Anglo-Indian and the domiciled European communities, who have proved themselves particularly suited

for this profession, as judged by the history of the careers of the distinguished men turned out by the Rurki College, since its establishment.

The questions and replies referred to above are as follows:—

I. The Under Secretary of State, Mr. Montague, made the following statement on the 15th May 1912, in the House of Commons in reply to certain questions:—"That it was impossible to state exactly when the decision would be reached in this most difficult and complicated case. The Secretary of State in Council had already sanctioned certain increases in pay, which, he hoped, would satisfy those interested, but had found it necessary to reserve other parts of the Governments of India's proposals for further consideration. The matter would be expedited so far as was possible till a final decision was reached on all issues. Lord Crewe was not prepared to consider the laying of papers on the table." The "increases in pay," referred to above, are those granted in the 1912 scheme, which merely gave what had been proposed to be withheld and taken away by the 1908 scheme.

II. In the 10th October 1912, again, the following questions were asked in the House of Commons and the Under Secretary of State gave replies as quoted below:—

Questions.—(1) "Whether a final settlement had yet been arrived at in the case of the Provincial Engineers; would he state what were those parts of the Government of India's proposals which have been reserved by the Secretary of State for further consideration, and when a division upon them would be taken?"

(2) "Whether it was proposed to restore, either completely or partially, to the Imperial Service, those Provincial Engineers who had received their training at Indian Engineering Colleges?"

(3) "Whether the Secretary of State would arrange that the members to be co-opted on the Public Services Commission, to represent the Provincial Engineer Service, should be taken from those who might be duly selected for the purpose by the Provincial Engineers themselves?"

Replies.—(1) and (2) "As the Honourable Member was informed on May 15th last, orders have been passed sanctioning certain increases of pay to the Provincial Engineers. The subject reserved for future consideration is practically the one mentioned in the Honourable Member's second question, *viz.*, whether any change shall be made in the system of recruitment for the Imperial Service, and if so, under what limitations and conditions, so as to allow the appointment or promotion to that service of Engineers trained in India. This subject is covered by the terms of reference to the recently appointed Royal Commission on the Public Services in India."

(3) "The procedure to be followed in the matter mentioned has not yet been settled. In any case the selection of co-opted representatives will be for settlement by the Royal Commission itself."

72,454. **(IV.) Conditions of salary.**—(1) *Salary.*—The Indian recruit draws approximately two-thirds of the Europe-recruited officer. Considering that both have to do the same work, bear the same responsibilities, and maintain the same social position in conformity with their rank in the Department, this practice of paying the two classes of officers at different rates is utterly unfair and unsuitable. It is contended that emoluments should depend on services rendered, and that the distinction between the two classes of officers who do the same work should be obliterated. Such a difference has resulted in the following anomalies and defects:—

(*a*) The minimum pay of India-trained Executive Engineers is much less than the maximum pay of the Imperial Assistant Engineers. Under this arrangement, on several occasions, an Assistant Engineer of the Imperial Service in charge of only a sub-division has been drawing more pay than his immediate superior of the Provincial Service, bearing more than double the responsibility, and having to maintain a much higher social position suited to his rank. The outside public can have no idea of the detrimental effect that such an arrangement has on the discipline amongst the subordinate officers, for in India the position of an officer and the respect due to him are gauged not so much by the rank he holds as by the pay he draws.

(*b*) The minimum pay of an India-trained Superintending Engineer is less than the maximum pay of an Imperial Executive Engineer.

(*c*) Anomalies exist in connection with local allowances as per Appendix 19 of the Public Works Department Code. It will be seen that subordinates of the rank of Sub-Engineers get better allowances (in the form of Presidency and other allowances) than the Assistant and Executive Engineers of the Provincial Service though they have neither to live in the same style nor to maintain the same position. On this account cases have occurred where senior Sub-Engineers have refused promotion to the Offiers' grades.

(*d*) Generally the pay granted to India-trained recruits is inadequate and is not commensurate with their work and responsibilities.

(*e*) The minimum pay of Rs. 535 fixed is so low that it is not even a living wage for an Executive Engineer. From a statement of expenditure furnished by an Executive Engineer (Provincial Service), who is at present drawing a salary of Rs. 535, it is seen that after he has met all his outside expenses such as disbursing payments for house-rent, menial establishment, the education of his children, and after paying contribution to Civil Engineers' fund, he has only a balance of Rs. 55 left for his personal, domestic, and other requirements of life, and for the provision he has to make for extra expenditure consequent on transfers, and on account of ill-health, or visits to his home or other parts of India, &c. The statement in question can be produced if required.

It may be argued that an Indian drawing Rs. 535 need not run into such expenses and that other Indians drawing similar salaries in other departments find them sufficient. This argument may be met by pointing out that Indians belonging to other departments and getting similar salaries are in subordinate positions and are not required either to pay such heavy rents or to live in the style and position of an Executive Engineer, who is the local head of the Department. The latter has to move freely among the District and Divisional Officers, and it is in the highest degree desirable that he should receive adequate pay and emoluments (similar to the Imperial Executive Engineer) so as to be able to maintain his dignity as the principal officer of the Public Works Department in the District, filling a high post of trust and responsibility.

It often happens that a Provincial Officer drawing a low salary succeeds an Imperial Officer on a much higher salary in the same place, and he is required to maintain the same establishment at the same rates of pay, join the same institutions, such as local clubs, &c., and live in the same style. It is, moreover, a popular belief that Government also expects him to mix socially with other District officers in the interests of work, and in one instance, at least, it is said that it was hinted to a Provincial Executive Engineer that even his promotion depended, to some extent, on the nature of his *social* relations with other District officers. Unless, therefore, he is adequately paid, it is not fair to place an officer of Government in such position.

It is in consequence of such a false and incongruous situation which a Provincial Engineer finds himself forced into—a situation which is rendered all the more galling when contrasted with the easy and highly affluent position, unencumbered by any social obligations, which his contemporaries at College, possessing very mediocre and far inferior abilities, are found to be enjoying in the pursuit of independent practice as Architects, Surveyors, &c., in places like Bombay, &c., that some of them have been seriously considering the desirability (a few have actually put the resolution into effect) of giving up their appointments under Government even at the sacrifice of their prospective pensions. This picture is by no means overdrawn, though it may apply only to a few cases.

It may here be mentioned that various flimsy arguments are being advanced by interested parties in favour of differential treatment, as regards salary, being accorded to Indians on the following grounds:—

(1) Imported labour should be paid more than indigenous labour.

(2) The market value of Engineers trained in India is much below that of Europe-trained Engineers.

(3) The mode of life of Engineers recruited in England is more expensive than that of those recruited in India.

(4) Inability of Indians to perform administrative work.

The fallacy of these arguments can be easily demonstrated.

(1) Every Engineer ought to know that it is not possible to get the *same* work done on the same spot by paying *different* wages. If imported labour has to be paid more for a certain kind of work, the wages of local labour have forthwith to be raised to the same scale. Such an argument will not be advanced by Englishmen in Australia, Canada, and other Colonies, because the Colonists will not entertain the same.

If imported labour is dissatisfied with the scale of wages offered, the obvious remedy lies in demanding higher wages than what *it* gets and *not* higher than what another class of labour—local labour—doing exactly the same work, gets.

Arguments of this nature must lose all weight and force if the resentment of imported labour can rest appeased, as appears to be the case, provided the local labour is paid on a *lower scale*.

(2) Whatever the relative values may be of Europe-trained and India-trained Engineer so far as the average type of men is concerned (this is not the point of contention at issue) it cannot, for a moment, be disputed that the *pick* of the Indian Engineering Colleges (who alone get admission to the superior grades of the Public Works Department and whose value is being sought to be depreciated) are as good and efficient as the Europe-trained men in the Imperial Service. This has been admitted, in public utterances as well, by distinguished and eminent persons qualified to speak on the subject. In support of the statement that such officers have the same market value as Europe-trained men, instances can be quoted in which India-trained officers have been employed, on or before retirement, by Municipalities, etc., on posts of the highest rank, on which Europe-trained men have been employed, either previously or subsequently, on the *same salary*.

Besides, no Municipal or any Public Body, or a Native State, etc., would ever think if employing any one class of labour at a higher rate, if it is possible to get the *same kind of work* done as efficiently by another class at a lower rate. Hence, so far as the Public Works Department requirements are concerned, such an argument, as has been advanced, is devoid of practical significance.

(3) As regards the cost of living, it may be pointed out that though the channels of expenditure in the case of Europeans and Indians may be different, they are as many and as varied in the one case as in the other. The Provincial Service does not consist wholly of Hindus or orthodox habits or principles. It includes Anglo-Indians, domiciled Europeans, Christians, Parsis, Mahomedans and unorthodox Hindus, also. Most members of these classes, when occupying high official positions, have been known to adopt the European standard of living, and while they and their wives may mix with Europeans freely, they cannot possibly forsake their Indian friends and relations who may not have advanced so far, so that they are often obliged to keep up a double establishment. Besides, unlike the European, an Indian has very often to support not only his own family, but a large number of dependents closely or distantly related to him.

(4) The argument regarding the inability of the Indians to do administrative work stands self-refuted, for past experience has shown that, in several instances, Indian Officers have, when given the opportunity, displayed conspicuous ability and been eminently successful in administrative work, for which their services have been rewarded by Government, in some cases, by the bestowal of titles as C.I.E.'s, etc.

Some of the highest appointments, in all departments, have been occupied by Indians with distinction, and the Indian Engineer has been no less conspicuous in this respect. Many Indian College Engineers have held administrative appointments and have done credit to themselves, their alma-mater, and their country; one of them is at present holding the highly responsible position of the Diwan of a premier State—an appointment requiring administrative ability of the highest order.

The work and duties of an Executive Engineer involve as much the exercise of administrative ability, especially in the Irrigation Branch, as capacity for the practical execution of work; hence, as almost all Indians are proved and acknowledged to be a success as Executive Engineers, there is no reason to believe that they will fail to display administrative ability in the higher ranks.

Having regard to all these considerations it is contended that emoluments should solely depend on services rendered, and that the distinction between the same classes of officers, who do the same work and bear the same responsibilities should be done away with as early as possible.

(2) *Local allowances.*—Similarly the proportion of two-thirds which has been carried to such an extent as to produce the anomaly of paying more in the form of local allowances to subordinates than the officers under whom they may be working, should be obliterated. This difference in local allowances is specially unjust, as these allowances are always given for a specific purpose, that is, as compensation for local disabilities, which equally affect both classes of officers.

(3) *Travelling allowance rules.* (*a*) *Travelling allowances for ordinary tours.*—The Engineer Officers get their travelling allowance at a daily rate when they are out of headquarters. They have to maintain their permanent conveyance at their own expense during periods of halt at headquarters. It generally happens that most of the Executive Officers have to pass nearly four months at headquarters when it is not possible for them, owing to climatic conditions, to move out, systematically, or for any length of time.

Further, taking into account the periods of absence from the district on short leave or during holidays as also the necessity of spending a few days each month at headquarters for accounts purposes, it will be seen that, roughly speaking, an Engineer Officer generally gets his travelling allowance for about six months only in the year, while he has to maintain at least two horses permanently throughout the year, and also pay for carting, etc., of his kit when he actually travels. It happens, therefore, in a good many cases that he is actually out of pocket as regards travelling allowances earned and expenditure incurred, so that a part of his already limited income has to be spent on travelling expenses, and this is not in keeping with the spirit of the Travelling Allowance Rules.

It is, therefore, suggested that Engineer Officers should either get a fixed travelling allowance like the officers of the Revenue Department, or the scale of their travelling allowances should be raised to provide for the actual travelling expenses. The fixed travelling allowance recommended is Rs. 150 a month for Executive Engineers, in accordance with what is actually given to officers of other departments of similar standing.

(*b*) *Travelling allowances on transfer.*—These have been universally recognized to be inadequate and it is hoped that the rules regarding these will be amended at the earliest opportunity so as to provide, at least, for the actual expenses incurred by officers on transfers, limited to say three times the railway fare or road mileage ordinarily allowed for touring. Liberal allowance should also be made for the carriage of furniture and personal effects.

(*c*) *Travelling allowance for short voyages by sea in coast districts.*—Though few officers are affected by these rules, it would not be fair to ignore the hardships to which they are subjected. All officers travelling by steamers are paid only *single* first-class fares for their voyages however short or long these may be. Allowances granted for journeys by rail prove insufficient to cover an officer's expenses when he is travelling with his family, but the hardships are greatly accentuated in the case of voyages by sea where only single first-class fare is allowed. The unfavourable nature of the rules operates very harshly, the more so in the case of Provincial Engineers with their low scale of pay, and substantial increase in the scale of allowances is urgently called for.

72,455. **(V.) Conditions of leave.**—Here again there is much disparity between the conditions applying to each of these two classes of officers.

Great stress has been laid on the advantage to be derived by an Engineer in visiting works in foreign countries, and the element recruited in England has received undue credit on this account. Unless the conditions of leave are the same, it becomes impossible for India-trained men, even if they desire to do so, to secure the same advantages in this direction as English recruited Engineers.

Again, the nature of an officer's duties in the Public Works Department involves continued exposure and discomfort for long periods, and the health of an India-trained officer suffers equally with that of imported men. There is, therefore, no reason whatever to perpetuate the present distinction.

Indian College Engineers should, therefore, receive exactly the same leave conditions as their contemporaries recruited from England. It is generally recognised that India-recruited Engineers break down in health much earlier than men obtained from England, and this is due to insufficient leave. There seems however no reason to apprehend that given equal opportunities the Indians will avail themselves of the leave rules more freely than they have been doing hitherto and that they will thereby put Government to extra expense.

Again, officers recruited in India in certain other services, *e.g.*, the Traffic Accounts, Opium, Finance, etc., are under more favourable leave rules, and there is no reason why India-trained Engineers should not be on an equal footing with these other services.

72,456. **(VI.) Conditions of pension.**—Here again there is a much resented distinction, *vide* Article 636, C. S. R., which will create invidious and unjust anomalies. For example, an India-trained Chief Engineer will draw less pension than his own subordinate recruited in England.

It is submitted that it is a well and universally established principle, that pensions are granted as retiring provisions for specific services rendered to the State, and it is, therefore, illogical and unjust to create or maintain any distinction in this direction between persons who have in fact rendered exactly the same services. In other words, pensions ought to be wholly and solely dependent on specific services rendered and not on place of original recruitment, for this does not involve any special merit.

72,457. **(VIIa) Limitations in the employment of non-Europeans.**—As urged above the Department should be recruited half from England and half in India for the present. The recruitment in England should be open to all British subjects equally, irrespective of domicile, colour, caste or creed.

Latterly, during the existence of Cooper's Hill College only 2 Indians were eligible for appointment even after competition, and at present the number of Indians eligible for appointment in England is limited to 10 per cent. of the total annual recruitment.

Limitations of this nature should be barred.

72,458. **(VIIb) Working of the existing system of division of services in the Public Works Department into Imperial and Provincial.**—The division of the Public Works Department into Imperial and Provincial sections has been anything but a success, and can never be so in view of the surrounding circumstances and the past history of the Department. The distinction created between the two classes of officers, who do exactly the same work and bear exactly the same responsibilities is intensely resented and will inevitably result in splitting up the whole Public Works Department into two hostile camps, and this must greatly injure efficiency. The interests of the two classes of officers are now widely divergent, and this is conspicuous in their relations. Concerted action has become impossible, and the general feeling of *esprit de corps* which formerly prevailed, has ceased to exist. In its place there will assuredly spring up a deep and widespread feeling of suspicion and distrust between the two classes of officers which must wreck harmonious working.

So long as the two classes possess, on the average, equal educational and professional attainments, and this is undoubtedly the case, any differentiation between them is unworkable. It is impossible to force a distinction in pay when none exists in attainments, and any attempts to do so must create complications and raise issues which it would be as well to avoid.

Again, it is, in fact true that many India-trained Engineers possess superior qualifications to some officers recruited in England.

It is, therefore, urged that the said differentiation, which is illogical and unjust, should be obliterated and extinguished, and that the alumni of the Indian Engineering Colleges should be restored to the position they formerly occupied, that is to say, there should be only one service in the Public Works Department.

72,459. **(IX.) Miscellaneous.**—*No analogy with other Provincial Services.*—It is widely felt that the resistance offered to the oft-repeated prayer of the alumni of the Indian Engineering Colleges to be restored to the position they formerly occupied, that is, on an equality with recruits from England, is due in a great measure to the apprehension that if this is accepted, other Provincial Services will be entitled to similar treatment.

It is submitted in reply, that the question of other Provincial Services is foreign to the point at issue.

There is no parallel between the case of Engineers recruited in India and other Provincial Services. Engineers recruited in India are not situated in the same relation to Engineers recruited from England, as members of other Provincial Services bear to the Imperial Officers of their Services. But, on the contrary, except as regards pay, leave and pension, there is in all other respects no distinction between the two classes of officers in the Public Works Department.

It is, therefore, submitted that any argument, opposing the restoration of the alumni of Indian Engineering Colleges to the position they formerly occupied on the ground that this would entitle other Provincial Services to similar treatment, is unsound and cannot be raised.

Temporary Engineers.—The position occupied by these officers in the Department is undoubtedly most unsatisfactory and requires construction. These Officers are at present recruited in an irregular manner, viz.:—

(*a*) From India-trained and duly qualified Engineers who have failed to secure guaranteed appointments when competing for them.

(*b*) From Engineers appointed under covenant in England.

(*c*) From unqualified persons appointed in India.

It is submitted that, except in special cases where experts are required, these officers should be recruited from qualified persons who have successfully undergone the prescribed training in any Indian Engineer-College, and that no other person should be engaged until this source of supply is exhausted.

It is contended that this arrangement will be greatly beneficial to the State Colleges in India, and will tend to attract suitable candidates.

The present conditions under which these officers serve are not such as to secure efficiency. There is practically no security whatever, for these officers are liable to be discharged with very limited notice regardless of the length of their service.

It is suggested that such service should be regarded as permanent non-pensionable service, and there should be an incremental scale of pay.

Mr. K. S. Framji, called and examined.

72,460. (*Chairman.*) The witness was an Executive Engineer and Professor of Civil Engineering in the Poona College. He represented the Provincial engineers.

72,461. The standard of efficiency amongst Provincial engineers was very high and there was keen competition for entry to the service, but he was not prepared to assume on that account that the salaries paid by Government were adequate. It had been found by experience that they were not adequate and the keen competition was simply due to the fact that the appointments in the service were so few. If the number of vacancies were larger the competition would not be so keen unless the conditions of the service

were improved. There was no sign at present of the competition falling off, but it was just possible it might do so. The great discontent which at present prevailed might prevent men of superior intellectual attainments entering the service.

72,462. Even though no European officers were recruited to the engineering service he would recommend the imperial scale of pay for officers recruited in India. Having regard to the service rendered, the officers were entitled to much higher pay than they received at present. The argument he had used in his written statement, that if imported labour was dissatisfied with the scale of wages offered they should demand higher wages, was put forward to show that Europeans should not ask for lower wages to be paid to Indians but for higher wages to be paid to themselves.

72,463. He did not agree that the abolition of invidious distinctions and the payment of a foreign service allowance to Europeans would mitigate the grievance that was felt, but if the alternative offered was a foreign service allowances or the maintenance of present conditions he would accept the foreign allowance.

72,464. The selection system of recruitment had proved faulty in practice but he could not give any specific instances of where that faultiness had occurred. Men who had been disqualified in India had gone to England and had obtained admission to the Imperial service although they were of an inferior type.

72,465. With regard to his recommendation for a competitive examination in London and Delhi, he thought it would not be impracticable to frame a syllabus for an examination of the kind suggested in the written statement, and such an examination would not be unfair to Europeans except perhaps in regard to the subject of language. He advocated sufficient attention being paid to such subjects as Indian irrigation, Indian railways, and Indian architecture, because he found that in the English university courses sufficient emphasis was not laid upon them. In some they were treated as optional subjects, and in some others they were entirely excluded. More attention was paid to Indian irrigation and hydraulics at Poona and Rurki than was paid in the British engineering colleges.

72,466. All candidates recruited in India or in England should have a year's special training on the class of work in which they desired to be trained, and during that year they should receive about three-fourths of their ordinary salary. That period of probation should be given to all whether they came from Europe or from Indian colleges.

72,467. He would stop the promotion of upper subordinates to the higher services. Most of the men who were now recruited in that way would, probably, under the scheme put forward, be recruited direct, about ten or twelve years earlier than they were now recruited. Most of the men who were recruited to the upper subordinate grade were men who had only fallen short of a guaranteed appointment by a very few marks. He did not intend to shut the door to promotion, as, under his proposal, with increased recruitment, men who now entered the upper subordinate service would stand the chances of being directly recruited to the superior service immediately on passing out instead of waiting, as they did now, for a good many years. Inferior students would go into the upper subordinate service and remain there, but their prospects would be greatly increased by the addition of an extra-assistant grade with a salary of Rs. 650 to Rs. 700, and if listed posts were reserved for them there would be no harm in giving them executive charges in exceptional cases.

72,468. (*Lord Ronaldshay.*) It would be practicable to recruit by means of a competitive examination with an Indian language included in the subjects. The language would form a very minor part of the whole syllabus and the time spent in studying it would not be wasted (even if a candidate was not successful in obtaining an appointment) more than what was inevitable in all similar cases.

72,469. (*Mr. Sly.*) The standard of admission to the Poona College of Engineering was the Previous Examination of the Bombay University, but there were applicants who had passed the M.A. and the B.Sc. The graduates entering the college were certainly above the average. Up to recently the first man on the list had the option of a Government appointment, but it was now laid down that the best man should be selected irrespective of his position on the list. He had known no case of refusal of the appointment. The second best man was offered an upper subordinate appointment, but very often he did not accept it, preferring to go into private employment or to go to England to qualify for the higher service. The upper subordinates and Provincial service candidates were all drawn from the same class, but in future they were to be given two entirely different courses of instruction.

72,470. He did not think the proposal to have a separate college for the whole of India for the Provincial service was a very sound one. The provincial colleges had been growing up to the requirements of the services and it would be a pity to relegate them to a lower status.

72,471. The present system of selection in England might possibly lead to cases in which inferior men came into the service and superior men were rejected. It was quite possible that the fact that a man went to England from Poona and took a good course of instruction for three years did not prove anything except that the training at Cooper's Hill, for instance, was better than the training in Poona.

72,472. (*Mr. Madge.*) It would not be possible to do away with the recruitment of Europeans, and the arguments he had put forward in his written statement as to the advantages gained by employing Indian engineers were not put forward as arguments in favour of abolishing the European element but in favour of the employment of Indians.

72,473. The examiniations he asked for would not be simultaneous in the sense that the same sets of questions would be prescribed, but the standard would be practically equal in every respect. To get over the difficulty which might be caused by the number of successful candidates in one year being larger than the number of vacancies extra recruitment might be made by increasing the cadre.

72,474. (*Mr. Abdur Rahim.*) The competitive examination held by the University covered a good deal of practical work, as the practical work done in the college had to be tested at the University examinations. The note books in connection with the laboratory and field work of the students were placed before the examiners. There was no real practical work before appointment such as was to be found at Rurki. The same kind of examination could also be adopted for English recruits, as field work and laboratory work, on the same lines, could be arranged for, both in England and in India. The schools would probably have to modify their courses to suit the requirements of the competitive examination.

72,475. (*Sir Valentine Chirol.*) The grievance with regard to salary would not be removed if the salaries of European engineers were reduced to the salaries of the Provincial service officers because the service was dissatisfied not only with the disparity of salary but with the lowness of pay. There had been instances in which men had been dissatisfied and left the service for other pursuits and had obtained better income.

72,476. (*Mr. Advani.*) In the granting of foreign allowances care should be taken to see that no anomaly occurred. No difference whatever should be made in the pay of the grades above assistant engineers, because the question of social status and dignity as well as the equality in work and in responsibilities came into greater play when a man reached the Executive Engineer's grade. The best form of foreign allowance would be a percentage of pay.

72,477. (*Mr. Kent.*) Indian students had been to Cooper's Hill and obtained appointments in India and he knew of no restrictions which limited the number of admission of Indian students at Cooper's Hill, though he believed there was latterly a limit in the number of appointments given to them..

(The witness withdrew.)

H. N. Allen, Esq., Principal, College of Engineering, Poona.

Written Statement relating to the Public Works Department.

72,478. **(I.) Method of recruitment.**—The present method of recruiting for the Provincial Service in the Bombay Presidency is, as far as I can judge, satisfactory.

Candidates are recommended by the Principal of this College, and are appointed as Apprentice Engineers.

Selection depends, to a large extent, on the place taken in the Bombay University Examination for the degree of Batchelor of Engineering; but other qualifications are to be taken into consideration by the Principal, in making his recommendations. I have no direct knowledge of the methods used in recruiting for the Imperial Service.

72,479. **(II.) System of training and probation.**—Under Government Memorandum No. 379-E. of 6th March 1908, Apprentice Engineers from this College have to send in monthly notes, on the work done by them, to the Executive Engineer under whom they are working. These are forwarded, through the Superintending Engineer, to this office, are examined and criticized by the members of the College staff, and finally returned through the proper channels to the Apprentice Engineer. We have thus an opportunity of seeing that the practical training is being carried out on satisfactory lines, and that the Apprentice Engineer is profiting by the opportunities given him to obtain practical experience on works, and in the office.

72,480. **(III.) and (IV.) Conditions of service and salary.**—The distinction drawn between Imperial and Provincial Engineers causes, I understand, some dissatisfaction among the latter. Although they hold the same offices as the Imperial Engineers they draw lower pay and, though this may be justified in some cases by the fact that they are able to live more comfortably than a European at less expense, there can be no doubt that it causes a soreness.

The difficulty might, perhaps, be got over by extending the period of Apprenticeship, for members of the Provincial Service, and appointing them as Assistant Engineers, third grade, at such a time as would make their total emoluments, before retiring, much the same as at present.

72,481. **(V.) and (VI.) Conditions of leave and pension.**—I have no information as to the working of the leave and pension rules in this department.

72,482. **(VII.) Such limitations as may exist in the employment of non-Europeans.**—Only one Apprentice Engineer is admitted to the Provincial Service, under the Bombay Government, annually. For many years only Indians have been recommended. Europeans and Anglo-Indians, who wish to study Engineering, as a rule go to the Thomason College, Rurki. As there is generally no very great difference in ability, and other qualifications, between the candidates who, in any one year ,obtain the first two or three places at the University Examination, there is little doubt that this College could supply a larger number of satisfactory Apprentice Engineers than at present. This will certainly be the case when improvements in the College course, introducing a much larger amount of practical work, which are now under consideration, have been carried out.

Several past students of this College have proceeded to England for further study, in the hope of being appointed to the Imperial Service. Two of these have received appointments.

Mr. H. N. Allen, called and examined.

72,483. (*Chairman.*) The witness was Principal of the Engineering College, Poona. He had served at the College during the whole of his service of thirteen years, but had been Principal only for the last three years.

72,484. The nominal qualification for admission to the college was the Previous Examination of the Bombay University, but it was possible to make very careful selection and obtain people who had high mathematical attainments or who had done very well in science. It was also possible to make sure that the English of the candidate was good enough to enable him to understand the courses fully. If a man had been a year in an Arts College and had passed a college examination at the end of the year he was qualified to appear for the engineering examinations.

72,485. A candidate could enter the college at about seventeen but men had entered as high as twenty-two or twenty-three. A man with the Previous Examination certificate might come in at eighteen, one with an Intermediate Arts at nineteen, and a B.A. or B.Sc., at twenty-two.

72,486. The course was for three years but students who wished to compete for the Government appointment of apprentice engineer generally stayed on for a fourth year. There was very keen competition for admission. Fifty students were admitted yearly for the Civil Engineering branch out of some two hundred applicants. Recently the course had been made stiffer and men in the B.E. Course were not getting through quite as fast as formerly. When things were in better running order he expected that about forty would pass through every year. The Advisory Committee of the College was now considering the entire reorganization of the college, separating the course into two, one for engineers, and the other for assistants, and in that case only a comparatively small number would be taken for the engineers' course. At present they were altogether in one class. The engineers would be given a four years' course and much more practical work than they had now. It was not proposed to alter the theoretical part very much, but an extra year would be given in the workshops and the new mechanical engineering laboratory, and it was hoped in that way to turn out a good class of men.

72,487. It very often happened that a subordinate officer had practically the same qualifications as a provincial man and had only failed by a few marks. Under the new régime subordinates would not get the same training, as they would only have a three years' course. The training in future would be better for an upper subordinate than it was now because it would be more practical, but there would be a distinction between that training and the higher training given to provincal man. He was of opinion that recruitment to the Provincial Service should be direct.

72,488. He believed there was room for a college for the higher service in the Bombay Presidency as there were many openings now in Bombay and in the Native States surrounding or dependent on it for engineers apart from Government service. The Mysore Government were endeavouring to make a special arrangment with the Bombay Government to take an increased number of men from their State, and Baroda, Hyderabad, and the Central Provinces also sent their men to the college to be qualified as engineers. The country was too large to have one college for all India. There was room for two colleges or two separate courses taught in the same college, one for engineers and the other for overseers in Bombay as there were many openings for good engineers.

72,489. Candidates for the Provincial Service were recommended by him for appointment and he only recommended for each vacancy.

72,490. With regard to the suggestion in his written statement that the difficulty with regard to pay might be overcome by extending the period of apprenticeship of members of the Provincial Service and by appointing them assistant engineers, he wished now to withdraw that remark because on further consideration he did not think it would be found practicable. He had been told there was a strong feeling in the Provincial Service with regard to the differences in pay.

72,491. He would not go so far as to say that in years to come there would be room for a large increase

of Indians in the Imperial Service, but he had been led to think it would be so from conversations with members standing high in the Public Works Department.

72,492. He had not recently visited any English colleges or any of the other colleges of India, but in a general way he believed that the Poona college was well up to the average of the Indian colleges, and he believed the new syllabus would be as good as any on account of the fact that it was going to be practical.

72,493. (*Sir Murray Hammick.*) An apprentice was under probation for one year but he had never known of a man being turned out during this period. That was the only practical work men had before entering the service, except what they did in the college.

72,494. (*Mr. Abdur Rahim.*) There were two Muhammadan students in the college this year but very often there were none at all. There were no special scholarships for Muhammadans. The cost of the college course was between Rs. 400 and Rs. 500 a year, including travelling expenses. Candidates were selected according to their general qualifications. He preferred a man who had passed the Intermediate Science, but a great many who had passed the Intermediate Arts were admitted, and also some who had passed the Previous Examination, or had been only a year in the Arts college, if they were suitable men.

72,495. (*Mr. Madge.*) Europeans and Anglo-Indians as a rule went to Rurki because Rurki had been the best college and had laid itself out for Anglo-Indians. Perhaps Poona was not yet quite up to the Rurki standard.

72,496. Of the forty students who passed out of the college, three obtained guaranteed posts as upper subordinates and three or four entered Government service in other ways; the others went into outside employment.

72,497. The course had been divided chiefly from a consideration of the advantages of special training for the upper subordinates and of a better training for engineers. The four years' course was more expensive and it did not seem fair to put the expense on the shoulders of a subordinate.

72,498. (*Mr. Sly.*) He did not think that admission to the college or to the Provincial Engineering Service was restricted to statutory natives of India.

72,499. The selection of the first man on the list depended entirely on the final examination and not on a record of work throughout the course. The final examination was wholly theoretical except for drawing and the record of work done in the field.

72,500. There was no system in Bombay, as in Madras, of sending the students out for one year for practical training with private firms, and that would not be necessary in Bombay as there were larger openings for people to get their practical training after they had finished their college course.

72,501. (*Chairman.*) He did not think it made very much difference whether the marks were given on the final examination or on examinations throughout the general work of the course. As a matter of fact he believed that a very good man was obtained on the results of the final examination.

(The witness withdrew.)

At Bombay, Monday, 23rd February, 1914.

PRESENT:

The Right Hon. the LORD ISLINGTON, G.C.M.G., D.S.O. (*Chairman*).

The Earl of Ronaldshay, M.P.
Sir Murray Hammick, K.C.S.I., C.I.E.
Sir Theodore Morison, K.C.I.E.
Sir Valentine Chirol.
Mahadev Bhaskar Chaubal, Esq., C.S.I.
Abdur Rahim, Esq.
Walter Culley Madge, Esq., C.I.E.
Frank George Sly, Esq., C.S.I.

Herbert Albert Laurens Fisher, Esq.

and the following Assistant Commissioners:—

C. C. S. Clark, Esq., Secretary, Public Works Department, Central Provinces.
J. M. Vachha, Esq., Executive Engineer, Central Provinces.
R. J. Kent, Esq., Superintending Engineer, Bombay.
J. H. Advani, Esq., Executive Engineer, Bombay.

R. R. Scott, Esq. (*Joint Secretary*).

H. B. Learoyd, Esq., Executive Engineer, Central Provinces.

Written Statement relating to the Public Works Department, being a Memorandum of the views of a Meeting of the Civil Engineers Association held at Nagpur, Central Provinces, on the 27th July* 1913.

72,502. **(I.) Method of recruitment.**—[i] The present system of recruitment in England only is generally considered satisfactory. There is a disadvantage in recruiting Indians in England as it is not always the most suitable candidates who are willing and can afford to go to England. It is not considered that any particular proportion of Indians should be appointed in any one year. Selection should be left entirely to the Committee if composed as in paragraph 4.

[ii] One year's practical experience on works in Europe and some knowledge of accounts should be insisted on.

[iii] Only degrees which are recognised by the Institute of Civil Engineers as qualifying for their Associate Membership should be accepted.

[iv] The Selection Committee should consist of—

(*a*) A retired Lieutenant-Governor or Chief Commissioner as President.

(*b*) An eminent Engineer with considerable experience in England, preferably a past President of the Institute of Civil Engineers.

(*c*) An eminent Principal or Professor of an Engineering College of high standing in England.

(*d*) Two retired Engineers of the Indian Public Works Department, one of these to be a retired Indian Engineer.

(*e*) Two Indian Public Works Department Engineers actually in service, selected from the men who are at home on leave each year.

* Members of the Civil Engineers Association who were present at the meeting:—Messrs. R. H. Tickell, C. C. S. Clark, W. B. Starky, J. D. Thomson, E. A. Lugard, G. A. Phear, E. S. L. Beddy, A. Davison, A. E. Joyce, A. R. Pollard, P. Davies, G. S. Sneyd, and G. H. Forrest.

[v] The maximum age should not exceed 24 years.

[vi] Should the Government of India desire to appoint on the permanent scale any Temporary Engineer in its employ, it would, it is considered, not be unfair to all concerned that he should be brought into the service at such rate of pay as the Government shall deem proper in each case, and that he should receive increments in the same manner as an Engineer who has joined the service in the prescribed manner. Since the incremental scale of pay has been brought in, this would inflict little or no hardship on those already in the Department. The only chance of hardship would be if an officiating appointment were given to a Temporary Engineer, so appointed, to the exclusion of one who was on the permanent scale before he was appointed. Such cases would, however, be vary rare, unless the number of temporary men, so brought in, was unduly high. The employment of Temporary Engineers should be reduced to a minimum, as in many cases they hold Divisional charges, in which qualified Assistant Engineers would otherwise be officiating. Moreover it creates a discontented class of men, who have a very real grievance, in that whilst doing the same work as permanent Engineers, they draw no extra pay, and have very precarious prospects. It is also thought that no temporary man appointed in the manner prescribed above should ordinarily be given administrative rank before those who were in permanent employ before he was appointed, nor until he himself has put in at least 20 years' permanent service; in fact he should not ordinarily be allowed to attain administrative rank at all. This would prevent any feeling of discontent among those who have entered the service in the regular manner.

Royal Engineers should only count their service from the time they join the Department, whatever their military rank.

72,503. **(II.) System of training and probation.**—(i) The most suitable age for a young officer to arrive in India is 21 to 23 years.

(ii) On first arrival, it is desirable that a recruit should be posted to some station of considerable size, where he will have a certain amount of social amenities, and meet men of all ages. He would thus not become narrow-minded or discontented at the outset of his career; would not get an exaggerated idea of his own importance, but get a certain amount of polish.

(iii) It is felt that the present system of Departmental Examination is sufficient, and that Engineers appointed in England attain to an adequate proficiency in the Indian languages. The examination in reading native accounts might well be dispensed with, as the figures can be learned in a short lesson, and are afterwards soon forgotten.

(iv) The opinion of the meeting was strongly against any form of probation. No other department of the Government of India requires recruits appointed by the Secretary of State in England to undergo a period of probation. A proportion of bad bargains in every Department is inevitable. Really bad bargains can be got rid of under code rules if necessary.

72,504. **(III.) Conditions of service.**—(i) It is desirable that the Engineers of the Department be constituted into a service under some such name as "Imperial Engineers" (I.E.). The term Public Works Department is used by both subordinates and clerks, and consequently cannot be held to distinguish an Engineering Officer. This would only be following the lead set by other Departments, such as the Medical and Forest Services. It is felt that the table of precedence should be revised, so as to give Engineer officers an official status more in keeping with their importance to the prosperity of India.

(ii) All officers should be compelled to retire on attaining the age of 55 years without exception. The relaxation of this rule in recent cases has led to a large amount of discontent.

(iii) The rule which lays down that a Chief Engineer should not ordinarily be allowed to hold the same post for more than five years should allow of no exceptions.

(iv) The cadre should be arranged so that everyone can have furlough or privilege leave whenever it is due to him. Local Governments should be asked to frame their cadres 5 years in advance and keep them up to date year by year.

(v) An officer transferred from one station to another should be reimbursed the whole of his actual expenses incurred in transporting himself and his family, servants and belongings. Under the present rules, men with families are often severely crippled by the heavy expenses of a transfer. Some officers consider that this hardship could be best remedied by giving each officer on transfer a breaking-up house allowance equal to half a month's pay, in addition to the ordinary travelling allowances due under existing rules.

The present travelling allowances are far too low. They are based on prices as existing in India 50 years ago, when a cart could be obtained for Rs. 12 per month. They are with difficulty now obtained for Rs. 30 per month and the daily rate is usually Rs. 1-4-0. For road journeys the rate should be raised at least 50 per cent. and mileage should be drawn as soon as the number of miles travelled exceeds the equivalent of the daily allowance. For ordinary journeys by rail the present allowance is sufficient.

72,505. **(IV.) Conditions of salary.**—(i) The system of annual increments in salary meets with general approval.

(ii) Although salaries have recently been increased, it has to be borne in mind that the pay of Engineers is actually less in English money than was the case when Cooper's Hill was founded.

At the time Cooper's Hill was first founded the scale of pay for the rank and file of Imperial Engineers was fixed at—Assistant Engineer, 2nd grade, Rs. 350 up to Executive Engineer, 1st grade, Rs. 900, per mensem.

At that time these sums, respectively, represented £420 and £1,080 per annum. Even in 1883, when the rupee stood at one shilling and eight pence, they represented £350 and £900.

The pay of the newly joined Imperial Assistant is now Rs. 380 and of the Senior Executive Engineer Rs. 1,250 corresponding at the present rate of exchange to £304 and £1,000 per annum. But from these sums there are deductions on account of income-tax, which were not imposed until about 1885. The pay now, after deduction, amounts to only £296 and £974, respectively. Thus the pay given now, when measured by English money, is actually less than was considered fair 40 years ago. And in the case of newly joined Assistants less than they received 30 years ago, although it is admitted on all sides that the cost of living in India has nearly doubled.

Hence it would appear that when the salaries of the Public Works Department were readjusted they should have been raised to a level which would represent in English currency 50 per cent. more than they did when Cooper's Hill College was first founded.

As salaries have been so recently raised (in rupees, not in pounds) it would of course be useless to ask for any further increase now, but the above is pointed out in support of the recent memorials submitted for increased pensions.

(iii) The rule introduced in the Government of India's Resolution of the 15th May 1912 by which an officer cannot draw more than Rs. 800 per month under the system of annual increments till he is appointed to a Divisional charge, will bear very hardly on some officers, and should certainly be rescinded in the case of those officers who are reported on as fit for a Divisional charge. It is not right that the annual increments of an efficient officer, who is reported on as fully qualified for a Divisional charge, should be stopped, not on account of any fault of his own, but solely due to erratic recruitment.

(iv) Similarly, many Executive Engineers, reported on as fully qualified for administrative rank, will be unduly held back at Rs. 1,250 per month, merely because of errors in recruitment. There is a strong feeling that Executive Engineers, who are certified as fit for administrative posts, should have their pay increased beyond Rs. 1,250 per month by annual increments of Rs. 50 per month up to a maximum of Rs. 1,500 which they would thus attain after a minimum of 24 years' approved service.

(v) Promotion to Chief Engineer, 1st Class, becomes so badly blocked at present, that many specially deserving officers never obtain a chance of promotion to the higher rate of pay. It is felt that there should be only two classes of Superintending Engineer and one class of Chief Engineer, as for Commissioners of a Division in the Indian Civil Service.

The rates of pay of administrative ranks should be—

Engineers whether appointed in *England or not*—

	Per month. Rs.
Superintending Engineer, 2nd Class ...	1,750
Do. do. 1st Class ...	2,000
Chief Engineer	3,000

and a Secretary to a Local Government or Administration should get a local allowance of Rs. 250 in addition, as at present. The number of Superintending Engineers in the 1st Class should be the same as in the 2nd Class.

The pay of a Chief Engineer is often compared to that of a Commissioner. This is not a fair comparison as Commissioners can rise to higher posts and Chief Engineers have the charge of a large department.

72,506. **(V.) Conditions of leave.**—(i) The amount of leave allowed under the existing rules is generally considered sufficient, but it is sorely felt that it is impossible to take as much furlough as is desirable for proper health, owing to the smallness of the furlough allowances. The present allowance is barely a subsistence allowance for a junior officer, and leaves no margin for expenditure in attending professional lectures or visiting Engineering works. An officer, who is keen on improving his professional qualifications and bringing his knowledge up to date in European practice, is thus discouraged. At present the most junior Royal Engineer Officer in the Department gets a leave allowance, which a Civil Engineer can only hope to reach after eighteen years' service.

It is unanimously urged that the leave allowances should be revised so that an officer on furlough or special leave will draw half his substantive salary, subject to a minimum of £500 a year.

(ii) The opinion is also strongly expressed that it should be open to every officer to take all the privilege leave which he has earned, at any time during his service, when he can be spared. It is unjustifiable that an officer should be penalised because he cannot be spared, or because, in his keenness for his work, he may prefer to see his job through instead of applying for leave when three months' happen to be due to him. Privilege leave once earned is as much due as an officer's pay, and the rules should be framed in such a manner that it can never be lost to him.

(iii) Furlough cannot be taken till an interval of not less than 18 months has elapsed since last return from privilege leave of over six weeks' duration. This rule should be relaxed, as it discourages an officer from taking privilege leave in India, when it may be very necessary for his proper health.

(iv) A proposal which is unanimously urged is that an officer on furlough should be allowed to draw double furlough allowances for half the period of furlough which is due to him. For instance, that an officer with twenty months' furlough due to him should be allowed to take ten months' furlough on double the ordinary furlough allowances, and end up with no balance of furlough due to him, or to take any less period, say, six months, on double the ordinary furlough allowances, and end up with a balance of eight months (twenty months less twice six months) still to his credit.

He should also be allowed to take leave of any kind without restriction whenever he can be spared.

(v) It is felt that no useful purpose is served by the rule which lays down that an officer must have rendered eight years' active service before he can be granted furlough. It would be in the interests of the service to give a junior officer an opportunity of recruiting his health, or of renewing his acquaintance with the progress of his profession, by allowing him to take furlough after four years' active service.

(vi) Similarly, it is felt that private employment during furlough should not be prohibited, as it would give a keen officer an opportunity of gaining experience to the interests of the service.

(vii) Opinion is unanimous that the rules for the grant of study leave to officers of Scientific and Technical Departments should be extended to officers of the Public Works Department. Engineering is a progressive science, and it would be to the advantage of Government if officers were allowed periods of study in order to keep abreast of modern developments.

72,507. **(VI.) Conditions of pension.**—[i] The greatest grievance of the Department, and one which is sorely felt, is the totally inadequate pension to which officers become entitled on retirement under existing rules. The present pensions are actually less than they were forty years ago, and when the higher qualifications now required from men joining the service, and the general rise in the cost of living are taken into consideration, they compare still more unfavourably than the actual figures indicate. It is strongly urged that the memorials on this subject, recently submitted by a large majority of the officers of the Imperial Service, should receive early and favourable consideration. Numerous memorials on this subject have been submitted during the last six years, and the delay in the issue of final orders on the case has given rise to a considerable amount of discontent.

The Engineer appointed in England is expected to live in the same style as the Royal Engineer and the Doctor, and there is no reason why he should be able, on retirement, to arrange his home menage on a more economical scale than they. He claims equal treatment from Government in the way of pension.

[ii] Article 4 of the Civil Service Regulations lays down that an officer's claim to pension is regulated by the rules in force when he retires. In view of the delay in the issue of final orders on the memorials already submitted, it is urged that this rule should be held in abeyance in the case of those men who are compulsorily retired before final orders are issued.

[iii] The scale of invalid pensions is meaningless at present owing to the absurdly low maxima limits prescribed, and opinion is unanimous that the maxima limits, as laid down in Article 641, should be revised to agree with those shown in Article 474 of the Civil Service Regulations.

[iv] A large majority of the Engineers appointed in England consider that a family pension scheme should be started, and that Government should bear a portion of the cost. Pension has been officially laid down to be deferred remuneration, and consequently it is clearly the duty of Government to reimburse this deferred remuneration to his family in all cases when an officer dies before he has drawn it all in the shape of pension. The majority of men are willing to contribute $6\frac{1}{2}$ per cent. of their salaries towards a Family Pensions Fund, and it is felt that Government should also contribute an equal amount. With this datum, the amount of family pensions, payable in the event of an officer dying, shall be worked out on an actuarial basis, allowing 5 per cent. per annum compound interest. Bachelors would subscribe at the same rate as married officers with families, and as a set-off they might be allowed to make voluntary subscriptions to a Provident Fund, and receive 5 per cent. compound interest thereon. An alternative suggestion is made that Government should start pensions for families on the same lines as those at present in force for the Civil Service.

[v] Other departments might be communicated with to take similar action with regard to pensions.

72,508. **(VII.) Division of services into Imperial and Provincial.**—(i) It is undesirable to lay down definitely that certain fixed Divisional charges, or even a fixed proportion of Divisional charges, should be reserved for Provincial Engineers, as laid down in the Government of India Resolution of the 24th April, 1908. Provincial Service Engineers, being borne on the same list as Imperial Service Engineers, the appointments to Divisional charges should be by section only.

(ii) It is felt that, in the interests of efficiency, the proportion of the imported Engineers in the service should be for the present not less than 66 per cent.

(iii) It is considered that the Imperial and Provincial Services should be borne on separate lists as

in practically all other Departments until such time as members of the Provincial Service attain administrative rank, when they will be borne on the Imperial list.

Supplementary Memorandum by Mr. H. B. Learoyd.

72,509. **(VII.) Such limitations as may exist in the employment of non-Europeans.**—Under the present system, the Imperial Service is recruited only in England and the Provincial Service entirely in India. Non-Europeans, practically speaking, can only enter the Provincial Service. As a matter of fact during the 18 months from January, 1911, to June, 1912, 13 European Imperial Engineers were appointed in England and one non-European. As the Provincial Service is open to non-Europeans it does not seem desirable to alter this, especially as it is possible for a non-European to be appointed in England to the Imperial branch. There is no distinction between the Provincial and Imperial Services except in the matter of pay, and it is felt that statutory natives of India employed in their own country and under climatic conditions, to which they have been accustomed from their youth, should not draw the same pay as Englishmen appointed by the Secretary of State who have to work in a foreign land far removed from their relatives and friends, whom they can only visit at rare intervals at great expense, and in a climate notoriously trying to their constitutions.

72,510. **(VIII.) Relations of the service with the Indian Civil Service and other services.**—The relations of the service with the other services are generally satisfactory. It is felt that the Pubic Works should be a service in reality and not a Department. There is perhaps a tendency to rank Subordinate officers of the Department below subordinate officers of other Departments. For instance, an "Upper Subordinate" of the Public Works Department drawing a salary of Rs. 400 a month has neither the standing nor the dignity of an Extra-Assistant Commissioner drawing less pay. The one is a "Subordinate" and the other an "Officer."

MR. H. B. LEAROYD, called and examined.

72,511. (*Chairman.*) The witness, an Executive Engineer of the Jubbulpore Division, represented the Imperial Engineers of the Central Provinces and had been in the service for sixteen and a half years.

72,512. The present system of recruitment was generally considered satisfactory. There was no objection to the ten per cent. of Indians now recruited in England being recruited in India, but unless there was a residential college in India probably the present form of recruitment was the best that could be obtained.

72,513. He was in favour of two distinct branches: Imperial Engineers recruited in England and a Provincial Service recruited in India. The indigenous engineer ought not to be quite on the same lines as the imported engineer. He would not object to the Imperial and Provincial Services being abolished if appointments were made by selection to the higher posts and the difference in pay now obtaining between the services were continued. The European serving in India should be granted something in the shape of a foreign allowance. There was some dissatisfaction in the ranks of the Provincial Service. The Provincial Service officers were doing practically the same work as the Imperial officers, and he would be prepared to extinguish any anomalies that might exist provided there was a differentiation of pay between the foreign recruited officer and the officer recruited in India.

72,514. There were twenty-eight temporary engineers in the Central Provinces, and if any were taken into the permanent cadre they should be brought in at the bottom of the list. The same principle should be applied to the Royal Engineer. At present the Royal Engineer was allowed to count as much as two and a half years of his Royal Engineer Service and this brought him in senior to men of the same age than himself. There were five Royal Engineers at present in the service, but none had been recruited for a long time. Some of the temporary engineers might be regarded as more or less permanent men. Most of them were employed on irrigation works and buildings and roads, both in maintenance and construction.

72,515. A good deal of constructional work on roads in the Central Provinces was done by contract under the supervision of the department, but the department had to prepare all the estimates and measure up the work. The contracts were not the same as contracts in England, and no work was done by contract in that way.

72,516. He objected to a probationary period as it did not give a man security when he first came into the service. If a man proved unworthy there were always means by which he could be got rid of. A probationary period might affect recruitment, as a man would probably object to entering a service and being sent out to India on the understanding that if he was not suitable he would be sent back after a year.

72,517. All officers should be compelled to retire on attaining the age of fifty-five. There should be no exception even in the interests of the service, because extensions pressed very hard on other men. If there was any question as to men being suitable for employment at that age he would rather raise the age of retirement than have an exception to any rule.

72,518. With reference to the suggestion that an officer on furlough should draw half his substantive salary, subject to a minimum of £500 a year, it might very well happen that sometimes an officer would be receiving higher pay on leave than when on duty, but that frequently happened in other services, especially in the I.C.S., where an officer early in his service received more pay on leave than when working. He would not press absolutely for £500 a year, but there should be a minimum, as an officer who was forced to take leave on medical certificate in the first year or two of his service did not receive a living wage. He would not press for the adoption of any principle which enabled an officer to receive more pay on furlough than on duty. A good many officers were in favour of drawing double allowance for half the period of furlough, but personally he was not in favour of it, as it was possible that an officer at the end of twenty years would have taken far more furlough than he ordinarily would and it would count against his pension; it would also result sometimes in an officer on furlough receiving more than an officer on deputation.

72,519. The officers asked for improvements in salary, for a considerable increase in pension, and for a family pension fund to which Government subscribed. They did not press for an increase in pay as Government had given an incremental scale in 1908. What they desired most was an improvement in the pensions.

72,520. Increases in the cadre were required for permanent work. He knew nothing about the irrigation branch, but for work on roads and buildings the department was understaffed. The expenditure on works taken in hand during the last six or seven years was far more than before, and at present Assistants were doing Executive Engineers work and sub-divisions were being held by subordinates. A good deal of work had to be done in connection with estimates, and if contractors were employed a large staff would not be needed; but he did not think it was practical in the Central Provinces to employ contractors, because there were no large firms, and he doubted whether the Bombay and Calcutta firms would take up the construction of bridges or roads in the Central Provinces. Firms would tender for the supply of girders, but would not erect them. If they could be promised works amounting to some lakhs of rupees in some fixed centre they might be prepared to take contracts up, but at present the amount of work was very small and the work itself was very scattered.

72,521. (*Sir Murray Hammick.*) If the ten per cent. rule for the recruitment of Indians in England still continued probably Indians so recruited would have to be given the foreign allowance. It would be

awkward to have Indians recruited in England drawing the allowance and doing the same work as Indians recruited in India, but he did not see how it could be avoided.

72,522. He did not think that the payment of passages, to England and back would in any sense be equivalent to the grant of more pay on furlough. It would be much better to have a fixed minimum furlough allowance. The difficulty of an officer using up his furlough might possibly be met by only allowing him to commute up to six months, and it was no doubt better to have a number of short furloughs than a few long ones.

72,523. (*Sir Valentine Chirol.*) If the State considered it absolutely necessary in the public interest to keep a man on after the age of fifty-five he should be retained as additional to the cadre, but even then he would block promotion by holding a post which another officer ought to have. No doubt the State had full value out of a man by the time he had reached fifty-five.

72,524. (*Mr. Abdur Rahim.*) If a Superintending Engineer was kept on after fifty-five outside the cadre it would mean doubling the establishment.

72,525. There was dissatisfaction among provincial men with regard to the disparity of pay, and he did not see why that dissatisfaction should not be removed by granting the extra pay to the English recruited men in the shape of a foreign allowance. It was simply changing the designation, but he could not see why provincial engineers should object to it. Foreign imported labour was always paid more than indigenous labour. A Civil Engineer, doing exactly the same work as a Royal Engineer, received less than the Royal Engineer, though the difference in the pay was not so great as it was between the Imperial and Provincial Services.

72,526. (*Mr. Madge.*) Recruitment might be affected by a period of probation in India. It might happen that a man on coming out would find he was not fitted for the work and wished to go away, and in that case a period of probation would be of value.

72,527. Local Governments should calculate the recruits they required up to five years ahead and recruit accordingly, and he believed the principle of anticipating vacancies had been urged by the department.

72,528. He did not know very much about the supervision of contracts in England, but the supervision in India on the part of the department was very strict. The department prepared designs and estimates and supervised the work very carefully. He did not think a contract on the basis of an English contract would ever be possible in the Central Provinces.

72,529. The cost of living had increased largely in India and the pay of to-day was less than the pay of forty years ago.

72,530. (*Mr. Fisher.*) Twenty-four was the best age for men coming out to India; by that time students in the Universities in England would have obtained their academic training, though perhaps they would not have had any practical experience. He attached some importance to practical experience on works, which might now be given in India as there were a number of large works in the country. A man would get just as valuable experience on a project like the Sara Bridge as he would in England. He would not lay down any hard and fast rule that a man should have practical experience in England.

72,531. He did not favour a competitive examination for entry to the Imperial Service. There should be certainly some element of selection, but that selection might come before or after the examination.

72,532. The posting of recruits to a station of considerable size would not involve expense as some of the smaller stations were more expensive than the large stations, and a recruit had far more chance of seeing large works in the bigger stations.

72,533. In the Central Provinces most of the work was done by comparatively small contracts. He himself spent about seven lakhs a year on works, but the money was not expended on a given work in a given year; there was one large work going on now the total expenditure on which would be about seven lakhs, but only about two lakhs was being spent in the present year.

72,534. (*Mr. Sly.*) He was afraid he could not say anything that would justify the recommendation that when an Indian became a Superintending Engineer he should have the same pay as the Imperial Engineer.

72,535. While he was in favour of permitting an officer to take up private work during furlough in England he was not in favour of allowing that course when furlough was taken in India. One of the reasons for suggesting private employment in England was that the furlough allowances were so small that a man might be allowed to add to them, and another reason was that in private employment he could obtain some special knowledge that would be of value to his work in India. Study leave would not meet the second point as no allowances were paid beyond bare railway-fares.

72,536. In the Central Provinces direct recruits to the Provincial Service were appointed from Rurki; there had been cases of appointments from the subordinate service but that was not general, and they had been generally appointed towards the end of their service. He preferred the young, direct recruit, as the promoted man was hardly the class of man required. A period of service in the subordinate ranks was not a good form of training for the Provincial Service.

72,537. (*Mr. Chaubal.*) The value of selection was that it brought to light qualities that were not discoverable by examination. A man might be an excellent engineer but a very bad executive officer. The qualities which an engineering officer should possess might very well be ascertained by a selecting board before an examination, and he would have no objection to the selection of candidates before the examination.

72,538. (*Sir Theodore Morison.*) An Englishman who was serving in a foreign country, far from his friends, his associations, and his home, and had to send his children to England to be educated, naturally deserved something in the shape of foreign allowance. On the supposition that the Commission would recommend that the salaries in the Imperial branch should be raised by 25 per cent. on condition that the Indians in the Provincial Service also received the same pay, naturally the officers would prefer the 25 per cent. rather than remain on the present scale. *Qua* service it did not affect the officers whether the Indians were paid the same or not. The only ground on which it could be advocated that Indians should be paid less was that of the general financial interests of the State, that it was unnecessary to pay them more because they could be obtained for less, but that had nothing to do with the Englishmen in the service. The Imperial officers were not asking for a rise of pay; what they claimed was that if the Provincial pay was raised the Imperial Service should have a rise also.

72,539. (*Lord Ronaldshay.*) The Englishman in India paid taxes and he therefore had a certain interest in the economical administration of the various Public services.

72,540. A man could take furlough at the end of eight years when he would be drawing Rs. 660 and his furlough allowance would be half the average salary of the past three years, and in a way that was really a minimum furlough allowance. The point really was not that there was not a minimum, but that the minimum was not high enough. There was, however, no minimum for furlough on medical ceritificate, although the furlough counted for pension.

72,541. (*Mr. Clark.*) It was not possible for the class of contractors found in the Central Provinces to prepare estimates and drawings. The chief requirement in the Central Provinces was a permanent engineering staff. The sanctioned cadre was now forty-eight, including three for Central India, and the Central Provinces Government in their memorandum on the Public Works Department stated that sixteen additional officers were required besides a proportionate number of subordinate staff. Applications

had been made to the Government of India for more permanent engineers, but the increase had not been sanctioned. It was very important that the application should receive early attention.

72,542. (*Mr. Vachha.*) He did not know what the proportion of Indians at present in the service was, but he did not think there were too many in the cadre. He desired to recruit the Imperial Service in England because higher educational qualifications could be secured there. If it were possible to get in India public schools run on exactly the same lines as those in England he would be quite prepared to have recruitment in India.

72,543. The fact that European engineers appointed in India held a larger proportion of higher posts than European engineers appointed in England might be explained by the fact that Rurki was opened before Cooper's Hill and more Rurki men were appointed in earlier days.

72,544. Royal Engineers received more pay than Civil Engineers as they started on Rs. 420 as against Rs. 380.

72,545. There was no particular objection to men entering at the age of twenty-five, but twenty-four was a good age and would give a man thirty-one years' service.

(The witness withdrew.)

J. H. Sharpe, Esq., Executive Engineer, Central Provinces.

Written Statement relating to the Public Works Department.

72,546. *INTRODUCTORY.*—"The Provincial Engineer Service," as it is now termed, is a misnomer. It is in reality an integral part of the Imperial Service, with the sole difference that it is recruited in India. It has not come into existence as something new in the same way as the other Provincial Services of India; it has sprung out of an older service which originally constituted the Imperial organisation of the Public Works Service. That Service, indeed, represents Indian training and experience of half a century during which period its members, whether recruited in England or in India, were welded together in close union and their united hands guided from inception to fruition works of magnitude and importance such as were never before chronicled in India or even out of it. The achievements of the products of Indian Colleges of the past have naturally stimulated the efforts and ambitions of the later products of the present day; and to those efforts and ambitions must be attributed the persistent appeal for special treatment with which the Government of India have been approached in recent years.

The speeches of Sir William Muir of November, 1873, and of Sir Antony MacDonnell of November, 1900, extracts from which have figured so largely in the Memorials submitted by the Provincial Service Engineers, have brought into prominence the fact that the Rurki College of India has been recognised as one which imparts instruction, both theoretical and practical, up to the standard of any similar institution in Europe, and that the late Cooper's Hill College was never intended to affect in any degree the relations of the Government of India with the former Seminary. The Government of India Resolution No. 2112-G of 1892, introducing the Provincial Engineer Service, moreover, declared that except in the matter of pay, leave, and pension, "there shall be no distinction between the members of this service and those of the Imperial Service." Its members, unlike the members of the recently created Provincial Services of other Departments, perform the same duties and rise to the same positions as their Imperial confrères; and yet they draw reduced pay and emoluments exactly in the same way as the other Provincial Services.

The main problem before the Public Services Commission is—how to reconstitute the Imperial and Provincial Services of the Public Works Department so as to restore to the Indian recruited Engineers their original status and prestige and at the same time to bring the Provincial Branch of the Public Works Department into line with the Provincial Branches of other Departments. In order to arrive at a proper solution of this problem I would respectfully entreat the Royal Commission to accord full and sympathetic consideration to the methods of recruitment, system of training, and conditions of service suggested in the enclosed Memorandum. The Memorandum gives expression to the unanimous opinions of not only the so-called "Provincial" Engineers, but also the "Imperial" Indian Engineers of these Provinces, whether recruited in England or in India. In order to indicate how widely these views are shared by Indian Engineers I beg leave to give below the names* of the officers who have accepted the Written Statement herewith submitted.

72,547. **(I.) Methods of recruitment.**—It is desirable that all superior services should as far as possible, be modelled on the same lines as regards modes of recruitment, salaries, pensions, &c. (*vide* Main Head VIII). The superior service of the Public Works Department may be divided into two branches:—(A) *Imperial* for the higher executive and administrative appointments corresponding to the Covenanted Civil Service; and (B) *Provincial* for all the other executive appointments corresponding to the Provincial Civil Service.

The method of recruitment should be as described below.

A.—Imperial Service.—(i) The Imperial Engineers will be recruited partly in India and partly in England in the proportion of 2 to 1, that is to say, two-thirds of the number of vacancies in every year will be filled by recruitment in India and one-third in England. From the last Government of India Classified List (corrected up to 30—6—12) it would appear that out of a total of 203 Engineers recruited in India, 100 are Europeans and 103 Indians. There is no likelihood of Indians swamping the Department as the proportion of Indians and Europeans among the local recruits will be about equal and the total European element in the Imperial Service, including European officers drawn from England as well as those drawn from India, will always remain at a very high level.

(ii) The recruitment will be by means of an open competitive examination, which has always been the rule in the Indian Colleges and which was also the rule in the Cooper's Hill College for many years. There should be no nomination or selection in any form. Every candidate must produce certificates to show that he belongs to a respectable family and that he bears a good moral character.

(iii) There should be certain recognised Engineering Colleges and Universities in Great Britain and Ireland and in the Colonies, graduates or superior diploma holders from which (provided they are His Majesty's subjects) may be admitted to an open competitive examination held in London every year. Appointments will be made in the order of merit from the successful candidates to the extent of the number of vacancies during the year.

(iv) Similarly there should be certain recognised Colleges in India, graduates from which (including

* Indian Engineers recruited in England: Mr. A. B. Madappa Executive Engineer, Karun Division. European Engineers recruited in India. Mr. J. H. Sharpe, Executive Engineer, Hoshangabad Division. Indian Engineers recruited in India: (*a*) *Imperial*—Mr. R. Mitra, Superintending Engineer, Second Circle, Central Provinces: Mr. P. C. Lall, Executive Engineer, East Berar Division; Mr. J. M. Vachha Executive Engineer, Eastern Division; Mr. J. M. Ray Executive Engineer, Bhandara Division; Mr. M. Ramaya, Executive Engineer, Chanda Division; Mr. N. N. Mukerjee, Executive Engineer, Mahanaddy Division. (*b*) *Provincial*—Mr. B. C. Dube, Executive Engineer, Akola; Rai Sahib Prayagdas, Assistant Engineer, Balaghat; Mr. H. R. Tandan, Officiating Executive Engineer, Mandla Division; Mr. Sunderlal, Assistant Engineer, Jubbulpore; Rai Sahib Purshottam Razu, Officiating Executive Engineer, Yeotmal; Mr. Kanewarlal Jhanji, Assistant Engineer. (*c*) *Temporary Engineers*—Messrs. M. S. Murzaban, Shivadasani, Chowa Lal Pradhan, G. B. Chandiramani, N. C. Bhattacharya, and Jhandamal and Rai Sahib S. N. Bhaduri.

subjects of Native States) may be admitted to an All-India open competitive examination held in Delhi every year. Appointments will be made from the successful candidates in the order of merit to the extent of the number of vacancies during the year.

(v) The examinations held in London and in Delhi need not be simultaneous; the standards of both the examinations must be identical and they should be held about the same time. This will practically be a revival, in a modified form, of the old system of recruitment from Cooper's Hill and Rurki.

(vi) The age of the candidates should be not below 23 and not above 25. Those recruited in India will be made to serve a probationary period of two years in England and those recruited in England will serve a similar probationary period, partly in England and partly in India. This point is more fully dealt with in paragraph 72,548.

B.—Provincial Service.—(i) Provincial Engineers should be wholly recruited in India. Each Government will recruit direct from the Engineering College within the Province, or, in the absence of a local College, from the Engineering Colleges in the neighbouring Provinces, to which local students may be encouraged to go with a view to compete for the Public Works Services. Appointments should be made in the order of merit from the successful Engineering graduates to the extent of the number of vacancies during the year.

(ii) In order to give an opportunity to the successful candidates of the year to compete in the examination for the Imperial Service, the Provincial recruitment will take place after the results of the former examination are declared.

(iii) The Provincial Engineers will be placed on the same footing as the Provincial officers of other Departments and will be styled Extra-Assistant Engineers, similar to the Extra-Assistant Commissioners and Extra-Assistant Conservators of Forests. The present grades of Sub-Engineers in the Public Works Department will be entirely abolished and will merge into the class of Extra-Assistant Engineers.

General.—Any medical examination or other test which may be deemed necessary in order to ensure the fitness of a candidate for the Public Works Services must be held prior to the competitive examinations, after which there should be no further disqualification.

There will be no promotion from the Provincial Branch to the Imperial Branch; nor is there any necessity of having "Listed Posts" for the Provincial men, as they are not ordinarily intended to hold the higher executive charge of Divisions. In exceptional cases men from the subordinate ranks (Supervisors) may be promoted to Extra-Assistant Engineers, in the same way as exceptionally good Tahsildars are occasionlly promoted to Extra-Assistant Commissioners. Such promotion, however, should be an exception and not the rule.

There should be no class or race representation in the Public Works Services, Imperial or Provincial. If in the view of Government there are any backward classes whose advancement ought to be accelerated, special facilities in the way of scholarships may be given to them at the various stages of their education in order to enable them to qualify themselves for the Public Works Services in due course.

The constitution of the Public Works Services outlined above may be summarised thus:—

A.—*Imperial Service.*

(*a*) Imperial Engineers recruited by open competition in India.

(*b*) Imperial Engineers recruited by open competition in England.

B.—*Provincial Service.*

(*a*) Extra-Assistant Engineers recruited by open competition from the Engineering Colleges.

(*b*) Extra-Assistant Engineers promoted (in exceptional cases) from the subordinate ranks (Supervisors).

Absorption of the members of the present Provincial Service.—In the event of the above scheme being adopted, the officers of the existing Provincial Service should be placed under Class A, as they are already listed with the Imperial Engineers, their pay being two-thirds of the pay of the Imperial Engineers. The distinction in pay should vanish on these officers attaining to the executive ranks. The selection of an officer for the assumption of the higher executive charge of a Division must be regarded as a sure test of his equality with the Imperial officers. An officer so selected has to move freely among the District and Divisional officers and it is in the highest degree desirable in the interests of public service that he should receive the same pay and emoluments as an Imperial Engineer, so as to be able to maintain his dignity as the principal officer of the Public Works Department in the Division filling a high post of trust and responsibility.

Temporary Engineers may be recruited from qualified Engineering graduates, only in exceptional cases when the permanent staff is unable to cope with any sudden rush of work. They should be employed only in positions held by Extra-Assistant Engineers and in no case should they be put in charge of Divisions. In cases of emergency Divisional charges may be temporarily held by Extra-Assistant Engineers, but not by Temporary Engineers. As a rule Temporary Engineers should not be kept in service longer than five years, within which period it should be possible to strengthen the permanent service suitably so as to meet the permanent growth of work, if any, in the Department. Should at the present moment there be any Temporary Engineers who are qualified Engineering graduates or superior diploma holders and have now been working continuously for over ten years, and who in the opinion of Government are fit to be made permanent, they may be brought on the list of Extra-Assistant Engineers before new recruits are admitted.

There should be no limitation upon the employment of Temporary Engineers chargeable to Works, so long as the main provisions of the Public Works Department Code, Vol. I, paragraphs 795 and 796, are fulfilled. This will not add to the Establishment charges, Permanent or Temporary. Any expenditure on this head will be met from Works, and its existence, continuance, growth and cessation will entirely depend upon the works themselves.

72,548. **(II.) System of training and probation.**—As already stated the Imperial Engineers, after appointment, will undergo a course of practical training for two years on some large construction works. Those recruited in India will spend the whole period of their training in England and those recruited in England will spend the first year in England and the second year in India. The training in England will be conducted by a stipendiary Superintendent appointed by the Secretary of State, who will act under the Advisory Board consisting of one of the Indian members of the Indian Council as President and three members (all appointed by, and receiving an honorarium from, the Secretary of State) as follows:—

(1) One member of the Council of the Institution of Civil Engineers.

(2) One retired Engineer officer of the Public Works Department not below the rank of Superintending Engineer, and

(3) One Engineer officer of the Public Works Department of not less than 15 years' service on long leave in England.

The Superintendent will arrange to article each recruit under a professional Engineer, who will afford him every opportunity of training himself on large construction works.

The training in India for the English recruit will be arranged by the Chief Engineer of the Province to which he may be posted. It would be desirable to place him, if possible, in the hands of superior Indian Officers (Superintending Engineer and Senior Executive Engineer) so that he may work amidst Indian surroundings of a high quality, in the same way as the Indian recruit will be trained amidst English surroundings. In every case a report on the recruit's work during the year under training, briefly stating how he was employed and how far he has made use of his opportunities, will be furnished to the Government under which he may be posted. The recruits should be consulted as to the class of work on which they desire to be trained, and as far as practicable the training might be arranged in accordance with their inclinations.

During the period of training each Assistant Engineer may be paid a salary of Rs. 300 per month in the first year and Rs. 340 per month in the second year. A sum of Rs. 1,000 will be paid to each recruit from India to cover his passage and the premia he may have to pay to the Engineers to whom he will be articled and travelling expenses, &c. The recruit from England will be provided with a free passage to India as now, and will draw travelling allowances in India under the ordinary rules. The date of appointment to the Department will be the same for both classes of recruits, a month's time being allowed from that date to join the place of training. Within three years after the period of training is over each Assistant Engineer will be required to pass a Departmental examination in languages and professional subjects as laid down in the Public Works Department Code at present.

72,549. **(III.) Conditions of service.**—The conditions of service, salary, leave and pension will be the same for all Imperial Engineers whether recruited in India or in England. Those for the proposed new Provincial Engineers or Extra-Assistant Engineers will follow the lines laid down for the Provincial Civil Service.

The rule for retirement at 55 years should be rigidly enforced, no exception being made in any case. An officer considered unfit for promotion to Superintending Engineer may be asked to retire at any age between 50 and 55, provided he is given the full pension (*i.e.*, $\frac{30}{55}$ of average emoluments, *vide* Main Head VI).

As regards the rule (*vide* Government of India, P. W. D., Resolution No. 25 of 15th May, 1912) under which no officer can draw more than Rs. 800 a month unless he holds a Divisional charge, it should be made clear that an Executive Engineer already drawing more than Rs. 800 a month will not have his pay reduced under this rule in case there is no Divisional charge to which he can be posted.

The annual recruitment of Imperial Assistant Engineers must not exceed what is necessary to fill the casualties in the higher executive and administrative grades. In this way no more Assistant Engineers ought to be ripe for promotion than there will be room for in the executive ranks. The Sub-Divisional charges will be mainly held by Extra-Assistant Engineers. With a suitable readjustment of charges, both Divisional and Sub-Divisional, and with judicious decentralisation of authority, the bulk of the executive work should be performed by the Provincial Staff, the duties of the Imperial Staff being confined to the higher executive and administrative functions.

72,550. **(IV.) Conditions of salary.**—On the representations submitted by the Public Works Department officers the Secretary of State was pleased to sanction increased salaries on an incremental scale in 1908. For the present that scale appears to be adequate for the Imperial Service. If, however, after reaching the highest salary of the Imperial Service an Executive Engineer who is considered fit for promotion is not raised to Superintending Engineer grades within three years, he should be entitled to an annual increment of Rs. 50 from the fourth year, subject to the condition that the maximum salary thus obtained shall not exceed Rs. 1,400. The scale of salary for the proposed Provincial Engineers or Extra-Assistant Engineers should be made identical with that for the Provincial Civil Service.

The travelling allowance admissible on transfer is universally recognised to be inadequate. Actual expenses should be paid, limited to three times the railway fare or road mileage ordinarily allowed for touring. Actual charges for the carriage of furniture and personal effects should be allowed, subject to a limit of one wagon load by rail and 20 cart loads by road. Trainage of one trap and two ponies should also be made permissible.

72,551. **(V.) Conditions of leave.**—The Government of India have under consideration a scheme for the simplification and improvement of the leave rules of both the European and Indian services. They can, however, be still further simplified by having only one set of rules for all the services, Imperial or Provincial. It is recognised that climatic conditions may necessitate more leave in the case of Europeans than in that of Indians. But there seems to be no reason to suppose that, given equal opportunities, the Indians will avail themselves of the leave rules more freely than they have been doing hitherto, and that they will thereby put Government to extra expense. It is only in a real and pressing case of necessity that an Indian officer will take advantage of the better "Long Leave" rules, and the amount of long leave actually taken is not likely to undergo any substantial change. Any differentiation would, therefore, merely create discontent without leading to any corresponding gain to Government.

The leave allowances are altogether inadequate. The maximum was fixed in the old days when the salaries were poorer in comparison with the present scale. The leave allowances on furlough should be equal to half of average salary subject to a maximum of £800 if paid in England and Rs. 12,000 if paid in India for all services.

It is desirable to introduce two modifications in the leave rules which do not at present find place in the scheme under contemplation:—

(*a*) Privilege leave may be allowed to accumulate up to a maximum of 6 months.

(*b*) Furlough up to a maximum of 2 years in the whole service may be allowed on full pay in lieu of 4 years ordinary furlough.

It seems pretty certain that if these concessions are granted, no Indian officer will, save under very exceptional circumstances, take furlough for a longer period than 2 years in all his service

In counting leave towards pension there should be no difference between periods spent in India and out of India, *vide* Civil Service Regulations Article 408.

72,552. **(VI.) Conditions of pensions.**—The pension rules should be uniform for all Imperial Engineers whether recruited in India or in England. Those for the Extra-Assistant Engineers will follow the lines of the Provincial Civil Service.

The following should be the scale of pension for the Imperial Service:—

Ordinary Pension.

Years of completed service.	Scale. (60ths of average emoluments.)	Maximum limit. £	Rs.
10	20	133⅓	or 2,000
11	21	146⅔	or 2,200
12	22	160	or 2,400
13	23	173⅓	or 2,600
14	24	186⅔	or 2,800
15	25	200	or 3,000
16	26	230	or 3,450
17	27	260	or 3,900
18	28	290	or 4,350
19	29	320	or 4,800
20		350	or 5,250
21		380	or 5,700
22		410	or 6,150
23		440	or 6,600
24		470	or 7,050
25	30	500	or 7,500
26		540	or 8,100
27		580	or 8,700
28		620	or 9,300
29		660	or 9,900
30 and above		700	or 10,500

Special Service Pension.—An additional special pension of £40 or Rs. 600 for each year of completed service in the administrative grades.

The rate of conversion from English to Indian currency and *vice versâ* should be taken to be £1 = Rs. 15.

An officer should be allowed to voluntarily retire after 20 years' service.

72,553. **(VII.) Such limitations as may exist in the employment of non-Europeans.**—Under the present system the Indians as well as Europeans who have settled in India are practically shut out from the Imperial Service which is wholly recruited in England. When the admission was by open competitive examination from the Cooper's Hill College without any restrictions, Indian students of merit could go to England with some certainty of success. A few Indians did, indeed, get into the Imperial Service through its doors. But since the days of nomination the uncertainty has been so great that no Indian

student ventures to go to England with the definite idea of seeking an entrance into the Public Works Department. It is true that there is no distinction between the present Provincial Service recruited in India and the Imperial Service recruited in England except in the matter of pay. But there should be no insuperable barrier in the way of the Indian or the European settled in India who may try to secure the same pay and emoluments as the European recruited in England, provided that he proves his fitness in every respect.

The proportion of Europeans and non-Europeans admitted during a period of 18 months, into the Public Works Department, from 1st January 1911 to 30th June 1912, is exhibited in the following table, vide Government of India Classified List (excluding Bombay, Madras and the Railways):—

—	Royal Engineers.	Imperial Engineers.		Provincial Engineers.
		Appointed in India from Covenanted Temporary Establishment.	Appointed in England.	
Europeans ...	3	10	13	6
Non-Europeans	—	—	1	8

Out of a total of 27 Royal and Imperial Engineers appointed during a period of 18 months only one is an Indian, while among the Provincial Engineers the Indians represent only 57 per cent. On the whole, therefore, the position of the Indian Engineers is not such as to satisfy their legitimate aspirations. Europeans and non-Europeans should be freely admitted into the Imperial Service.

The Indian Engineering College of Rurki which is the oldest institution of the kind in India was founded in 1848. Not till about *sixty years afterwards* was an Indian officer recruited from that College given a trial in the administrative grades. Even now the number of Indians in these higher ranks is very few. Greater and more liberal opportunities should be given for entering the higher spheres, and steady and sympathetic effort must be made towards testing efficiency in the actual administration of the Department instead of showing any tendency, real or apparent, to assume unfitness without a fair and unrestricted trial. The soul of grievance lies in the fact that the non-European is not allowed an equal chance with the European, and not in the mere preponderance of the European element in the Department.

72,554. **(VIII.) Relations of the service with the Indian Civil Service and other services.**—All Superior Indian Services should, as far as possible, be modelled on uniform lines as regards modes of recruitment, and conditions of service, salary, leave and pension. A good deal of jealousy and discontent has arisen in the past on account of undue differentiation in this respect. It is recognised that the Indian Civil Service, which is the premier service of India and which supplies Government with officers of the highest ability and attainments for the general administration of the country, should receive exceptional treatment. With this reservation, all services should be constructed and maintained alike.

In all attempts at reorganization either in the Public Works or in any other Department, the process has invariably been one of levelling up and never of levelling down. Officers of one Department naturally aspire to the higher salaries and allowances paid in other Departments and even the dignity visible in other cognate services leads to discontent among the members of the less favoured Department. Witness the case of the "Upper Subordinate" of this Department who is not really drawing very much less pay than officers performing similar functions in the other Departments; yet he is discontented because he always remains a "Subordinate" even though he may be drawing Rs. 500 a month, whereas one drawing even Rs. 200 per month in the Provincial Civil Service and not holding any higher charge is classed as an "Officer"—an Extra-Assistant Commissioner. What the Public Works "Upper Subordinate" wants is not higher pay and emoluments so much as greater dignity and importance in the eyes of the public.

A state of affairs such as this is not calculated to promote either economy from the point of view of Government or contentment and harmony from the standpoint of the services. A serious attempt must therefore be made to equalize the conditions of service in all Departments as far as may be practicable so as to extinguish all feelings of jealousy and to silence discontent.

72,555. **(IX.) Other points.**—(i) *Participation in the new Rules.*—The present generation ought to participate in any improved rules regarding admission into service, pay, pension, etc., that may be recommended by the Royal Commission and it is hoped that an early decision will be reached on those recommendations. As regards pension particularly, it is only fair that officers who have been urging so long for better pension and who have been told to await the result of the deliberations of the Royal Commission should have the benefit of the new rules with retrospective effect even though they may retire by the time these rules are brought into force.

(ii) *Expenses of an Indian Officer.*—It is erroneous to suppose that the expenses of an Indian officer are, generally speaking, less than those of a European officer. The European society and the Indian society are differently organised and the accumulation of centuries has no doubt created dissimilarity of tastes and ideals; yet the channels of expenditure, under the new conditions of life, are as many and as varied in the case of the Indian officer as in the case of the European, even though they may not all flow in the same directions.

The Indian members of the superior services are rapidly adopting the European mode of living. An Indian officer has, indeed, all through his service to keep up a double establishment; for although he and his wife may mix with the European freely, they cannot possibly forsake those of their Indian friends and relations who have not advanced so far.

Unlike the European, an Indian officer has to support his family, not infrequently a large one, from the date he joins the first appointment. The recent rise in prices in India which it is believed is proportionately higher than in England, affects an Indian perhaps more severely than a European in the first years of his service.

Unlike his European confrères, an Indian has to support, besides his own family consisting of parents, wife and children, a large number of collaterals (brothers, widowed sisters, daughters, etc.). These dependants go on increasing as the officer advances in age. It seems unnecessary to enter into the ethics of the question here. Facts must be taken as they are, and it cannot be denied that the Indian officers have, as a rule, to spend on this head of expenditure far more than they are known to spend on their own personal comforts and social obligations and amenities.

Parents in India have begun to realize the importance of giving their children the benefits of English education and travelling abroad. The expenses incurred by Indian officers of the superior services in connection with the up-bringing of their children are thus growing daily and approaching those borne by European officers.

(iii) *Relations between European and Indian Officers.*—Taking the Department as a whole the relations between European and Indian officers are happily not wanting in cordiality. Any detailed inquiry into this subject must be deprecated. At the same time it seems necessary in the interests of good government that the matter may be frankly and firmly yet gently dealt with. To leave his point out of consideration would be to leave the essence of the whole problem before the Royal Commission untouched.

Endeavour must be made to establish, if possible, a more harmonious and sympathetic connection between the two classes of public servants. Time, education and co-operation are slowly but steadily pulling down the barriers and the day is perhaps not far distant when the members of the European and Indian communities whom Providence has in His wise dispensation brought together for the fulfilment of His divine ends will mingle freely in all paths of life, both social and official.

The time has indeed come when Government might consider seriously whether European and Indian officers should not be encouraged in every possible

manner to come more intimately into contact with each other so as to understand each other better, and cultivate closer, healthier and more friendly relationship with each other. Where free social intercourse is not practicable, mutual visits and exchange of ideas on matters of common interest might be systematically fostered. Indifference or lukewarmth in this respect must be viewed with disfavour and any gross act or behaviour leading to a serious breach of cordiality on the part of either the Indian or the European should be regarded as a stumbling block to promotion.

Imagine a young Indian officer full of devotion to the Throne and of zeal for his country joining a district far away from his home and his early associations. He calls on all the European officers, he is received with varying degrees of coldness, and no one returns his call. Other European officers join the district, they call on their European colleagues, but not on him. He meets them as strangers, receives no sympathy and is not treated as their equal. The same story repeats itself in other districts. The young mind is unhinged and embittered and the bitterness clings to him all his life. The unhappy and uncongenial surroundings engender discontent and crush all initiative out of him.

The picture, though imaginary and depicting cases of more or less exceptional occurrence, is not overdrawn. A woeful picture such as this—even a solitary one—should not, if possible, be allowed to hang on the walls surrounding the official life of the Indian youth whose mind is stored with sentiments of profound gratitude and ardent loyalty to the British Throne and whose heart has been stirred to its innermost depths by the gracious message of Hope and Sympathy from his Beloved Sovereign.

Mr. J. H. Sharpe, called and examined.

72,556. (*Chairman.*) The witness was an Executive Engineer at the Central Provinces and represented the Provincial service. He was recruited from Thomason College, Rurki, and was now in his thirteenth year of service.

72,557. His colleagues proposed the abolition of the division into Imperial and Provincial branches and suggested the constitution of a new Imperial service recruited by competition in India and in England, two-thirds being recruited in India and one-third in England. He had statistics to show that if that method was adopted, even after twenty years the proportion of Indians to Europeans would be as one to two. Indian training was quite as good as the training to be obtained in England, but he did not think it was superior. He looked at the matter purely from an engineering point of view and not from the point of view of candidates prior to their entering an engineering college, but probably the earlier education would also have to be taken into consideration. He believed a competitive examination in England would lead to more students coming forward and a better class of students than was obtained at present. The subjects necessary for a competent engineer could very well be tested by a competitive examination. At present many students did not go in for the Public Works Department because they thought they had no chance of being nominated owing to want of influence, though he did not wish to say that any favouritism was shown by the selection board. There should be no form of selection.

72,558. Under the proposed scheme there would be no promotion from the lower branch to the higher. A subordinate after a certain number of years' service would probably make an efficient officer for executive work but not for administrative posts. At present they came in so late that they could not rise to higher than executive positions. The Provincial recruitment should take place after the results of the examination for the Imperial service were made known, so that those who did not succeed in entering the Imperial service would be able to go into the Provincial service. He did not think they would object, as they would have found out they were not as good as the men who had succeeded in getting into the higher service.

72,559. He suggested a two years' training in England for Indians so as to broaden their views. There would be no difficulty in finding works in England where officers could spend their leave if the Secretary of State paid a premium.

72,560. He did not recognize the principle that an officer recruited from Europe should have compensation in the form of foreign allowance when serving out of his own country, and he himself would be prepared to serve in a foreign country provided his pay was the same as the engineers of that country were receiving. Probably the pay in India would not be sufficient for a man in Africa if the man in Africa were getting higher pay.

72,561. He had no details with regard to allowances on transfers. At present officers received double first-class fare, which did not meet one-tenth of the cost.

72,562. (*Lord Ronaldshay.*) The written statement was agreed to by six members out of fourteen in the Provincial service. A copy was sent to every member but eight did not reply. It was not correct to say, as was said in the written statement, that it was the unanimous opinion of the service, and that paragraph should be deleted. He believed, however, that the other eight officers would agree generally with what was said.

72,563. (*Sir Theodore Morison.*) The number of men required every year was about forty, which would mean that the recruitment in India would be about twenty-seven under the proposed scheme, and he thought that number could be found, not from Rurki alone but from the other engineering colleges as well. At present the competition to enter service was very keen and there were far more candidates than vacancies.

72,564. The real complaint of the officers was in the smallness of the pay of the Provincial Engineers. An engineer was paid much better by private firms than by the Government. There was no real market rate for an Indian engineer in India. The first man in the list did not always enter the Provincial service. The competition to enter the service was probably due to the hope that after they had entered they would get something better than the present Provincial salary.

72,565. (*Mr. Chaubal.*) He had received no expressions of dissent from any member of the Provincial service to the opinions expressed in the written statement, and he did not think there were any proposals in the statement which prejudicially affected the interest of the officers.

72,566. The fact that there were many applicants for posts in the Provincial service was not a real test of market value. Probably if the present salaries were halved there would be applications just as there were now.

72,567. If a foreign allowance was given to imported engineers it was only logical and in the interest of the State that a larger number of Indian engineers should be employed.

72,568. (*Mr. Sly.*) The written statement was circulated to all the members of the Provincial service including promoted subordinates, but no replies were received from the latter. He did not think promoted subordinates would agree to the proposition that there should be no promotion from the subordinate service.

72,569. He passed out from Rurki in 1901, but as he had no knowledge of the present recruits from that college he was unable to make any comparison of them with the recruits of the past. The reason why the number of Europeans entering Rurki was now smaller than formerly was that the college had been closed for recruitment to the Imperial service. If it were opened again for that service a large number of Europeans would enter. Recruitment from Rurki was made on the basis of a continuous record of marks throughout the whole college career, but he thought an open competitive examination would be a much better system.

72,570. The officers in the lower branch of the proposed new service would hold charge of sub-divisions. The sub-engineering grade would be converted into extra assistant engineers. The new service would

consist of the existing cadre of sub-engineers and some men appointed from the colleges. He did not think there was any objection to the use of the term assistant engineers.

72,571. (*Mr. Fisher.*) He had one Anglo-Indian sub-divisional officer under him who had been trained at the Crystal Palace, but the majority of Provincial engineers were trained at Rurki.

72,572. He thought it would be a wise plan to put English recruits under superior Indian trained officers because they would more quickly understand how to deal with Indian subordinates. An Indian trained officer naturally understood native subordinates better than an officer recruited from England.

72,573. (*Mr. Madge.*) The fact that the written statement had been agreed to by Imperial, Provincial, and temporary engineers gave it greater weight than if it came only from one section.

72,574. The Indian Civil Service, in virtue of the peculiar position it held in the country as the premier service, required certain qualifications in connection with its earlier education which were not needed in purely professional services.

72,575. He proposed to exclude Provincial men from promotion to the higher branch, believing that it would tend to lower the status of the Imperial service, and the men would have already had an opportunity of getting in by sitting for the competitive examination.

72,576. If Government thought that a temporary engineer, after about ten years' service, was qualified for a permanent billet, he could be appointed for the Provincial service.

72,577. (*Mr. Abdur Rahim.*) If the engineering training in India was adequate then recruitment ought to be from India rather than from England; and even if the training in England was superior to that in India he should still take up the same attitude, because an Indian trained engineer would understand his subordinates better than a man from England. It was also necessary for the development of the country that Indian training should be encouraged. If the principle was adopted that because education in England for various departments was superior to that in India and that therefore recruitment must be more largely from England than from India, it would result in recruitment in India never being larger than it was at present.

72,578. It might be necessary for certain reasons to have a preponderating element of Englishmen in the administrative ranks, but it did not follow that it was necessary in the executive ranks. He did not agree, however, that there should be a large element of Europeans in the administrative grades and Indians should have a chance of being promoted if found fit for administrative rank.

72,579. If the bulk of recruitment was from India Indian engineers should be paid according to their market value, and any Englishmen employed should be paid according to the market value of an engineer in England.

72,580. (*Mr. Clark.*) He did not think that if the principle of a foreign allowance was applied generally to all services in India it would be more acceptable to Indian recruited men than the present arrangement.

72,581. (*Mr. Vachha.*) An Indian-recruited officer in the Imperial service should be paid the same as an English-recruited man because he had to keep up the same style of living. Also if the pay was the same a better class of officer would be obtained.

72,582. He did not think the preliminary education of an English school was of much value for service in India and he did not consider English-trained engineers were superior to Indian-trained engineers.

(The witness withdrew.)

C. S. C. HARRISON, Esq., Executive Engineer, Pravara Canals District, Bombay.

Written Statement relating to the Public Works Department.

72,583. **(I.) Methods of recruitment.**—(i) *Establishment of a special Training College.*—The Imperial Engineers as a body consider that a residential College on the lines of the late Royal Indian Engineering College, Coopers Hill, should be established in England from which Imperial Engineers for the Public Works and Railway Departments should be recruited.

There is practically unanimous opinion that the training which such a College would afford would foster an "*esprit de corps*" which cannot possibly be obtained under the existing methods of recruitment. Such a spirit and the qualities it engenders are of the utmost value to the individual, to the Department, and to Government.

(ii) *Constitution of the Selection Committee in England.*—Should it not be deemed possible to establish a residential College there appears no alternative but to adhere to the selections of qualified Engineers from the open market.

Should this course be followed the Imperial Engineers strongly urge that at least 50 per cent. of the members forming the Selection Committee should be Senior Officers of the Public Works and Railway Departments either on the active or retired lists, as it is felt that the intimate knowledge of these Departments and their requirements possessed by such officers would be of much value in assisting the Committee in their selection of the right class of man.

It is considered essential that the possession of the qualities of a gentleman be given particular prominence at the time of selection.

72,584. **(II.) System of training and probation.**—(i) *Training.*—It is suggested that it should be made a condition of appointment that recruits should have had at least one year's practical experience on Engineering Works in the British Isles, in addition to an adequate theoretical training.

This latter training is assured by the present academical requirements as at present laid down by the existing rules of selection, but the question of practical experience requires greater attention.

It is considered that the practical course should be such that the selected candidate will have had the opportunity to study, practically, the difficulties encountered on such works as the construction of dock and harbour works, water-supply to towns, large sanitary schemes, erection of masonry and steel bridges, and railway construction works.

Special mention is made of these classes of works because many candidates put in their practical course with firms who specialize highly. In such cases little valuable general experience can be obtained, whereas such *general* experience is essential to the Indian Engineer who, by the nature of service in India, has to deal with all classes of work.

(ii) *Probation.*—It is considered that if the Selection Committee at Home pay particular attention to the academical qualifications combined with the nature of practical experience undergone by the candidate, a period of probation in India is not necessary.

It is considered that the question of social qualifications should be treated as very important.

High academical distinction is not the sole desideratum for service in India. It is an unquestionable fact that the Native of India will give greater respect to a real gentleman or, as he generally puts it, a "pacca Sahib," than to an officer wholly or practically devoid of those traits that go to make the "English Gentleman."

72,585. **(III.) Conditions of service.**—(i) *Revision of the Permanent Cadre.*—It is urged that the cadre of the Permanent Engineers should be more frequently revised than has been the case in the past. It is advisable that the number of Permanent Engineers should more closely accord with the number of permanent appointments and that less reliance be placed upon making up deficiences by the employment of Temporary Engineers. In support of this suggestion attention is invited to paragraph 306 of the Report of the Irrigation Commission of 1901, which, though recorded in connection with the Irrigation Branch, applies equally to all branches of the Service.

(ii) *Appointment of Royal Engineers to the Department.*—The conditions under which Royal Engineers

are drafted into the Public Works Department have in the past, and are liable to again in the future, affect adversely the position and prospects of Civil Engineers.

Royal Engineers brought in are usually credited with extra departmental service to such an extent as to give them departmental seniority over Civil Engineers who are senior to them in age and of many years standing in the Departments

The effect on a Civil Engineer thus superseded is utterly disheartening; if senior, his promotion to administrative rank is retarded, or he may even be prevented from ever reaching administrative rank, and, if junior, it may result in delaying him from being placed in a Divisional charge.

Whatever form it may take the frequent result is to subject him, at one time or another, to a heavy pecuniary penalty.

It is recognised that it is necessary in the interests of Government, that employment should be found for Royal Engineers in the Departments, but it is strongly urged that in justice the appointments should be made in such a manner as not to impair the prospects of Civil Engineers of the same age already serving in the Departments.

(iii) *Transfer of Temporary Engineers to the permanent scale.*—It is likewise urged that if Government transfer any Temporary Engineer now serving in the Departments to the permanent establishment the same guiding principles should be observed to safeguard the prospects of officers already on that establishment, as in the case of Royal Engineers.

(iv) *Future appointments of Temporary Engineers* should only be made on the specific understanding that the holders of the same will not, under any circumstances, be brought on to the permanent scale. It remains with Government, if it is considered expedient, to improve the Temporary Service as such. Thus the improved provident fund for temporary employés in State Railways might be extended to all Temporary Engineers in the Public Works Department and that, should circumstances so occur that their services will be required for some considerable period, they be allowed to take combined leave up to a period of six months.

(v) *Compulsory retirements.*—Article 649 of the Civil Service Regulations which provides for the compulsory retirement of Civil Engineers who, on attaining the age of 50 years, have not been promoted to the rank of Superintending Engineer should, it is considered, be more rigidly enforced in the case of officers who, on reaching that age, are reported as not qualified for promotion to the rank of Superintending Engineer.

It is also recommended that an officer who is reported on as inefficient during three successive years be compulsorily retired, irrespective of length of service. It is considered that in such a case a suitable bonus, less than what an efficient man might expect to get (but would not get because it would not be offered to efficients) should be given. The actual bonus to be given would require mature consideration but it is suggested that it should take some form of a percentage contribution by Government to the sum contributed to the Provident Fund by the officer.

This suggested bonus would of course only apply to cases where pensions had not, under existing rules, become due. In the case of an officer being compulsorily retired after he has earned a pension Government would consider what proportion of the pension should be given.

(vi) *Observation of the principle laid down in P. W. D. Code, Vol. I, paragraph* 80.—It is recommended that the principle laid down in paragraph 80, Volume I of the Public Works Department Code, namely, that promotion to the Administrative Ranks should be by a system of selection as opposed to that of seniority, be more closely followed than at present.

72,586. **(IV.) Conditions of salary.**—*Present scale of pay.*—In 1908 the scale of pay of the Public Works Department was reorganised and placed on an incremental basis, but at the same time the exchange compensation formerly given to officers was withdrawn. While gratefully acknowledging the small net increase that has accrued from the recent reorganization it is very strongly urged that the Imperial Engineer is still very inadequately paid.

The net increase in emoluments under the new scheme is not commensurate with the increased cost of living in India which has been so marked a feature of the last decade, and greatly increased responsibilities.

In paragraphs to follow, proposals are advanced for the improvement of furlough and pension allowances, which will serve to alleviate some of the hardships which are most severely felt, and in the belief that these proposals cannot fail to receive favourable consideration, no specific suggestions regarding the improvement of the scale of pay generally, are now put forward. If after careful consideration of the question in regard to other Departments or services, the Royal Commission consider that the increased cost of living deserves an increase in the salary as at present drawn, the Imperial Engineers urge that they should participate in any such general improvements as the Commission desire to recommend.

It is also suggested that there should be more liberal treatment of the cases of officers who are subject to individual hardships through the exigencies of the service.

A case in point is the granting of a special allowance to officers who have to serve in isolated places. They are cut off from many of the amenities of life which are enjoyed by others more favourably posted.

This particular hardship generally falls on the more efficient officers for, on account of their efficiency, they are selected for special work which, especially in the case of irrigation schemes, entails their sojourn in lonely places.

The following cases of individual hardship which may arise owing to irregularity of recruitment are brought to notice, and suggestions put forward for their mitigation:—

(i) Under the reorganization scheme of 1908 it is ruled that an officer may not draw more pay than Rs. 800 per month unless he is in charge of a division, or in a charge which, in the opinion of the Local Government, is of equal importance. This is unjust to an officer who, though fully qualified, does not obtain a divisional charge simply because there is no vacancy for him.

It is strongly urged that the rule should be amended to the effect that an officer of the Imperial service reported fit to hold a divisional charge, should continue to receive the ordinary increments laid down in the scale, irrespective of his being in actual divisional charge.

(ii) Under the reorganization scheme Executive Engineers attain their maximum pay of Rs. 1,250 per mensem after 19 years' service. It is urged that if, on account of there being no vacancy, an Executive Engineer, though otherwise qualified, is not promoted to Superintending Engineer's rank on completion of 22 years' service he should receive a personal allowance of Rs. 150 per mensem, until such time as he is promoted to administrative rank.

The existing pay of Chief and Superintending Engineers is deemed wholly inadequate. It is felt that the work and responsibilties of these officers has increased greatly of recent years and out of all proportion to the increase granted in their pay.

The pay of a first class Chief Engineer is less than that of a Commissioner of a division and, whereas the area over which the latter exercises control constitutes only a small portion of a Province, the responsibility of the former extends over a whole Province. The number of Chief Engineerships throughout the whole of India is small and, with the exception of the post of Secretary to the Government of India in the Public Works Department and that of Inspector-General of Irrigation, they are the only highly paid posts to which an officer of the Public Works Department can hope to attain. On the other hand there are a number of Commissionerships in each Province in addition to many other high offices, both with Local Governments and with the Government of India which fall to the lot of officers of the Indian Civil Service.

As regards Superintending Engineers, it may be pointed out that the highest class in that rank draws less than does a Senior Collector.

The above arguments apply equally to the Superintending Engineer ranks and it is strongly urged that an increase of pay in all classes of the Superintending Engineer grade is absolutely necessary.

The proposals put forward are:—

Chief Engineers:

Only one class	...	Pay Rs. 3,000	per mensem.
Allowances ...	...	,, 500	do.

additional for the post of Secretary to Government and Rs. 250 per mensem for the post of Joint Secretary to Government.

Superintending Engineers:—

Class I	... ...	Pay Rs. 2,500	per mensem.
Class II	... ...	,, 2,000	do.
Class III	... ...	,, 1,750	do.

Secretary to Government of India in the Public Works Department.—For similar reasons as in the foregoing, it is considered that the duties and responsibilities attaching to the post of Secretary to the Government of India in the Public Works Department, which appointment is invariably held by an officer specially selected from among Chief Engineers, and usually of much longer service than any other Secretary to the Government of India, warrant the appointment being paid at the same rate as Secretaries in the Home, Finance, and Commerce and Industry Departments, *viz.*, Rs. 4,000 per mensem.

72,587. **(V.) Conditions of leave.**—*Furlough.*—The amount of furlough, which Imperial Officers of the Public Works Department appointed in England can earn is generally considered sufficient. The rules governing the grant of furlough are practically identical with those which apply to the Indian Civil Service and Military Officers subject to Civil leave rules, except in the most important particular of leave allowances. In the case of officers of the Indian Civil Service and Military Officers under Civil leave rules, furlough allowances are subject, if paid at the Home Treasury, to a minimum limit of £500 per annum, or the salary last drawn whichever is less, and to a maximum limit of £1,000 per annum; whereas for Civil Engineer Officers of the Public Works Department there is *no* minimum limit and the maximum has been fixed at £800 per annum. The present furlough allowances permissible to Imperial Civil Engineers are as follows:—

Years of completed service.	Maximum furlough pay.	Years of completed service.	Maximum furlough pay.
	£		£
8	279	19	517½
9	297	20	540
10	316½	21	555
11	337½	22	562½
12	360	3 years as Superintending Engineer, 3rd Grade.	675
13	382½		
14	405		
15	427½	3 years as Superintending Engineer, 2nd Grade.	787½
16	450		
17	472½		
18	495	Thereafter ..	800

As long ago as 1870, in Despatch No. 43-P. W., dated 28th March, the Government of India said:—"*Section* 16.—With reference to paragraph 4 of Your Grace's Despatch under reply, we may remark that we have already recommended the equalization of the pay of the Military Branches of the Department, and we are gratified to find this proof that Her Majesty's Government are likely to receive that proposal favourably. On this point we only add that we shall be glad to see some plan adopted by which the furlough allowances of Civil Engineers shall be equalized with those of Military Officers in the Public Works Department and, so far as practicable, the advantages of pension also." This hope has been reiterated many times by the Government of India and by different Secretaries of State since the date of that despatch. It is, however, a hope that remains unrealized up to the present day, since a Royal Engineer in the Public Works Department, with 8 years' service to his credit, is entitled to almost double the furlough allowances of a Civil Engineer officer doing exactly the same class of work and having the same service in the Department. A Civil Engineer is obliged to complete 18 years' service before he can claim an allowance approaching that which a Royal Engineer is entitled to after 8 years' service.

The present allowances are so inadequate that a large majority of officers cannot avail themselves of the furlough due to them, even though the state of their health urgently demands that they should do so. That such is the case is assuredly not in the best interests of the general Administration. The question of leave allowances is raised in the last paragraph of the memorials recently submitted by officers of this Department; copies of which are attached to this Memorandum as Appendices 2 and 3. The reply given to the memorialists by the Government of India was that:—"... Pensions and leave are subjects of reference to the Public Services Commission, and as no doubt the Commission will enquire into these matters and submit recommendations, the Government of India consider that no useful purpose will be served by considering the prayers of the memorialists at this stage.*"

Under the circumstances it is confidently hoped that the Royal Commission will be able to recommend that the leave allowances sanctioned for officers of the Indian Civil Service, and Military Officers subject to Civil leave rules, may be made applicable to Civil Engineer Officers of the Public Works and Railway Departments on the Imperial lists. There is no valid reason why they should receive less favourable treatment than the other officers named. It is pointed out that feeling on this question is very strong, and that communications received from officers of the Department show that there is great discontent throughout the Department regarding the inadequacy of leave allowances.

It is urged that where the allowances are drawn in India they should be paid in the equivalent in rupees at fifteen rupees to the pound sterling.

(ii) Furlough earned by an officer should be granted at any time after the completion of eight years' service, subject to the exigencies of the service, unless the applicant has returned within eighteen months from privilege leave covering a period of three months.

Special leave.—The existing rules regarding the grant of special leave require no alterations, but the allowances should be the same as in the case of furlough.

Privilege leave.—(i) Under the present rules an officer can earn privilege leave to the extent of one calendar month for every eleven complete calendar months of duty, and such leave is cumulative up to a period of three months only. In the case of officers who have accumulated the full period it frequently happens that the exigencies of the public service prevent their being granted privilege leave when they desire it, and this leads to the leave lapsing through no fault of their own. It would in a measure mitigate against this loss of leave on full pay which an officer has fairly earned, if the cumulative period were extended from three to six months.

(ii) An officer should be allowed to avail himself of all privilege leave due to him immediately prior to retirement, and be permitted to retire from the service at the end of his leave, without having to return to duty as he is now obliged to do. This concession has already been made where privilege leave is combined with other leave, and its extension to privilege leave alone, besides removing a legitimate grievance among officers of the Department, would lead to much less administrative inconvenience than is now the case.

Study leave.—Modern Civil Engineering is a highly specialized profession and progress in the methods of construction is very rapid. In view of the vast undertakings of the Government of India in the Public Works and Railway Departments, it is essential, for efficiency and economy, that the Engineering Staffs of these Departments should keep themselves abreast of modern engineering practice. Engineers can only accomplish this by visiting and studying works of special interest in progress in different parts of the world. That the importance of this is recognized by other nationalities is instanced by the number of Engineers who are commissioned by their respective Governments or private employers, to visit works in India, in order to study Indian methods. The majority of Civil Engineers serving in these

* Government of India's letter P. W. D., No. 1399-1408-E. dated July 23rd, 1913—not reprinted.

Departments who wish to visit works in the British Isles and other countries, have to do so as private individuals, and entirely at their own expense unless they are placed on deputation, or are specially permitted to visit certain works while on leave, permission in this case usually being given only when Government require special information regarding a particular aspect of a project. In the latter case certain travelling and other expenses are allowed, but the time spent in the visits counts against the officer's period of leave. It is recommended that officers of the Public Works Department should be encouraged to visit works outside India, and that they should be provided with every facility for doing so. It is urged that either new rules should be introduced to admit of these facilities being granted, or that there should be a much more liberal interpretation of the existing rules regarding the placing of an officer on deputation.

The following instance of study leave obtaining in another professional service is cited. In the Indian Medical Service study leave is granted in England up to one year out of total service in addition to furlough, for the purpose of allowing an officer to study any particular aspect of his profession which he may desire. During this period he receives furlough pay and lodging allowance amounting to four to eight shillings per day.

72,588. **(VI.) Conditions of pensions.**—*Retiring pension.*—The greatest grievance of Civil Engineer Officers of the Public Works Department and one which is most sorely felt is the totally inadequate retiring pension to which they become entitled under the existing rules. Many efforts have been made, spread over a period of forty years or more, to obtain amelioration in this respect. Both the Government of India and different Secretaries of State have long recognized that all was not well, and new rules and conditions have been introduced to improve matters, but the net result has been that the present pensions are actually less than they were 40 years ago, when the qualifications demanded from men joining the service were not as high as they are now and when the cost of living was considerably less. Numerous memorials on this subject have been submitted to the Government of India and H.M. Secretary of State during the last six years by officers of these Departments. The first memorials were submitted in 1907, but the petitioners were favoured with no reply up to August, 1912, when they were informed by the Government of India in their letter No. 942-E., dated 30th August, 1912, that no decision could be arrived at pending the receipt of the report of the Royal Commission on the Public Services in India. It is to the Royal Commission therefore that the Civil Engineer Officers now look for redress of this long standing grievance, and it is strongly and respectfully urged that the scale of pensions prayed for in the memorials of 1912–13, Annexures II and III, is the least which can in equity be recommended.

Further, that as this grievance was brought prominently to the notice of the Government of India, in the memorials of 1907-08 to which they vouchsafed no reply, and as in the meantime a number of officers affected have been placed on the retired list, and many more will probably be called upon to retire before a decision is arrived at, any improvements made in the scale of pensions should have retrospective effect, at least from the year 1908.

Scale of invalid pensions.—Prior to 1884, invalid pensions granted to Civil Engineer Officers of the Public Works Department on the Imperial list were governed by Article 474 of the Civil Service Regulations; this article also governed the pensions of all officers belonging to the Uncovenanted Services, as then termed. In Lord Kimberley's Despatch of 1883 a new scale was introduced for Imperial Engineers and Telegraph Officers, with a view to ameliorating their conditions of service; this scale is covered by Article 641 of the Civil Service Regulations. Under this Article the scale has been increased from ten-sixtieths of average salary for ten years' completed service, eleven-sixtieths for eleven years, and so on to twenty-sixtieths for ten years, twenty-one-sixtieths for eleven years and so on, but at the same time the *maxima limits* have been reduced from those allowed by Article 474. How this rule, brought in with the object of improving conditions in certain Services, adversely affects officers at the present time, and how much better off an invalided engineer would have been under Civil Service Regulations, Article 474, is clearly shown from a comparison of the columns in the table below:—

Years of completed service.	Civil Service Regulations, Article 641.		Civil Service Regulations. Article 474.		
	Amount calculated on a percentage basis.	Fixed maximum.	Amount calculated on a percentage basis.		Fixed maximum.
1	2	3	4	5	6	7
		Rs.	Rs.		Rs.	Rs.
10 ...	20/60	2,813	1,000	10/60	1,406	2,000
11 ...	21/60	3,150	1,400	11/60	1,650	2,200
12 ...	22/60	3,520	1,800	12/60	1,920	2,400
13 ...	23/60	3,910	2,200	13/60	2,210	2,600
14 ...	24/60	4,320	2,600	14/60	2,520	2,800
15 ...	25/60	4,750	3,000	15/60	2,850	3,000
16 ...	26/60	5,200	3,000	16/60	3,200	3,200
17 ...	27/60	5,670	3,000	17/70	3,570	3,400
18 ...	28/60	6,160	3,000	18/60	3,960	3,600
19 ...	29/60	6,670	3,000	19/60	4,370	3,800
20 ...	30/60	7,200	4,000	20/60	4,800	4,000

It is a decided anomaly that officers of other services coming under Civil Service Regulations, Article 474, and drawing the same pay as an Engineer, should, if invalided, be entitled to a higher pension after 10, 11, 12, 13, 16, 17, 18 and 19 years' completed service, and to a less pension after 14 or 15 years' service.

It is urged, therefore, that to remove the anomalies pointed out, and to make Article 641 of real benefit to Civil Engineer Officers now serving in the Department, that the maxima limits should be at least the same as those fixed according to Article 474.

Family Pension Fund.—Unlike the Indian Civil Service and the Military Services in India there is no official Family Pension Fund for the Public Works Department. The emoluments of officers in this Department are not sufficient to admit of their making adequate provision for their families should they die in harness. The knowledge that they are unable to make such provision is a constant source of anxiety to many officers who are entirely dependent on their salary, and whose duties constantly take them into situations which are prejudicial to health. They have also the additional anxiety of knowing that their pensions are purely personal and cease with their death. There is a strong desire therefore, that means may be found whereby an officer may be aided in making suitable provision against the event of his death for the member of his family dependent upon him. Pension has been officially defined as deferred remuneration, which means that a certain portion of the salary which would have been paid to an officer, had there been no pension attached to his

appointment, is kept back to provide for a pension on retirement. This view is corroborated by the fact that when an officer is transferred on Foreign Service he is made to contribute towards the cost of his pension at the rate of one-sixth of the pay he would have received had he remained in the service of the Government of India. It may be presumed, therefore, that an officer only receives six-sevenths of the pay he would have received had there been no pension to provide for, and that one-seventh is kept back by Government as the officer's contribution towards his pension fund. If the officer had the option of investing the amount assumed to be retained by Government to provide for an annuity with a private Insurance Company, he could probably so arrange the terms, that a portion of his annuity would be assured to his widow or other member of his family dependent upon him, should his death take place within a certain number of years from the date his annuity fell due, with the additional security that his family would be covered against the risk of his death, should it take place during the time he was subscribing to his annuity, in the guarantee of a considerable sum of money. Could some such scheme be worked out by Government on an actuarial basis a large number of officers, not only in the Public Works Department but in other services similarly unprotected, would be glad to avail themselves of it and to subscribe towards the extra cost.

One set of leave and pension rules for all Imperial Engineers.—There is a strong wish among Imperial Engineers, that there should be one set of leave and pension rules for all Civil Engineer officers on the Imperial List, irrespective of the source from which they were recruited. Such differentiations as still exist should, it is urged, be abolished.

72,589. **(VII.) Such limitations as may exist in the employment of non-Europeans and the working of the existing system of division of services into Imperial and Provincial.**—*Appointment of non-Europeans to the Imperial Service.*—As regards employment of Indians in the Imperial branch of the Public Works Department, it is considered that the European element must, for a good many years to come, largely preponderate to admit of the present standard of efficiency being maintained. The number of appointments to the Imperial Service which may at the present time be reserved for Indians is ten per cent., and this rule should not, it is considered, be exceeded at present. The proportion of Natives of India to Europeans and Anglo-Indians combined at present on the active list of Imperial Engineers of this Presidency is 18½ per cent.

Of the 10 administrative posts in the Department three or 33⅓ per cent. are at present held (permanently or temporarily) by Indians.

Appointment of Natives or Anglo-Indians to the Imperial Service.—It is considered that no Native or Anglo-Indian should be appointed to the Imperial Service unless he has studied for at least three years in the British Isles and obtained a degree from one of the recognised British Universities.

Divisions into Imperial and Provincial Services.—It is considered that the present system of having two branches of the service, *viz.*, the Imperial and Provincial, should be adhered to for it is recognised that the value of a sojourn and training in the British Isles renders an Engineer's work more efficient than if he only obtains his education in India.

Recruitment for the Provincial Service.—It is also considered that the existing system of recruitment for the Provincial Service is satisfactory and that with the gradual improvements that are bound to take place in the Indian Engineering Colleges the general standard of efficiency of Provincial Engineers will be raised.

Differentiation in pay between the Imperial and Provincial Services.—It is considered that the market value of an Indian educated Engineer is considerably less than that of an Engineer with British qualifications. The Indian Engineer serves in the land of his birth and consequently is able to live in the accustomed style of his surroundings. That this is not possible for the European educated Engineer in India is obvious. Very few Indian Engineers would think of taking up an appointment in a foreign country without demanding a greatly increased salary. For this reason and for the reason that an Engineering education in India is cheaper than that in England, it is considered that there should be a marked differentiation in the rates of pay between the Imperial and Provincial Services.

72,590. **(VIII.) Relations of the service with the Indian Civil Service and other services.**—It is considered that the relationship as existing between the Public Works and other Services in India is, on the whole, satisfactory and should remain unaltered.

72,591. **(IX.) Any other points within the terms of reference to the Royal Commission not covered by the preceding heads.**—*Inadequacy of present travelling allowance.*—It is desired to bring to the notice of the Commission the inadequacy of the existing Travelling Allowance Rules in general, and in the case of transfers in particular.

It is urged that the existing rule which fixes the 5 mile radial limit within which, if an officer travels he cannot get the daily allowance, should be altered so as to read:—"Daily allowance cannot be claimed unless an officer travels at least 10 miles, out and back, from his head-quarters."

Travelling allowance on transfer.—It is realized that the inadequacy of the allowance under existing rules to an officer on transfer is common to other Departments and while admitting that transfers in the interests of the Public Service must inevitably involve some expense to the officers transferred and the practical impossibility of framing any rules suitable to all cases that will obviate it, it is very strongly urged that attention be paid to the very great hardships, especially in the case of long transfers, to which an officer is put owing to the inadequacy of the allowance permissible under existing rules.

It is believed that the question of revision of the existing rules to obviate distinct pecuniary (in many cases almost crushing) loss to an officer on transfer was under the consideration of the Government of India some 6 or 7 years ago and it is requested that the question be again considered with a view to the rules, which contain several anomalies, being made more liberal.

This question has, for many years, caused great heart-burnings and is one the remedy for which has received a great deal of careful attention by members of the Service and it is considered that if the following allowances be fixed a cause for considerable complaint will be removed:—

Maximum allowances on transfer.

(*a*) The allowance of double first class fare by railway as at present.

(*b*) The following for transport of kit:—

For Chief and Superintending Engineers:—
Three railway waggons or their equivalent by steamer, 2 horses, 1 motor car and 1 cycle.

For Executive Engineers:—
Two railway waggons or their equivalent by sea, 2 horses, 1 motor car and 1 cycle.

Assistant Engineers:—
One railway waggon or its equivalent by sea, 1 horse, 1 motor car, or motor cycle, and 1 cycle.

It is also urged that the above allowances (as regards kit) be made applicable to an officer who on return from long leave is transferred to another station. In this case the kit allowance would be from the station at which the officer last served prior to going on leave to the station to which he is posted on return from leave, and the usual rail allowance from port of debarkation (within his Province) to his new head-quarters.

Presidency house rent and extra emoluments.—It is felt that there should be some special pecuniary consideration shown to officers posted to the Presidency towns. At present an Engineer officer of this Presidency if posted to Bombay receives no extra pay. He is given a special Presidency house rent allowance if he is a married man, but *nothing* if he is a batchelor.

In the case of a married man, the special allowance for house rent is Rs. 125 a month on the average, but this is subject to the extraordinary condition that his *wife or family must be actually residing with him:* that is to say that supposing a man has children at school in England and his wife goes Home for three months to see them or goes away for the sake of her health, then he does not get this house rent allowance and, from this it is natural to deduce that he is

expected to break up his arrangements, leave his bungalow or flat, and live in a hotel or club, only to again incur the expense of getting a new house and furnishing it at great expense.

It will be realized that it means that, in a city like Bombay, where suitable accommodation for a married man at any but exorbitant rentals, is difficult to get, the unfortunate officer has most probably to pay a heavy rent for his flat during the absence of his wife and yet get no allowance.

This is, it is considered, a most unfair anomaly and it is strongly urged that the Presidency house rent allowance should be extended to all officers whether married or not.

Apart from this grievance the question of extra emoluments to the pay of an officer posted to a Presidency town requires consideration.

In this department officers are not highly paid and, when posted to Presidency towns, they, unless they have a private income, must run into debt if they are to live up to their official position. The ordinary every-day expenses in a Presidency town (Bombay for example) are very great and as junior Executive Engineers are often posted to Presidency towns it will be readily understood that the Rs. 800 salary is almost entirely swallowed up by the bare necessities of life.

To remedy this source of complaint it is suggested that a special allowance of from 25 per cent. to 50 per cent. of the ordinary salary, in addition to that salary, be allowed to all officers appointed to posts in Presidency towns, the lower the pay the higher the percentage increased.

General Provident Fund.—Under the rules of this Fund interest on the account of a deceased depositor ceases from the date of tender of payment to the person legally entitled to receive the balance at credit of the account. It frequently happens that from inexperience in matters of the kind, and other causes, it is not possible to draw the amount immediately on tender of payment being made. It is therefore suggested that it should be permissible for the balance at credit of an account to remain for a reasonable period after tender of payment has been made and to continue to draw interest during that period.

Inadequate recognition of the Engineering Departments in the Honours Lists.—There has been for a very long time a growing dissatisfaction among Engineers in India with the Honours distribution, which has resulted in what is felt to be an implied public slur on the profession.

It is felt that the power to confer Honours on the Public Services was entrusted to the General Administration as a means of giving public recognition to individual merit impartially to all public servants deserving such recognition, and that given impartial exercise of this power, the Honours Lists would be, to some extent, an index of appreciation by the Administration of services rendered by any given branch of the service. Judged by this standard, a study of the Honours List indicates a marked lack of appreciation of services rendered by the Engineers of the Public Works and Railway Departments which is felt to be unjust. There is, so far as is known, no other country in the world, where a similar system of Public Service Honours obtains, in which the Engineering profession is held in such light esteem, as is evidenced in the Honours List in India, while, certainly in some of its aspects, the work of the Department in India stands out prominently as of a high order of merit, as has frequently been proved by the deputation of Indian Engineers to other countries as experts in their particular profession.

Although it is not definitely known to the officers of this Department what system is followed in framing the Honours Lists, it is generally believed that the results, which are the subject of dissatisfaction, are due to the fact that the recommendations are almost exclusively in the hands of the Civil Service, and that this has led to a gradually increasing tendency to restrict Honours unduly to that branch of the Service.

It is believed that if the matter is considered worthy of notice by the Commission, an expression of opinion by them would carry much weight and lead to rectification of what is a very substantial grievance. The figures given below speak for themselves.

Statement comparing Honours granted in the Indian Civil Service and those granted in Public Works Department to each Province. Abstracted from the Civil Lists, April 1913.

GOVERNMENT OF INDIA.

Public Works Department, Irrigation Branch. Letter No. 942-*E., dated Simla, the* 30*th August,* 1912. (*Vide* Appendix No. XIII.)

ANNEXURE No. V.

Short History of the Public Works Department Pension Rules. (*Vide* page 146,—evidence of Mr. W. S. Dorman.)

Mr. C. S. C. HARRISON called and examined.

72,592. (*Chairman.*) The witness was an Executive Engineer in the Public Works Department of Bombay and represented the Imperial officers. He had completed eleven and a half years' service.

72,593. The present system of recruitment to the Provincial service was satisfactory, and with gradual improvements in the engineering colleges in India the general standard of efficiency of the service would be raised, and if the standard was raised the proportion of recruitment in India could also be raised provided a sufficient number of Europeans were recruited to maintain British characteristics.

72,594. With regard to the rule for the recruitment of Indians in England, he considered that there should be no increase on the present ten per cent. The majority of the officers believed that nobody should be selected in England who had not had three years at a British Engineering College and taken a degree, but personally he did not hold that view. His own view was that six or seven years at least should be spent in England, so that a man might have had a public school education and the influence of English surroundings before his college course. A college course of three years was not sufficient to make an Indian very much better than a provincial engineer. The written statement expressed the opinion of all the eighty-one officers in the service except five and therefore might be taken to represent the opinion of close on eighty-five per cent. Three years in England would mean that no officer could enter the Imperial service who had been trained in an Indian college, and that was so at the time he was at Cooper's Hill, where there were two Indian students who had passed in India and then gone to England for another three years' course.

72,595. The present system of division into Imperial and Provincial branches should be adhered to because a training in a British college was extremely important. It was true that in the past the Indian colleges had turned out as capable officers as were now to be found in the service, but the conditions of service had changed tremendously and the work now demanded a great deal more of a man than it did in years gone by. The press of work was much greater. Officers had more responsibility now, especially in the administrative grades, than in the days when Rurki men were successful engineers. He did not think the improvement in the Indian colleges had kept pace with the added responsibilities of the officers. The difference might be observed by referring to the administrative reports of thirty or forty years ago.

72,596. It should be a condition of appointment to the Imperial branch that recruits should have had at least one year's practical experience on engineering works in the British Isles. Practically every Junior officer now in the service had had a year's training on some works in England. The consensus of opinion was that if it was considered that an officer had not had sufficient practical experience in England with his one year's practical course he might be put on a practical course in India as well. It was essential that a man should have a year's practical training and it was a very important factor in obtaining men for the public service.

72,597. There were four Royal Engineer officers in the department. The junior officers had come in at the bottom of the list, so that of recent years the difficulty of a Royal Engineer being placed over Civil Engineers of the same standing had not arisen. The Royal Engineers had been recruited in the last few years. For the purposes of seniority Royal Engineers should always come in with the other officers.

72,598. The pay of Superintending Engineers was last raised in 1908. The present salary was from Rs. 1,500 to Rs. 2,000 and he suggested it should be raised to Rs. 1,750 to Rs. 2,500. Considering the responsibilities on a Superintending Engineer he was rather underpaid at present. The break at Rs. 800 should be abolished and officers who were qualified, whether they were holding an executive position or not, should advance to the maximum of the time-scale. The possibilities were greatly against his ever getting to the Rs. 1,250 rate without reaching a higher post.

72,599. Allowances were recommended for those who were out in country districts on account of the lonely life they had to lead, and for those in Presidency towns on account of the expense. A man in the most populous district would collapse under his financial burdens if he were not given an allowance, and therefore of the two the Presidency allowance was the most important. An addition of twenty-five to fifty per cent. on his salary would be a reasonable allowance. An allowance was now given to married officers as long as their wives were actually with them, but if the wife went away for three months the allowance was stopped. The allowance should be payable whether the wife was in the country or not, and it should also be extended to bachelors.

72,600. Further facilities should be given for study leave on the lines adopted in the Indian Medical Service.

72,601. With regard to a family pension fund, he had no specific proposals to put forward and considered that a scheme would have to be worked out on an actuarial basis. He thought officers would be quite prepared to have a family pension fund established without cost to the State if it was established on sound financial lines.

72,602. He emphasised the hardship caused by the present transfer allowance rules. The allowance to an Assistant Engineer on transfer was twenty maunds of luggage and double first class fare. Several general statements had been sent into him by officers and one or two detailed statements and he would put in three cases dealing with transfers between 1910-12.*

72,603. (*Mr. Abdur Rahim.*) Slightly more officers were employed on roads and buildings than on irrigation. In the construction of roads and buildings it was necessary to employ English trained men; he did not say Indians were not good enough, but for the general administration it was necessary to maintain a British element. For the work itself local men were quite good enough under British supervision. There was undoubtedly considerable engineering talent in India and the Indian element had largely increased in the service in the last twenty or thirty years, though in Bombay it happened to have gone down.

72,604. With regard to study leave a medical officer who took study leave was not bound to pass an examination but simply followed a definite course of study.

72,605. (*Mr. Madge.*) He did not consider that the suggestion that no one should be appointed to the Imperial service unless he had studied for three years in Great Britain would operate as a serious bar to the recruitment of engineering talent in India. If an

* *Vide* Appendix XV.

Indian had exceptional talent he could rise to administrative rank, and when he got to a high appointment there was little difference between his pay and the pay of the Imperial Engineers. In fact in the administrative grades he would not mind an officer being taken into the Imperial service and therefore he would qualify the remarks in the written statement to the extent of saying that when a Provincial officer reached an administrative post he should be taken into the Imperial service.

72,606. The allowance he claimed for men in isolated places was intended to cover the considerable expense an officer incurred in sending his family to a station which might be many miles away. It cost him a good deal to enjoy the amenities of civilised life. If an officer was in a station where he could meet friends it would be another matter.

72,607. (*Mr. Fisher.*) There were very few posts in the service where a training in mechanical engineering was of much use. His general view was that it was desirable to send an Indian to England not so much in order that he might obtain a superior technical training as in order that his views might get broadened. From the point of view of technical engineering facilities the Indian colleges were very good, though they were not quite so good as an English colleges. He would not send a man to England solely for mechanical engineering.

72,608. (*Mr. Sly.*) The present rule with regard to Royal Engineers was that they entered the department with seniority dating two and a half years after their first commission, and the intention of the rule was to put the Royal Engineer on an equal footing with a Civil Engineer of the same age; but he objected to the Royal Engineer being brought in anywhere except at the bottom of the list. It was one of the conditions of the service that a certain number of Royal Engineers should be employed, but the rule did not mean that they should be put in above men already in the department. The officers desired a guarantee that Royal Engineers should be brought in young.

72,609. His temporary colleagues (*i.e.*, temporary engineers) asked for a provident fund on the lines of the fund for temporary employees on the State railways, to which he believed Government contributed cent. per cent. If an officer was dismissed for any glaring fault Government could withhold its contribution, but if he was discharged in the natural course of events he received the whole of the money to his credit in the fund

72,610. He would only give the Bombay officers one allowance if they were given houses at the ordinary rental of 10 per cent. of their pay. There was considerable difficulty in inducing men to take appointments in Bombay; the only attraction seemed to be Secretariat experience, but that was not sufficient to make service in Bombay popular.

72,611. It was a fact that transfer allowances were not given when the transfer was made to Bombay. The twenty maunds allowed to an Assistant Engineer was supposed to be camp equipment and Government considered that there was no necessity for camp equipment if a man was in Bombay.

72,612. (*Mr. Chaubal.*) He believed there had been some deterioration in the candidates appearing before the selection committee in London, and he was of opinion that if the selection committee was reconstituted as suggested in the written statement the material obtained for the service would be considerably improved. He objected to a competitive examination because it would bring men into the service simply on the throw of one die, but he had no instance to show that where a system of competition amongst qualified candidates had been tried it had failed.

72,613. He did not think recruits realised the conditions of the service until they came into it and therefore there was still many applications on the part of qualified men. By raising the salaries, better material would be obtained and the service would be much more contented. The same proposition might be applied to the Provincial service, as the more the prospects were improved and the salaries raised the better and more contented the service would be. He would not say that because men were coming into the Provincial service on the present salaries no increase in the present salaries should be considered.

72,614. (*Lord Ronaldshay.*) A good engineer in England was more or less certain of employment and a really first-class man would probably not take the trouble of going up for the service if he had to go through a competitive examination, unless he was specially keen to come out to India. A competitive examination might deter a great many good men from coming forward.

72,615. (*Mr. Kent.*) In connection with the various provident funds of municipalities and public bodies there was generally a condition that in the event of an officer's service being dispensed with before ten years he would not draw the contribution of the municipality or public body, and that appeared to be a fair condition to attach to a provident fund. If it was an ordinary case of reduction of establishment the contribution should be given to him. He thought a contribution by the State to a provident fund would work well, and probably the wishes of the department would be met by a combination of the pension system and a pension fund for widows and orphans on the lines prescribed for military services.

72,616. Daily allowance could not be claimed unless an officer travelled at least ten miles out and home from headquarters. If an officer did not go beyond a five mile limit he might travel thirty miles but would still get no daily allowance.

72,617. In the old days the Presidency allowance was fixed at Rs. 100 a month and house rent at Rs. 45 a month in the case of all officers, whether single or married, and officers were now worse off than they were under the old rules. There was no reason why a batchelor should be debarred from the allowance.

72,618. In some cases it was desirable that the State should employ experts and he would not bar a man from entering the service because he happened to specialise in one branch of engineering. A man might be required, for instance, who had a good knowledge of reinforced concrete construction, which was a very special thing.

72,619. Ninety-nine per cent. of the officers were of opinion that there should be no extensions beyond fifty-five years of age unless the officer retained was taken right outside the cadre.

72,620. (*Mr. Advani.*) It was only recently that Indians had risen to higher appointments. In administrative appointments they might get along in a sort of mediocre way, but they would not be as efficient as the men who came out from England. There was a great deal of selection for promotion but seniority counted very much. As a rule the best men were selected over the heads of others for administrative appointments, but not quite to the extent that they should be.

72,621. Officers should be encouraged in every way to go to England for part of their furlough, even subordinates; but the three years' training in England should be taken quite young when a man was more impressionable and open to British influences.

72,622. He would be against promoting into the Imperial service even a man of marked ability, because he would not have had an education in England; but he would be prepared to consider the question of providing an opening for Indians of marked ability.

72,623. In the interests of the State the Provincial service officers should be paid according to their market value, which should be fixed by the quality of the men who could be obtained on the terms offered. The probabilities were that up to a certain limit better men would be obtained by the grant of higher pay. At present there was discontent in the Provincial service and that might well affect their efficiency. The present state of pay for Executive Engineers in the Provincial service was low.

72,624. He would not tie a man down to one year's training with any one particular firm, but he would give him three or four months with different firms, and he thought it would be quite possible to make arrangements accordingly.

(The witness withdrew.)

At the India Office, London, Monday, 4th May, 1914.

PRESENT:

THE RIGHT HON. THE LORD ISLINGTON, G.C.M.G., D.S.O. (*Chairman*).

THE EARL OF RONALDSHAY, M.P.
SIR MURRAY HAMMICK, K.C.S.I., C.I.E.
SIR THEODORE MORISON, K.C.I.E.
SIR VALENTINE CHIROL.

ABDUR RAHIM, ESQ.
FRANK GEORGE SLY, ESQ., C.S.I.
JAMES RAMSAY MACDONALD, ESQ., M.P.
M. S. D. BUTLER, ESQ., C.V.O., C.I.E. } (*Joint Secretaries*).
R. R. SCOTT, ESQ.

HERMANN A. HAINES, ESQ., Secretary, Public Works Department, India Office.

Written Statements relating to the Public Works and Railway Departments.

I. Extracts from a Memorandum on appointments made by the Secretary of State for India in Council.

72,625. *Indian Public Works Department and Indian State Railways. (Engineering Branch).*—The present system of recruitment was adopted in 1905 after the closing of the Royal Indian Engineering College, Coopers Hill. The appointments are widely advertised in the Press, and the selection of candidates is made by a Committee of three persons appointed for the purpose each year by the Secretary of State. This Committee has on each occasion consisted of (1) the Member of the Council of India who is Chairman of the Public Works Committee; (2) Colonel Sir John Ottley, K.C.I.E., formerly President of the Royal Indian Engineering College, Coopers Hill; and (3) one member nominated by the Council of the Institution of Civil Engineers. In 1910, 1911, 1912 and 1913, the Committee consisted of (1) Sir Hugh Barnes, K.C.S.I., K.C.V.O.; (2) Colonel Sir John Ottley, K.C.I.E., R.E.; and (3) Sir Alexander Binnie, Kt.

Indian State Railways (Assistant Traffic Superintendents). — For these appointments recruitment is made three-fifths in England and two-fifths in India. The recruitment in England is not undertaken at fixed periods, but on a specific demand from India for a stated number of men. When such a demand is received a Selection Committee (consisting generally of the Member of the Council of India who is Chairman of the Public Works Committee, the Government Director of Indian Railway Companies, and the Secretary of the Public Works Department, India Office) is appointed by the Secretary of State. The Selection Committee consider any applications which may have been made since the last recruitment, and are awaiting the occurrence of further vacancies, and further invite by special letter (*a*) the principal railway companies in the United Kingdom to make known the appointment to any suitable candidate with sufficient railway experience, and (*b*) the Appointments Committees of Oxford and Cambridge and any other University that may apply to be furnished with such notices to suggest suitable University candidates. When all the applications have been received every candidate who is qualified under the regulations and is not *primâ facie* quite unsuitable is invited to an interview with the Committee, who then make their selections. There is no rule as regards the relative proportions of men with railway experience and University men appointed, but the Committee are guided, in the absence of an expressed wish on the part of the Government of India, by the relative suitability of the candidates who present themselves.

(2) Recent Selection Committees have been constituted as follows:—

Sir H. S. Barnes, K.C.S.I., K.C.V.O., Chairman of the Public Works Committee of the Council of India. A Brereton, Esq., C.S.I., Government Director of Indian Railway Companies. H. A. Haines, Esq., Secretary, Public Works Department, India Office.	August 1911 August 1912. January 1913
Sir James Thomson, K.C.S.I., Acting Chairman of Public Works Committee. A. Brereton, Esq., C.S.I. H. A. Haines, Esq.	August 1913.

(3) *Miscellaneous Public Works Appointments.* —The India Office is occasionally called upon to engage other persons for special appointments in Indian Service. These appointments are not made on the advice of a formally constituted Selection Committee. They are comparatively few, the rate of recruitment is low and irregular, and candidates with specialised or technical training are required. Thus within the last five years Consulting Architects have been engaged for the Governments of Bombay, Bengal, Eastern Bengal and Assam, Burma, and the United Provinces. It has been the practice to request the President of the Royal Institute of British Architects to nominate suitable candidates for these appointments. Assistant architects have also been engaged for several of the Local Governments in India, the selection of candidates being, at the request of the India Office, made by the President of the Architectural Association. There are also from time to time requests from India for the engagement of electrical engineers or other engineers with special qualifications. The method of filling such appointments depends on the circumstances of each case and a suggestion as to the method of recruitment not infrequently accompanies the demand. Public advertisement is made when necessary.

(4) Applications for special appointments of this kind are recorded in the Public Works Department of the India Office, and on occurrence of a vacancy for which the applicant is *primâ facie* suitable, care is taken to see that his application is considered along with those of other candidates. Appointments such as electrical inspectors, experts for supervising water-borings, plumbers, mechanics, foremen, electricians are occasionally made. The expert advisers consulted in such cases vary according to the nature of the appointments.

Public Works Department.—II. Supplementary Note by Mr. Haines.

72,626. A memorandum prepared in this Office regarding recruitment for the Public Services in India through the channel of the Public Works Department, India Office, has already been laid before the Royal Commission. I now submit a Supplementary Note with annexures.

(2) The first annexure is a Statement showing the number of appointments made through the Public Works Department of this Office to the superior establishments of the services of the Government of India since 1st January 1911, and the manner in which the selections were made.

(3) In regard to the appointment of Assistant Engineers, the following further observations may be made. The question of the qualifying degrees of candidates has been the subject of prolonged consideration. I attach (Annexure II.) a copy of Appendix I. of the Regulations in the revised form in which it has been approved by the Secretary of State in Council for appointments to be made in 1915.

(4) In paragraph 5 of the Regulations* for appointments of Assistant Engineers, it is laid down that not less than 10 per cent. of the appointments

* *See* Memo above.

will be reserved for Indians. This rule had its origin in the time of Coopers Hill College. The College at that time admitted students to the number of about 50 a year; and about 12 engineering appointments were offered each year to the most successful students at the end of their course. The College was open to Indians as well as Europeans. The following rule was inserted in the College Prospectus for 1901:—

"Natives of India who are British subjects have the exclusive right to enter the Public Works and Telegraph Departments through the Indian Engineering Colleges. They cannot claim, therefore, the right of admission to the Royal Indian Engineering College, which is maintained for the training of Europeans, with a view to compete for the appointments given to its students.

"Nevertheless, when there is spare accommodation, the President has discretionary power to admit natives of India who are British subjects, and two appointments in those services, but not more than two in the aggregate in each year, may be awarded to such students."

(5) When the College was closed in 1906, the provision for the appointment of Indians to the Imperial Service of the Public Works Department was continued, and a rule was inserted in the Regulations to the effect that the total number of natives of India appointed in any year under these Regulations "shall not exceed 10 per cent. of the total number of Assistant Engineers thus recruited." This was changed in 1909, and the rule altered to provide that "Natives of India shall be selected to the extent of 10 per cent. of the total number of Assistant Engineers thus recruited, if duly qualified."

This rule is still in force.

(6) It may be added that the Reports of the Selection Committee show a continuous improvement in the standard of Indian candidates since the present system of selection came into force.

(7) With regard to the appointments of Architects and to most of the other Miscellaneous appointments shown in Annexure I., it may be stated that the appointments are made in the first instance on short agreements for five or three years, but at the end of the first term, the services of the officers are generally retained on fresh conditions involving a higher salary. These fresh conditions are recommended by the Government of India and approved, with or without modifications, by the Secretary of State. There are no regulations on the subject.

ANNEXURE I.

Public Works Department.

Appointments made to the Superior Establishments of the Services of the Government of India since 1st January 1911.

Appointments.	Year.	Number of Appointments made.	Salaries of Appointments.	By whom Candidates were selected.
(i) *Assistant Engineers* (Imperial Service) in the Public Works and State Railway Departments.	1911	23*	Commencing at Rs. 380 a month.	Selection Committee appointed by the Secretary of State, consisting of Sir Hugh Barnes (Chairman of the Public Works Committee of the Council of India), Colonel Sir John Ottley (late President of Coopers Hill College), and Sir Alexander Binnie (representing the Institution of Civil Engineers).
	1912	20	Do.	
	1913	33	Do.	
(ii) *Temporary Engineer* for deep borings for artesian wells, Bombay.	1913	1	Rs. 700–800 a month.	Ingersoll Rand Company.
(iii) *Assistant Electrical Engineer* for Oudh and Rohilkund Railway.	1914	1	—	Selected by Consulting Engineer, but appointment actually made in India, the candidate having in the meantime proceeded to India on his own account.
(iv) *Assistant Signal Engineer* for Indian State Railways.	1912	1	Rs. 350–25–400 a month.	Consulting Engineer to the Secretary of State for India.
(v) *Workshop Accountant* for Indian State Railways.	1913	1	Rs. 600–50–900 a month.	Mr. W. F. O'Donoghue, late Accountant-General and Secretary to the Government of India in the Public Works Department.
(vi) *Assistant Traffic Superintendents*, Indian State Railways.	1911	5	Commencing at Rs. 350 or Rs. 400 a month.	Selection Committee appointed by the Secretary of State, consisting of the Chairman of the Public Works Committee of the Council of India, the Government Director of Indian Railway Companies, and the Secretary in the Public Works Department of the India Office.
	1912	3	Do.	
	1913	8	Do.	
	1914	1	Do.	
(vii) *Assistant Locomotive and Carriage and Wagon Superintendent*, Indian State Railways.	1911	6	Commencing at Rs. 300, 350, or 400 a month.	Consulting Engineer to the Secretary of State for India.
	1912	4	Do.	
	1913	7	Do.	
	1914	4	Do.	
(viii) *Assistant Coal Superintendents*, Indian State Railways.	1913	2	Rs. 450–50–600 a month.	Director-General of Stores in consultation with Consulting Engineer.
	1914	1	Do.	H.M.'s Chief Inspector of Mines, Home Office.
(ix) *Assistant Laboratory Officer*, Indian State Railways.	1913	1	Do.	Director-General of Stores in consultation with Consulting Engineer, and the Director of the National Physical Laboratory.
(x) *Assistant Chemist*, Indian State Railways.	1913	1	Do.	Do. do.

* Made by the Judicial and Public Department.

Appointments.	Year.	Number of Appointments made.	Salaries of Appointments.	By whom Candidates were selected.
(xi) *Electrical Inspectors* for Local Governments in India.	1913	1 (Madras).	Rs. 600 a month.	Director-in-Chief, Indo-European Telegraph Department.
		1 (United Provinces).	Rs. 700 a month.	Director-General of Stores in consultation with Mr. Goument, late Chief Engineer and Secretary to the Government of the United Provinces in the Public Works Department.
(xii) *Architects* :—				
(*a*) Consulting Architects	1911	1 (Burma).	Rs. 800–50–1,000 a month.	President, Royal Institute of British Architects.
	1912	1 (United Provinces).	Do.	Do. do.
	1913	1 (Punjab).	Do.	Do. do.
(*b*) Assistant to Consulting Architect.	1913	1 (India).	Rs. 600–40–800 a month.	Do. do.
(*c*) Assistant Architects.	1912	4	Rs. 340–40–500 a month.	President of the Architectural Association.
	1913	2	Do.	Do. do.
	1914	2	Rs. 540–40–660 a month.	(1) President of the Royal Institute of British Architects, and (1) President of the Architectural Association.
(*d*) Architectural Draughtsman.	1913	1	Rs. 500–50–600 a month.	Mr. E. L. Lutyens, Architect for New Delhi.

ANNEXURE II.

DRAFT OF APPENDIX I. FOR PUBLIC WORKS DEPARTMENT REGULATIONS, 1915.

LISTS OF DEGREES REFERRED TO IN PARAGRAPH 6.

The degrees shown in Lists A and B are accepted without reservation in the case of candidates who matriculated on or before 30th June 1914. The special condition applicable to candidates who matriculated on or after 1st July 1914 are stated in the Notes appended to the two lists.

Candidates who reply on a degree in "Mechanical" or "Electrical" Engineering or in "Naval Architecture" should have had at least one year's practical experience in Civil Engineering.

List A.

Oxford.—B.A. (with Honours in the Engineering Science Final Honours School).
Cambridge.—B.A. (with Honours in Mechanical Science Tripos).
St. Andrews.—B.Sc. in Engineering.
Glasgow.—B.Sc. in Engineering.
Edinburgh.—B.Sc. in Engineering.
Dublin.—B.A.I. with Honours in Engineering.
London.—B.Sc. with Honours in "Civil and Mechanical" or "Electrical" Engineering.
Victoria University (Manchester).—B.Sc. with Honours in Engineering.
Birmingham.—B.Sc., with Honours in "Civil," "Mechanical," or "Electrical" Engineering.
Liverpool.—B.Eng., with Honours in "Civil," "Mechanical," or "Electrical" Engineering, or Naval Architecture.
Leeds.—B.Sc., with Honours in "Civil," "Mechanical," or "Electrical" Engineering.
Sheffield.—B.Eng., with Honours in "Civil," "Mechanical," or "Electrical" Engineering.

Note to List A.—In the case of candidates who matriculate after 30th June 1914 the above degrees will be accepted only if taken after three years' study in the several Universities, but this condition will not apply to Indians who, having taken an Indian degree which exempts them from part of the University course, shall have taken one of the above degrees in less than three years in accordance with the regulations of the University concerned.

List B.

Dublin.—B.A.I.
Durham.—B.Sc. in "Civil," "Mechanical," or "Electrical" Engineering, or in Naval Architecture.
London.—B.Sc. (Engineering).
Victoria University (Manchester).—B.Sc. Tech. in "Mechanical" or "Electrical" Engineering (Honours Division in the Final Examination).
University of Wales.—B.Sc. (in "Civil," "Mechanical," or "Electrical" Engineering).
Birmingham.—B.Sc. (Engineering).
Liverpool.—B.Eng.
Leeds.—B.Sc. in "Civil" or "Mechanical" Engineering.
Sheffield.—B.Eng. (First Class in the Final Examination).
National University of Ireland.—B.E.
Bristol.—B.Sc. in "Civil" or "Mechanical" Engineering.

Note to List B.—In the case of candidates who matriculated after 30th June 1914 the degrees in List B will be accepted only if (1) the matriculation or other entrance examination accepted by the Institution of Civil Engineers to the Engineering course in the University has been passed, and (2) a regular course of study occupying not less than three academical years has been pursued in the University between the passing of such matriculation or other entrance examination and the passing of the final examination for the degree.

But Indians who have taken an Indian degree which exempts them from part of the University course will be regarded as having satisfied condition (1) and will be exempted from condition (2) if their degree has been obtained in less than three years in accordance with the Regulations of the University concerned.

ANNEXURE III.

Note by Sir A. M. Rendel, dated 22nd April 1914, on his Procedure in Getting and Choosing Candidates.

I should premise that I am not concerned with the appointments to the Civil Engineering section of the P.W.D. but, as Mr. Haines says, I am referred to when men are wanted for the locomotive, carriage and wagon, electric, and other mechanical departments of Government railway management; and I, or rather my firm, are applied to by our other Indian clients for all descriptions of railway appointments of the mechanical class, and some others as well.

Our mode of action in obtaining the men indented for is advertisement in the Press. A paper containing questions as to age, nationality, education (general and professional), practical experience, &c., is then sent to all of the applicants who seem to require consideration. These papers and a personal interview with those whose answers promise well, form the basis of the final selection. In no case is there any favouritism in any way, except so far as this, that, *cæteris paribus*, we incline, with the full assent of our clients, to a preference to the sons or near connections of men who have done good service to the Government of India.

The number and quality of the applicants varies greatly, depending a great deal on the activity of railway construction in the world of British enterprise; but I am safe in saying that the higher values attached of late years to the theoretical education noticeable in all occupations is having its full effect on the civil engineer, who is now frequently able to show a diploma or degree—often with honours—from some University or first-class teaching authority, and as a matter of fact we are now able to almost confine our recommendations to men who can produce one. It is not so marked in the other branches of my profession, but it is to a great extent compensated for by a longer and more searching practical training, and by the opportunities offered by the evening schools maintained by many of the great English railway companies, of which many young men fully avail themselves.

ANNEXURE IV.*

(*i*) *Return showing for the year 1911–13 the number of Indian applicants for appointment as Assistant Engineer, &c.*

—	1911.	1912.	1913.	Total.
Number of qualified candidates	10	13	16	—
Number of appointments made	3	3	4	10

(*ii*) *Provinces from which 10 Indians appointed as Assistant Engineers in 1911–12–13 came :—*

—	1911.	1912.	1913.	Total.
Punjab	1	2	4	7
Bombay	1	—	—	1
Burma	1	—	—	1
Hyderabad	—	1	—	1
	3	3	4	10

(*iii*) *Universities at which 10 Indian Assistant Engineers appointed in 1911–12–13 took their course :—*

—	1911.	1912.	1913.	Total.
London	1	1	3	5
Glasgow	—	1	1	2
Edinburgh	1	—	—	1
Manchester	—	1	—	1
No University	1	—	—	1
	3	3	4	10

* This Annexure was put in by Mr. Haines after his oral examination, *vide* paragraph 72,628.

ANNEXURE V.*

Statement showing (a) number of natives of India who have applied for appointment as Assistant Engineers in Indian service and (b) number of natives of India appointed in years 1905–1914

Year.	Number of Indian Applicants.	Number of Indians qualified for appointment.	No. of Indians selected.
1905	No record	No hard and fast line was drawn in these years between "qualified" and "unqualified" candidates.	—
1906	1		—
1907	—		—
1908	8		—
1909	13	7	3
1910	16	7	3
1911	20	10	3
1912	16	13	3
1913	22	16	4
1914	31	21	3

* This annexure was put in by Mr. Haines after his oral Examination, *vide* paragraph 72,628.

ANNEXURE VI.*

Statement showing amount of professional experience possessed at the time of their selection by Assistant Engineers appointed during the years 1905–1914.

Year.	No. of appointments made.	No professional experience.	One year's experience or less.	More than one year's experience.
1905	25†	2	11	12
1906	14†	1	7	6
1907	17	—	6	11
1908	39	—	14	25
1909	30	—	5	25
1910	25	1	7	17
1911	23	—	—	23
1912	20	1	8	11
1913	33	—	13	20
1914‡	30	—	18	12

* This annexure was put in by Mr. Haines after his oral Examination, *vide* paragraph 72,628.
† In addition to appointments made from the Royal Indian Engineering College, Coopers Hill.
‡ No appointments have yet been made in 1914. The figures refer to the candidates selected for appointment and may require revision.

Mr. H. A. Haines called and examined.

72,627. (*Chairman.*) The witness was Secretary of the Public Works Department of the India Office and a member of the Selection Committee for certain traffic appointments.

72,628. He put in a return† showing for the last three years the number of applicants for appointments who were non-Europeans, and he undertook to put in a further return showing the number of candidates selected for the Public Works Department and the Railway Department, and distinguishing those who had had no professional experience from those who had had a year's professional experience or more.†

72,629. (*Lord Ronaldshay.*) Under the present rule Indians had to be appointed to the extent of 10 per cent., but it was not meant definitely to limit them to that percentage, though, as a matter of fact, the 10 per cent. had not been exceeded. He was not able to say whether under the rule Indians had been appointed who would not have been appointed if the rule had not been in existence, but he knew, as a matter of fact, that three or four years ago it was felt that some Indian candidates, who were only just up to the standard of qualification, would not have stood a chance unless they had been appointed under the 10 per cent. rule.

† Vide annexures IV, V and VI to written statement.

72,630. (*Sir Theodore Morison.*) It was a fact that the first Selection Committee reported that they would not have selected those two or three Indian candidates but for the operation of the 10 per cent. rule, but he understood that Indians were now coming forward with better qualifications. The rules as to qualifications had been recently revised so as to conform with the rules observed by the Institution of Civil Engineers, but a special exception had been made so as to allow Indians possessing an Indian degree to come forward as candidates for the Public Works Department although their qualifications would not be up to the standard prescribed by the Institution of Civil Engineers.

72,631. (*Mr. Chaubal.*) The rule in force at Cooper's Hill stipulated that the 10 per cent. should not be exceeded, but the wording of the rule was afterwards altered. He understood that the interpretation of the wording of the regulation as it stood would not prevent the appointment of more than 10 per cent., although more than 10 per cent. had not been appointed in the past. It was, however, an accident that there was not an additional Indian appointed last time. The original wording was, "shall not exceed 10 per cent.," and that was altered to, "be selected to the extent of 10 per cent.," but it had not been understood in the India Office that only 10 per cent. could be selected.

72,632. (*Mr. Sly.*) The number of European candidates in 1911 was 89, and the number of Indian candidates fully qualified 10, so that there were only 99 fully qualified candidates in 1911 for the Indian Public Works and State Railway Department. The figures given in his written statement represented the total number of applicants and not those who were interviewed. All candidates who were fully qualified under the rules were interviewed.

72,633. Sir Alexander Binnie was at one time a member of the Selection Committee, nominated by the Institution of Civil Engineers, but for the present year the Institution had nominated Mr. Elliott Cooper.

72,634. The Selection Committee, appointed by the Secretary of State to advise him in connection with the appointment of Assistant Traffic Superintendents, included the Government Director of Indian Railway Companies, who had fairly recent experience of railway management in India.

72,635. (*Mr. Macdonald.*) Some of the appointments were made on the advice of one individual; for instance, the appointments of Assistant Coal Superintendents were made on the advice of His Majesty's Chief Inspector of Mines. The Chief Inspector recommended and the Secretary of State accepted his nomination. He did not think these appointments were advertised in the papers, but the Chief Inspector circularised the managers of a great number of coal mines. The first appointment, in 1913, of an Electrical Inspector was made on the sole advice of the Director-in-Chief of the Indo-European Telegraph Company, who was in touch to some extent with the Electrical Inspector in the Stores Department. He believed that post was advertised, and the same remark applied to a good many of the positions alluded to in his written statement. The posts of architects were not advertised as the principal architectural institutions, with which all architects were in touch, were approached on the occurrence of a vacancy. There was no rule that certain vacancies carrying a certain salary must be advertised, and he did not think a universal rule would be possible, as some of the appointments were very special; for instance, a person had to be obtained who was experienced in deep boring, and for that purpose the Ingersoll-Rand Company had to be approached, this being practically the only firm which could supply a man with the special training required. He did not think there would be any harm in having a rule by which appointments would all be advertised.

72,636. (*Mr. Abdur Rahim.*) With regard to the Indians who had got in under the 10 per cent. rule, but who otherwise would not have had a chance, he explained that the standard they had reached barely qualified them for appointment. It was quite possible, on the other hand, that the rule excluded some Indians who were really good men. No applications were received from Indians for some of the special appointments mentioned in the written statement. Very few Indians had received a training fitting them for most of those positions. He believed one did apply for the position of Electrical Inspector, but it was the only application received from an Indian. There were some Indians who were training for electrical engineering in Great Britain, but he knew of none who were working in the locomotive and carriage and wagon workshops of British Railways.

72,637. He considered it was almost impossible to have a competitive examination for Assistant Engineers as so much depended on the candidate's practical experience and capability of working. Testimonials were required from engineers under whom they had been employed to show that they were fit for practical work. A competitive examination was possible in India as the candidates had been under observation for a long time and their fitness was known; but if an examination was held in England for public works appointments there would be very little to go upon as to the fitness of the candidates for their work. He did not think anyone would accept a theoretical examination as the best way of obtaining engineers for India.

72,638. In the three years 1911-13, as far as selected candidates were concerned, five Indian engineering students came from the London University, two from Glasgow University, one from Edinburgh, one from Manchester, and one from no university at all.

72,639. The paragraph in his written statement alluding to the reports of the Selection Committee as showing a continuous improvement in the standard of Indian candidates, referred to the year 1910.

72,640. (*Sir Valentine Chirol.*) He had had no experience of India, although he was born there.

72,641. There was no general rule, when an appointment was made on the advice of a single individual, to determine who that individual should be. Very often the Government of India themselves suggested someone, and, as a matter of fact, did suggest the Inspector of the Home Office as a suitable person to advise, but if the suggestion had not come from the Government of India, it was very possible that the India Office would have written to the Home Office asking whom they would recommend. The head of the department would probably make enquiries as to the most suitable manner in which the selection should be made and then submit his proposals to the Secretary of State. When a special recommendation was made by the Government of India, that recommendation was not acted upon automatically but was dealt with on its merits by the Secretary of State in Council. As a matter of fact, in practice a recommendation of that sort from the Government of India would very rarely, if ever, be ignored.

(The witness withdrew.)

At the India Office, London, Wednesday, 6th May, 1914.

PRESENT:

THE RIGHT HON. THE LORD ISLINGTON, G.C.M.G., D.S.O. (*Chairman*).

THE EARL OF RONALDSHAY, M.P.
SIR MURRAY HAMMICK, K.C.S.I., C.I.E.
SIR THEODORE MORISON, K.C.I.E.
SIR VALENTINE CHIROL.
MAHADEV BHASKAR CHAUBAL, ESQ., C.S.I.
ABDUR RAHIM, ESQ.
FRANK GEORGE SLY, ESQ., C.S.I.
HERBERT ALBERT LAURENS FISHER, ESQ.

JAMES RAMSAY MACDONALD, ESQ., M.P.

M. S. D. BUTLER, ESQ., C.V.O., C.I.E.
R. R. SCOTT, ESQ. } *Joint Secretaries.*

COLONEL SIR JOHN W. OTTLEY, K.C.I.E., late R.E., M.Inst.C.E.

Written Statement relating to the Public Works Department.

72,642. I gather that the special reason that prompted the suggestion that I should give evidence before the Royal Commission is that for the last 14 years I have had peculiar opportunities—first as President of the Royal Indian Engineering College, Coopers Hill, and then as a member of the Selection Committee—of forming an opinion as to the quality of the assistant engineers appointed during that period. Quite apart from this, there are other

reasons that, I think, qualify me to express an opinion on the subject of the recruitment of the Public Works Department.

72,643. I commenced my professional career as a civil engineer in India as far back as 1858, when I was articled to the chief engineer of the Great Indian Peninsula Railway in Bombay. Consequently my personal acquaintance with India is a fairly lengthy one, whilst I have been connected with it by family ties for nearly a century, my father (an infantry officer in the H.E.I.C.'s service) having acted as an assistant engineer in the Bombay Presidency, where I was born in 1841. As a matter of fact I have been myself more or less closely connected with the Public Works Department for more than 45 years, and during that time have been associated with a great number of engineers drawn from a variety of sources, whilst many Coopers Hill men have served in India under my orders since the College was first established. Lastly, I was employed for some five months in 1894 as a member of the "Lyall Committee" which was constituted to deal with the question of the re-organisation of the Military Works and Public Works Departments, so that 20 years ago I had to make a special study of this question of recruitment.

72,644. From the wording of a communication received from the India Office, in which I am credited with possessing a "unique experience of the *quality* of the candidates who have for many years past obtained appointments in the Railway and Public Works Departments," I am not quite sure whether it is intended that I should institute a comparison between the assistant engineers from Coopers Hill and those obtained under the selection system. But in case this should be the intention, I will endeavour to explain as briefly as possible why it is really not in my power to frame any such comparison as would be of practical value. Indeed, in my judgment, the only persons in a position to form any reliable opinion on this subject must necessarily be those under whom both classes have served on actual work for some considerable length of time. I may add, however, that I take leave to doubt whether any comparison of this sort would now serve any useful purpose. It seems to me that the points of real interest to-day are—(i) how far the existing system gives us the requisite material for India; and (ii) what (if any) changes are desirable to further improve that material and bring it up to the standard required.

72,645. In the first place, it is absolutely essential to arrive at a clear understanding of what is connoted by the word "quality." I should be disposed to say that it includes qualifications under the following three distinct heads:—

(i) The technical education of a civil engineer as tested by a University diploma or equivalent examination;

(ii) The possession of knowledge of many technical matters either peculiar to or especially required in India, for instance, plane table surveying, the methods of taking discharges, the preparation of materials, Indian building construction, the accounts and rules of the Public Works Department, the methods of executing work in India, and some general knowledge of the country, its inhabitants, its geology, &c.; and

(iii) The possession of qualities that cannot be tested by any examination, but which are really far more important than any amount of technical knowledge; I mean, for instance, a high moral standard, commonsense, good temper, a sense of justice, discipline, powers of observation and initiative, and readiness to accept responsibility.

72,646. Now, under the first head I do not think that there is a pin to choose between the *best men* appointed from Coopers Hill and the *best men* obtained under the present system. In either case, however, the term "best men" under this head only covers a comparatively small percentage of the total number of candidates. As regards the balance, I am distinctly of opinion that—*taking this test alone*—the *average* product of the selection system compares favourably with the average Coopers Hill student. This is only what might have been expected as only men up to the diploma standard appear before the Committee.

72,647. Before passing on, I think it desirable to invite attention to a fact which, it seems to me, is often lost sight of, viz.:—that it is quite unnecessary that the whole or even a large proportion of the recruits should hold very high academic distinctions. I think all experience goes to show that it is by no means those who possess the greatest amount of "book learning" who turn out to be the most valuable officers. Of course, it is desirable that a certain number should be thus distinguished, but it should at the same time be borne in mind that the vast mass of the work to be done does not require these qualifications and that to employ a "1st class Honours" man for years together in carrying out the ordinary work of the Public Works Department is very much on a par with using a razor to chop wood blocks with, and very often results in completely spoiling both the instrument and the work. In short, for the ordinary work of the Department, the qualities outlined in head (iii) above are really of far greater importance than any amount of high technical and mathematical knowledge.

72,648. Turning now to the 2nd head (ii above) I would explain that every Coopers Hill student acquired more or less knowledge of these special matters whereas the recruits obtained under the selection system are necessarily almost invariably ignorant of them. It is, of course, quite true that this knowledge can be gradually picked up at a later stage after reaching India, but the broad fact remains that—*under this head*—the assistant engineers appointed from Coopers Hill were better fitted *on joining* to carry out the duties required of them than are the men now being sent out under the selection system.

72,649. It is, however, under the third head, *the possession of qualities that cannot possibly be tested by any form of examination*, that the difficulty of forming any reliable comparison becomes positively insuperable. At Coopers Hill the students were under my close observation both at work and play for three years, and I was, therefore, in a position to frame a fairly accurate estimate of what they really were. During the course I was able to weed out a certain number of undesirables, whilst in many cases the rough diamonds entering the College were cut and polished out of all recognition when they left Coopers Hill. A high moral tone and strict discipline was insisted on and a strong *esprit-de-corps* was fostered, which undoubtedly made for good results subsequently. I felt, therefore, fairly certain that, at any rate, a large proportion of those completing their course would develop into really good officers. Under the selection system, on the other hand, we know little or nothing of the candidates under this head, and the result is consequently very much a matter of chance. It is only possible to form a crude guess at these matters from a perusal of the letters of recommendation sent in and a short ten minutes' interview with each candidate. I have absolutely no doubt whatever that under the new system we have been able to nominate a very fair number of exceedingly good recruits, but I should hesitate to speak with any confidence as to others who may or may not eventually be found to possess the qualities essential to the making of a good and reliable officer.

72,650. So much was I impressed with these facts and also with the want of knowledge of the special technical matters referred to above, that after the closure of Coopers Hill College, but prior to the sale of the property, I suggested to the then Permanent Under Secretary that an ideal system would probably be to select the men as at present and to then send them for a year or two to Coopers Hill for instruction in the matters referred to, thus also affording some opportunity of ascertaining what the men really were as opposed to merely what they knew. It seemed to me that in this way it might also be possible to secure some continuity of the *esprit-de-corps* to which I attached considerable importance, and which I thought it desirable to preserve for the benefit of the service. My proposal was, however, considered to be outside the range of practical politics, and was, therefore, dropped.

72,651. From what has been said above, it will, I hope, have been made clear why it is impossible for me in the circumstances to formulate any comparison

between the products of the two systems with which I have been so long connected.

72,652. I have already said that in my judgment the really important points for present consideration are as to whether the present system affords the requisite material and whether any further change can be recommended. I propose in the following paras. to deal separately with the question of the selection respectively of European and native assistant engineers.

72,653. As regards *European assistant engineers*, I am unable, as matters stand, to suggest any better plan than that which now obtains, except that I should not be disposed to lay much, if any, stress on the supposed necessity for practical training in this country, and would strongly recommend that every man selected should be sent out *on probation* for three years, by which time the authorities in India ought to be able to decide whether he is worth retention or not. It seems to me that no man worth having need fear this test, whilst if any undesirable should be eliminated it would certainly be to the advantage of the service and of India generally. It should, of course, be provided that any man thus sent back at any time during his period of probation should be provided with his passage back, as also his salary to date of landing in England, unless he be dismised for some serious fault beyond mere unsuitability for the service.

72,654. Turning now to the class of *native assistant engineers*, I must record my matured conviction that it is radically wrong to make these appointments in England. I originally formed this opinion at Coopers Hill, where we had quite a number of native students, and the view then formed has been strengthened each succeeding year. It is an opinion, moreover, fully shared by every officer—both of the Public Works Department and the Indian Civil Service—with whom I have discussed the question, and also by natives themselves, both parents and candidates. I hold that it is absolutely wrong on principle to induce young Indians to come to this country on the mere chance of securing a valuable prize. Whilst Coopers Hill lasted, the evils were greatly minimised because, if a candidate failed at the entrance examination, he had at any rate lost comparatively little money or time, whilst if he succeeded in entering the college he had a fair chance of an appointment, and was, moreover, well looked after during his stay in England. Under the selection system on the other hand, the candidate is compelled to reside in this country for some three or four years at an expenditure running into many thousands of rupees, with, in many cases, no one to look after and care for him. At the end of his studies he has about a one in ten chance of being selected, as there are only some two or three appointments annually available for some 20 or 30 applicants. The vast majority must, therefore, return to India without a Government appointment, and with very little hope of obtaining any other employment. Can it therefore be wondered at that all these unfortunates go back to India thoroughly disappointed, disheartened and dissatisfied, and full of resentment at a system which has led to their incurring such heavy losses? It may not be out of place here to point out that some at any rate, and I think an increasing number of these candidates are the sons of subordinates in the Public Works Department, Supervisors and Overseers, drawing comparatively small pay, who can certainly ill afford to risk the loss of so large a sum as, say, £1,000 and who certainly ought not to be tempted to incur that risk.

72,655. I have endeavoured to show above that the system is wholly wrong whether we regard it from the point of view of the parent or the candidate. It is equally unwise from that of Government, as the Committee have absolutely no knowledge of the candidates, and it is far less easy to be sure that the most suitable men are chosen from amongst the native candidates than is the case with the Europeans, and this, as already pointed out, is by no means a simple problem. Quite apart from this, there is the further difficulty that a man so chosen in London is as likely as not to be posted to any province but his own, and in that event will be quite as much a "pardesi" or "foreigner" as any European, having to learn a new language, and being out of touch with everything and everybody. On the one hand he will not have the prestige of the European, nor the support, sympathy, and social amenities of the people of the country. In short, he will be in all probability a veritable Ishmael with every man's hand against him.

72,656. The only possible remedy appears to me to be that native assistant engineers should be appointed in India on the recommendation of local Governments and administrations who should be required to employ the men so recommended in their own territories. In my judgment there is absolutely no necessity for insisting in their case on a course of training in this country; indeed, I am inclined to think that more useful men from the departmental standard could be secured from the Indian colleges.

72,657. So long as native assistant engineers are appointed in this country under the existing system, so long will it be necessary to appoint them on exactly the same pay and conditions as the Europeans appointed at the same time, and it was on the assumption that the Secretary of State might consider it necessary to adhere to these grants that I suggested some 15 months ago that the Government of India should be permitted to allot the small number of appointments thus available as special prizes to the various engineering colleges to be awarded to men of the different provinces in turn. I desire, however, to record my opinion that there is really no justification for offering to natives of India the salaries that are held to be necessary to secure the right stamp of European for the Indian service. I base this opinion solely on the fact, which I do not think anyone would care to deny, that the necessary expenses of a European Engineer in India are vastly greater than those of a native doing precisely the same work, so that the salary on which a European manages to live decently is really a splendid salary to a native, who probably is able to save three-fourths of it. To make this quite clear, I would point out that the salary that our young assistant engineers could hope to draw in England would certainly not be in excess of £100 to £150 a year, whilst many of them would be glad to get £50 a year. In order to induce these young men to take service in India, it is thought proper to offer them a commencing salary of Rs. 4,560, or, say, £300 a year, and we offer the same salary to young natives, some of whose parents, to my knowledge, cannot be drawing half that amount after, perhaps 30 or 40 years' service. I would invite attention to the fact that the present system of paying native assistant engineers recruited in England far higher salaries than those paid to their countrymen appointed from the Indian colleges, who are performing precisely similar work, must necessarily cause great heart-burning, and will, I believe, lead to trouble hereafter. It is also unfair to the finances of India that more pay than is warranted is disbursed to the men in question.

72,658. It appears to me that the justification for the employment of Europeans is the belief that they render more efficient service, whilst their salaries have been fixed on the ground that they cannot be obtained for less money. As soon as it can be shown that the work can be performed equally well by native and therefore cheaper agency, the latter may be expected to replace the European much to the advantage of the finances of the country. It is obvious, however, that nothing is to be gained by unnecessarily levelling-up the salaries of the men of the country.

72,659. It may not, perhaps, be out of place if I add, in conclusion, that no matter how good the system of recruitment may be, full value will never be obtained unless care is taken to see that all promotions are made on the score of merit alone and not on the ground of mere seniority. The man who appears to be best fitted for any special work or post should be selected for that work or post without regard being paid as to how he entered the service, or whether he has or has not followed the regular course of promotion. On the other hand, inefficiency—from whatever cause it may arise—should be dealt with far more drastically than was often the case during my service in India.

Colonel Sir JOHN OTTLEY, called and examined.

72,660. (*Chairman.*) The witness was President of Coopers Hill from 1899 to 1906, and was now a member of the Selection Committee for the Public Works Department and the Engineering branch of the Railway Department.

72,661. The selection of men for engineering appointments was made on a variety of qualifications, but as he had said in his written statement, it was quite unnecessary that the whole or even a large proportion of the recruits should hold very high academic distinctions. Every assistant engineer ought to have a certain amount of technical training, but he should not attach particular importance to First-class Honours. There had been a tendency rather to look upon a man who had taken First-class Honours as necessarily a very much better man than a man who had simply taken a pass degree, but his experience had shown him that in very many cases the honours man was more or less of a bookworm and often not quite so good at practical work. In selecting candidates he accepted any pass degree as a suitable qualification. If a man was undoubtedly better in other respects, he attached a certain amount of importance to an Honours Degree, as it showed that he was a good man all round, but he would not pit an Honours Degree against other qualifications.

72,662. On the whole he thought the Coopers Hill training, all round, was better than anything in existence now. Comparing the present system of selection with pure examination, he thought the system of selection was the better of the two, because a great many men who were good on paper in an examination utterly failed afterwards. Some of the very best men in India had been Stanley men, but some very poor specimens had got in by passing an examination. Therefore, he preferred a system of selection of the kind that was now in force. Fairly accurate information was obtained with regard to character and disposition, but he was not altogether satisfied in this respect. For instance, questions were put such as: "Do you consider that the candidate is likely to be able to work satisfactorily with natives of India?" "Is he suited for the business of the Government of India in this Department?" and these questions went to people who knew nothing whatever about India or Indians or the department, and invariably the reply was "Certainly," and such opinions were absolutely worthless. There seemed to be no remedy for that, but he had recently suggested that the questions might be re-cast. The best remedy he could suggest would be a definite probation of three years, and if a man was good he had nothing to fear. If he was not a good man the sooner he left the Service the better. He did not think such a rule would keep a man out of the Service as there was such enormous competition in England at the present moment in the engineering branch that there would be no difficulty in obtaining men. He regarded probation as essential.

72,663. On the Selection Committee there was no one with any recent experience of India, but the constitution of the Committee was a matter for the decision of the Secretary of State. It would probably assist the Committee in their work if a senior officer of the Service was on it, but it would be necessary to be very careful in selecting the officer.

72,664. Plane table surveying was taught in some of the engineering colleges, but he had had many candidates before him who had never used a plane table and knew nothing at all about river discharges.

72,665. There was one matter which was really very important for India. A young engineer went out to the country and found he had to do everything from the start. If he had to build, he had to find in many cases his brick-earth and had to make bricks, learn to burn lime, and do many things which were quite new to him. In England he would go to a contractor and buy everything ready made, but in India he had the preparation of the materials as well as the building. That was a thing that was taught at Coopers Hill as far as possible, but nothing of the kind was now taught in any of the colleges. At present the training in the colleges was more or less a mathematical training and not a practical training. That training had to be picked up gradually, and could hardly be picked up anywhere else than in India, but students might be given in the course of their training some foundation on which to work.

72,666. He would like to see Indians recruited to the service in India. He objected to sending Indians to England to be trained, because he thought it was a very cruel thing to do. He would have Indian officers in future appointed by selection in India, and even where there was an Indian who had been trained in England—and he did not think any Indian should be trained in England—the Secretary of State should send out particulars to India, and the selection should be made in that country.

72,667. With regard to the observation in the written statement, that at he end of his studies the Indian assistant engineer had about a one in ten chance of being selected, as there were only some two or three appointments annually available for some 20 or 30 applicants, he did not mean that there was a considerable number of Indians in England who were qualified to occupy positions as assistant engineers. They had their diplomas, but he did not think they had the other qualities, and there was no means of testing them. In many cases they were not the right stamp of men for the engineering profession. On the last occasion there were about 30 Indian candidates who had gone through courses in England, costing their parents from Rs. 12,000 to Rs. 15,000, money which might have been borrowed. Yet there could not possibly be more than one in ten who could get an appointment under the present system. He believed that 21 out of the 31 applicants had diplomas. They were all at the colleges, but some had not qualified, and there were only three appointments for the 21 candidates who actually held diplomas.

72,668. A diploma was no test of whether a man was fitted to be an engineer or not. There were points of character infinitely more important than any amount of technical education. On the technical side he did not consider that the diploma represented a sufficient qualification for the ordinary work of the Public Works Department. He would rather insist on practical experience than on technical training if it was necessary to choose between the two. Of course, for certain purposes it was necessary that a man should have high mathematical qualifications, but for the ordinary work of the Department such qualifications were absolutely not required.

72,669. It had been the rule of the selection committee to give preference to men who had had a year or more of practical experience. He was very doubtful about this so-called practical experience, because it was really not practical experience. A man would come forward and say he had been engaged on such-and-such works, and would give a list which would lead one to suppose that he had been actually engaged on the works, but when cross-examined on the subject it would be found that he had simply been to look at them. There were many cases where men had actually been employed and were good enough to be paid for their work, but in a very large number of cases that was not the case, the so-called practical experience simply amounting to the preparation of tracings in the drawing office. The difficulty was that a man who was going out to India paid a premium of 50 to 100 guineas for a year's training, and the people in charge of the works naturally had very little interest in him; they pocketed the premium and did very little in the way of teaching. In the case of Englishmen they often did not charge a premium at all, but took a lot of trouble with them, and during the second or third years they got their money back by making them useful. The men for India were *simply lookers-on.* A man might have been employed for only six months on works, but if his employer had found him valuable enough to pay for his services, that showed that he was useful. Hitherto the idea had been general that unless a man had a year's practical experience he would not be accepted, but he had had very largely to discard that idea, and therefore he was thrown back on the theoretical qualifications, the candidate's recommendations, and the

answers the man himself gave during his 10 minutes interview. It would be a good thing to have more than a 10 minutes interview, but it was quite possible in many cases after that time to say that a man was suitable. The rule guiding him was to put himself into the place of an employer and ask himself whether he would take the man on.

72,670. The material for selection was nothing like so strong as it looked on paper. There were a great many men who could be thrown out almost at sight. He was not opposed to examination after selection. Better practical experience could be obtained by probation in India, and after a man was selected he should go straight out to India to gain that experience, and it would be quite possible to say after three years in India whether the man was fit to be retained or not.

72,671. (*Sir Murray Hammick.*) It was possible that, owing to the frequent change of superior officers, it might be difficult in two or three years to tell what the real value of a probationer was. No doubt it would be a difficult thing for a superior officer in the Public Works Department to make a selection in India after a three years' trial, and the chances were that unless the man was very bad he would remain in the Department, but the authorities in India would at any rate have had the opportunity of finding out whether a man was or was not suitable, and this would be an improvement on the present system.

72,672. With regard to the colleges in England to which Indians went for training, it could not be said that there was any special college. Of those that appeared before the Committee this year five came from Edinburgh, four each from University College and the City and Guilds Institute, three from Glasgow and one each from Armstrong College, King's College, Cambridge, Manchester, and Liverpool.

72,673. When he found that the training had been really practical he placed great value upon it; in other cases the value he attached to it was very small.

72,674. (*Sir Valentine Chirol.*) He did not think that there was any need for a redistribution of the work done by members of the Public Works Department when they got out to India. Young engineers, whether assistants or executives, in the majority of cases did not require high mathematical qualifications. What he had in his mind was the fact that a good many men of very high qualifications had proved absolutely useless in practical work. He knew many men of his own time, Royal Engineers, Stanley engineers and Coopers Hill men, who were head and shoulders, from the mathematical point of view, above their compeers and yet were absolutely useless for practical work. That seemed rather to show that much of the work which engineers were put to when they first reached India was not the work on account of which they were recruited; they were chosen to do a very much higher class of work and when they got to India they were put to work of a very different character, and when the time came for them to take on first-class mathematical work they had lost to some extent the power of doing it. He did not think that could be remedied by any redistribution of the work done by the Department in India, because not only high mathematical qualifications in certain instances were required but experience to use those qualifications, and that could be only obtained on work. The young engineer might be used as an assistant to an officer on a big design, but at first he could only carry out the orders of somebody else. He was afraid it was impossible to relieve the engineer of the prolonged burden of so-called inferior work during the first few years, because there were very few higher posts, and they required experience, and in the meantime all the work of the Department had to be done by people who could do it with very much lower qualifications. The ordinary work which had to be done by the Department was very humdrum work indeed, such as road maintenance and construction and survey work.

72,675. (*Mr. Abdur Rahim.*) He was not inclined to say that the education of an engineer in England was higher than it was possible to get in India, and so far as the engineering service was concerned it would be possible to recruit from Indian engineering colleges. He did not see any reason why it was necessary to recruit Indians from England at all. The European could not be recruited in India, and he had never come across an Indian who was the equal of the English engineer on the work. He did not say that the Indian engineer could do the work expected of him; what he said was that the education in the Indian colleges was as good as that in the English, but, as he had said over and over again, the education was a very minor consideration. There was no question of race involved. As soon as Indian engineers could be got to do the work as well as Europeans, then by all means they should be employed. Since 1903 Indian engineers had been sent out, and it was for India to say whether they had done their work to the satisfaction of the authorities in India. He was not in a position to say whether Indian engineers trained in Indian colleges did their work as well as Indian engineers trained in English colleges. The only persons capable of giving an opinion on this point must be those on the spot who could make the comparison.

72,676. With regard to the statement in his memorandum that "in order to induce the young men to take service in India, it is thought proper to offer them a commencing salary of Rs. 4,560, and we offer the same salary to young Indians, some of whose parents, to my knowledge, cannot be drawing half that amount after 30 or 40 years' service," he did not mean by that that the young Indian engineer was not to be paid a salary larger than his father had been getting, but he did not think he was the class of man to be put in a position of control over a large number of people, and, therefore, he was not a man to be an assistant engineer. That was not necessarily because his father had been in a subordinate service. When he wrote that paragraph he had in his mind that it was not a satisfactory thing for a man in the position of a subordinate to spend an enormous amount of money on sending his son home to England merely on the chance of getting double the pay that his father was drawing at the end of 30 or 40 years' service. It was not intended in any way to be an offensive statement.

72,677. There had been no Indian member on the Selection Committee.

72,678. (*Mr. Fisher.*) The number of officers recruited each year varied. In 1912 there were only 19 whilst in 1913 there were 33 vacancies. Some years ago there were as many as 234 applicants for about 30 vacancies, but at present there were about 130 applicants for the same number of vacancies, the number of applicants being on the decline. It was difficult to say what that decrease was due to.*

72,679. The Selection Committee did not make a point of approaching the different engineering schools, and it might be a good plan to send round to each of the colleges in order to get some information about the men on the spot. He did not think it would be practicable to give to each of the principal engineering colleges in England a certain number of places and put the responsibility upon the heads of those colleges to recommend candidates, at the same time asking the colleges to undertake to give instruction in those particular branches of engineering knowledge which were directly applicable to India, such as used to be given at Coopers Hill. One year a large number might come up from one particular college, and in the following year there might not be a single man from that college. The principals were asked to place the men as far as possible in order of merit, but it was very rarely that the Selection Committee took precisely the same view as the principals in regard to the relative merits of candidates.

72,680. If an Indian showed any special bent in any particular direction, it might possibly be useful to bring him over to England for further training. That was reverting to what took place some 40 years ago, when two assistant engineers were sent over for

* The witness subsequently wrote:—It is probably due to the fact that the conditions of selection are now better understood by applicants, because it appeared that of the 234 candidates who applied in 1909 only 103 came before the Committee, the remainder having been ruled out as not fulfilling all the conditions laid down. On the other hand, out of the 136 candidates applying in 1914, no less than 91 came before the Committee. It would, therefore, seem that the number of qualified candidates has not really diminished to any serious extent.

special training. He would not lay down any definite number to be sent over each year, but leave that to be fixed as men were found to be available.

72,681. It was quite true that while the Indian engineering colleges could give a training in civil engineering as good as could be obtained in England, they might be behind English colleges in mechanical engineering and electrical engineering, but he was not dealing with either of those branches, but simply with civil engineering, such engineering as would be taught at Sibpur College and the Thomason College. For all purposes of the Public Works Department, he thought those Indian colleges gave a better education than was given in England, or certainly as good.

72,682. (*Mr. Sly.*) The Selection Committee were responsible for the selection of engineers required for Indian railways as well as for the Public Works Department, and as far as possible every man selected for a railway appointment had at least one year's training on a large railway in England, and he believed that in the present year every man had had considerably more, some having two or three years' experience. It would be a good thing if that was made a definite condition of recruitment to the railway service. It was no use sending a man on to a railway unless constructional work was going on. It was difficult to secure facilities in England for candidates, but it should be made somebody's business to see that it was done.

72,683. The Indian Public Works Department compared very favourably with other openings for young engineers in point of attractiveness. It was largely a question of money. At present the Indian Public Works Department attracted a really good standard of engineering students.

72,684. With regard to the 10 per cent. rule, it was laid down that the committee had to select at least 10 per cent. of Indians, and he knew of no rule which permitted more than 10 per cent. to be selected if qualified candidates were available. The standard of Indian candidates had varied considerably. In the early days the committee had selected three Indians and had reported that had they been Europeans not one of them would have been chosen, but since then the standard had so improved that, so far as technical qualifications were concerned, many men could have been selected had the 10 per cent. rule not been in force and it became increasingly difficult to select the best two or three men. In saying this, he was merely comparing Indians with Indians and not with Europeans. There were certain specific degrees of engineering colleges which were accepted as qualifications, amongst them the qualifications of the Institution of Civil Engineers. Some of the qualifications were very likely to be considerably altered. A Past President of the Institution of Civil Engineers sat on the last Selection Committee and had taken note of several of the cases. In the case for instance of one of the colleges it was said that the degree was accepted with advanced mathematics, but when he came to cross-examine on the matter he found there was no examination in mathematics at all, and that the student had merely attended certain mathematical lectures; whether he had benefited from them at all there was nothing to show.

72,685. He doubted very much whether a great deal of work which formerly used to be done by assistant engineers had now been transferred to the Provincial Service and that assistant engineers had now to discharge much higher duties than used to the case.

72,686-75,143. (*Lord Ronaldshay.*) The Selection Committee had nothing to do with telegraph engineers. He had been told that mechanical engineering and electrical engineering were better taught in this country than in India, but he had no knowledge on the subject.

(The witness withdrew).

APPENDIX I.

(Referred to in paragraph 71,285—Mr. R. P. Russell's evidence.)

Note by Mr. R. P. Russell, Secretary to the Government of India in the Public Works Department, relating to the percentage of officers appointed to the Public Works Department in England and from the Engineering College at Rurki, who have risen to Administrative Rank.

1. During my examination on November 17th by the Royal Commission the question was put to me whether it was not a fact that a greater proportion of officers, appointed from the Indian Engineering College, Rurki, had been selected for appointment in the administrative grades, than in the case of officers appointed by the Secretary of State in England—the object of the question I understood was to indicate that the average qualification of officers appointed from the Indian Engineering College was higher than of those appointed in England.

2. I expressed my doubt if an examination of the records would substantiate the assertion.

3. It is obvious that the matter can only be tested by taking the figures for both cases over the same period; it would, for example, lead to a false conclusion if the percentage of all the Engineers from the Engineering College, Rurki, who have risen to administrative rank since, say, 1850, were compared with the percentage of officers who have been appointed in England and have risen to the same rank since 1870.

I attach a statement showing in both cases the number of appointments made from the year 1872 —the year in which the first appointments from Coopers Hill were made—to the year 1893 (no officer appointed later than 1893 has yet reached administrative rank) and the number of men in each case of each year who subsequently rose to administrative rank substantively. The result shows that out of a total of 513 officers appointed in England during the 22 years under consideration, 172 or 33·5 per cent. reached administrative rank. Out of a total of 168 officers appointed from Rurki during the same period 38 or 22·6 per cent. reached administrative rank. The assertion made is therefore incorrect and consequently the deduction from it.

PUBLIC WORKS DEPARTMENT (including RAILWAYS).

Year.	Appointments from the Cooper's Hill College.		Appointments from the Rurki College.	
	Number appointed each year.	Number of Officers of each year who reached administrative rank.	Number appointed each year.	Number of Officers of each year who reached administrative rank.
1872	1	1	13	1
1873	6	4	16	6
1874	43	19	22	2
1875	42	16	15	—
1876	38	14	8	5
1877	47	13	8	2
1878	41	15	8	3
1879	42	12	7	3
1880	35	15	*	*
1881	34	11	8	4
1882	29	12	8	2
1883	16	6	8	3
1884	13	7	8	1
1885	13	7	5	2
1886	15	5	5	2
1887	15	2	4	1
1888	14	6	4	—
1889	15	2	4	1
1890	15	3	5	—
1891	15	1	4	—
1892	12	—	3	—
1893	12	1	5	—
Total	513	172	168	38
	33·5 %		22·6 %	

* No recruitment from Rurki in 1880.

APPENDIX II.

(Referred to in paragraph 71,570—Lala Wazir Chand Chopra's evidence.)

Note by Lala Wazir Chand Chopra relating to the percentage of officers appointed to the Public Works Department in England and in India who have risen to administrative rank.

Taking the Government of India lists, which deal with the whole of India, except Railways, Bombay, and Madras, for the last 5 years (I have taken those for June each year), we get the following figures in Administrative ranks:—

Year.	Indian College Engineers.			England-trained Engineers including Royal Engineers.			Grand Total.	Total percentage of Indian College men, *i.e.*, percentage of column 4 over column 8.
	Chief Engineers.	Superintending Engineers.	Total.	Chief Engineers.	Superintending Engineers.	Total.		
1	2	3	4	5	6	7	8	9
								per cent.
June, 1909 ...	5	18	23	9	41	50	73	32
June, 1910 ...	4	19	23	9	38	47	70	33
June, 1911 ...	4	18	22	8	38	46	68	33
June, 1912 ...	3	19	22	10	41	51	73	30
June, 1913 ...	3	17	20	12	42	54	74	27
Average percentage.								31

The corresponding recruitment can be taken by striking the average of the 3 years 1888-1890. This will give an average difference of 22 years; which is the average length of service for Administrative ranks. The figures are as follows:—

Year.	Men recruited in India.	Men recruited in England including Royal Engineers.	Total.	Percentage of Indian recruits over the total, *i.e.*, of column 2 over column 4.	REMARKS.
1	2	3	4	5	6
				per cent.	
1888	2	9	11	18	The recruitment is taken only in those Branches and Provinces which are at present included in the Government of India list to make the comparison with years 1909–1913 correct.
1889	7	12	19	37	
1890	4	11	15	27	
Average percentage.				27	

Thus although the average percentage of recruitment of Indian College men was about 27, their percentage in Administrative ranks is 31. At the time of the last Public Service Commission the general percentage of Indian recruitment was 30, and 31 is better than that even. The present day percentage of Indian recruitment is still lower, namely, about 20. Since this Administrative rank percentage of 31 is better than all the percentages of recruitment, I draw the inference that the percentage in Administrative ranks of Indian College Engineers is better than the proportion of their respective recruitments.

APPENDIX III.

(Referred to in paragraph 71,667—Mr. F. M. Purves' evidence.)

Conditions of Temporary Employment in the Public Works Department with form of Declaration for Temporary Engineers.

A. *Conditions of Temporary Employment in the Public Works Department.*

(For temporary employés on pay higher than Rs. 250 per mensem engaged for a particular work or for those whose appointments have been sanctioned by the Government of India.)

I.—Persons engaged temporarily will be on the footing of monthly servants, and their employment carries with it absolutely no claim to pension, or to any absentee allowances beyond those conditionally given to temporary employés under Articles 201 (Note), 242 (*a*), 336 (Rule 1) and 339 (Rule 2) of the Civil Service Regulations.

II.—The services of such employés may be dispensed with at any time without notice in case of serious misconduct on their part—and otherwise after one month's notice, or on payment of one month's salary in lieu of notice. Also with or without notice their engagement will cease absolutely on the completion of the work in connection with which their appointments may have been sanctioned by either the Government of India or the Local Government. Should they desire to resign their appointments they wlil be required to give a month's notice of their intention to do so or to forfeit a month's salary in lieu of such notice.

Extract from the Public Works Department Code and from the Civil Service Regulations.

Public Works Department Code (Ninth Edition), Chapter I, para. 111, Rule IV.

Rule IV.—Persons engaged locally will be on the footing of monthly servants, and they must be clearly informed in writing that their employment carries with it absolutely no claim to pension or to any absentee allowances beyond those conditionally given to temporary employés under Article 201 (Note) 242, 336 (Rule 1) and 339 (Rule 2) of the Civil Service Regulations, and they must be required to sign a declaration that this is clearly understood by them. As soon as they have joined their appointments, the fact should be reported to the Government of India, in order that the transaction may be reported to the Secretary of State, *vide* clause (1), Rule III, para. 361. If they are engaged for a special work, their engagement lasts only for the period during which the work lasts. If dismissed otherwise than for serious misconduct before the completion of the work, they will be entitled to a month's notice or pay in lieu of notice; but otherwise, with or without notice, their engagement terminates when the work ends. If they desire to resign their appointments they will be required to give a month's notice of their intention

to do so or forfeit a month's pay in lieu of such notice.

The terms of engagement should be clearly explained to men employed under the circumstances mentioned in this order.

Article 201. *Note.*—[The rules providing for the grant of leave to an officer who has a temporary or officiating appointment only are contained in Articles 242, 336, Rule 1, and 339 of Rule 2.]

Article 242 (*a*).—An officer, who has a temporary or officiating appointment only may be allowed Privilege leave, without losing his lien on such appointment, if no substitute is required, or if his duties can be provided for without additional expense.

Article 336.—Leave on Medical Certificate may be granted for three years in all, but not for more than two years at one time; and no officer can have leave on Medical Certificate out of India more than twice.

1.—An officer who has a temporary or officiating appointment only may be allowed leave under this Article for not more than three months, if no substitute is required, or if his duties can be provided for without additional expense.

Article 339.—Extraordinary leave without allowances, may, in case of necessity, and when no other leave is by Rule admissible, be granted for such time as may be necessary. Time spent on leave under this Article does not count as service for other leave. Subject to the provisions of Article 198, there is no limit to the length or frequency of leave under this Article. It may not be granted in combination with the grant of other leave except as provided in Article 233. But it may be granted in continuation of other leave if circumstances arise which prevent the return by the officer to duty, and which, in the opinion of the Local Government or the authority empowered to grant the leave, are such as to justify the concession. No officer is *entitled* to Extraordinary leave.

* * * * * *

2.—An officer who has a temporary or officiating appointment only may, at the discretion of the Local Government or the head of the officer's office, be allowed leave under this Article for not more than three months.

B. Form of Declaration for Temporary Engineers.—I do hereby declare that I have been made acquainted with the conditions prescribed for temporary employés in the Public Works Department, as laid down in Chapter I, para. 111, Rule IV, of the Public Works Code (Ninth Edition); that these terms are clearly understood by me, and that I am willing to accept employment under them.

APPENDIX IV.

(Referred to in paragraphs 71,667-68—Mr. F. M. Purves' evidence.)

Memorials of certain Temporary Engineers and connected correspondence, as follows:—(I) *To His Honour the Lieutenant-Governor of the Punjab;* (II) *To His Excellency the Viceroy, enclosing Memorial to His Honour the Lieutenant Governor of the Punjab, with reply;* (III) *Connected Correspondence.*

(I) To His Honour
The Honourable Sir Michael Francis O'Dwyer, K.C.S.I., I.C.S.,
Lieutenant-Governor of the Punjab and its Dependencies.

The humble Memorial of
Temporary Engineer, Irrigation Branch, Public Works Department, Punjab.

Dated the 1913.

Sheweth

That Your Memorialist is employed as a Temporary Engineer in the Irrigation Branch of the Public Works Department in the Punjab.

That he has served the Government faithfully and to the best of his ability since he was appointed.

2. That up to June 1908 the last sentence of sub-para. 1 of para. III of the Public Works Department Code, Volume I, 1907, fixed the salaries of all Temporary Engineers at a maximum of Rs. 950 per mensem. That in 1908 that paragraph was cancelled, and that such cancellation led to the natural belief that the maximum salary of a Temporary Engineer would not be, in the future, restricted. That there are several Temporary Engineers all over India, with salaries ranging from Rs. 750 to Rs. 1,250 per mensem.

3. That Your Memorialist has only lately been informed of the contents of letter No. 1700 E., dated 20th December, 1911, from Secretary to the Government of India, to Secretary to Government, Punjab. That the above quoted letter limits the increments which may be earned by Temporary Engineers to Rs. 50 per mensem after two years of approved service; and his salary to a maximum of Rs. 700 per mensem.

4. That Your Memorialist most respectfully submits that a decision so momentous to Your Memorialist's future prospects and position, and so much at variance with Your Honour's well known equity, should not, in justice, have been kept from Your Petitioner's knowledge for nearly nineteen months.

5. That Your Memorialist is forced to conclude that such stringent restrictions of Your Petitioner's prospects were ordered, without due consideration of the conditions of Your Memorialist's service, and Your Memorialist's just expectations.

6. That Your Memorialist's conditions of service are briefly as follows:—

(*a*) Liability to dismissal with one month's notice without cause assigned.

(*b*) Absence of all title to pension or gratuity.

(*c*) Dependence of increments to salaries and retention of service entirely on the reports of the immediate superior, appreciation by the recommending authority, and, finally, approval of the same by the Local Government and Government of India.

(*d*) A higher quality of work expected than that demanded of Permanent Engineers in spite of mental strain consequent on disabilities (*a*), (*b*) and (*c*).

7. That by the Re-organisation of 1908 and the subsequent Resolution of Government, the prospects of all classes of Permanent Engineers were enhanced.

8. That when the emoluments of the Permanent Establishment of the Public Works Department were increased, Your Memorialist was filled with great hope that Your Honour's Government would forthwith proceed to enquire into the case of the establishment of Temporary Engineers, and that their disabilities would be ameliorated. That, therefore, Your Memorialist is unable to grasp the reason if any, why Your Memorialist's just expectations of similar treatment have been nullified, and Your Petitioner's prospects thus curtailed.

9. That the attitude of the Government, as indicated by the letter of the Secretary to the Government of India, in the Public Works Department, quoted above, has shattered every hope of advancement. That Your Memorialist, suffering under a sense of uniformly unsympathetic treatment, will be slowly but surely crushed beneath the weight of burdens imposed by the Government, Your Memorialist has served with such ability as has, to Your Memorialist, been given.

10. That, considering all the indications which have from time to time been revealed by the Government of unsympathetic treatment meted out to Temporary Engineers, Your Memorialist may be pardoned in arriving at the conclusion that Your Memorialist's position is gradually becoming more and more untenable. That Your Memorialist may be further pardoned for humbly submitting that such treatment is foreign to the whole tenour of that justice which is the treasured tradition of a Great Government.

11. That Your Memorialist humbly and respectfully prays that Your Honour will be pleased to forward this Memorial to His Excellency the Viceroy, and to recommend the following reliefs, *viz.*:—

(*i*) The withdrawal of the order fixing the maximum pay of *Temporary Engineers* at Rs. 700 per mensem, and increments at fifty rupees every second year, and

(*ii*) Sanction to Your Memorialist remaining eligible for such increases of salary for which Your Memorialist may from time to time be recommended, and this on some recognised basis.

And Your Memorialist will ever pray, &c.

(II) To His Excellency
The Right Honourable CHARLES
BARON HARDINGE OF PENSHURST,
G.M.S.I., G.M.I.E., K.C.B., etc.,
Viceroy and Governor-General of India
in Council.

(Through proper channel).

The humble Memorial of , Temporary Engineer, Irrigation Branch, Public Works Department, Punjab.

Dated the 1913.

Sheweth:—

That Your Memorialist is employed as a Temporary Engineer in the Irrigation Branch of the Public Works Department in the Punjab.

That he has served the Government faithfully and to the best of his ability since he was appointed.

2. That in November, 1912, Your Memorialist submitted a Memorial to His Honour Sir Louis William Dane, then Lieutenant-Governor of the Punjab, setting forth his grievances and praying that a recommendation be made to competent authority, for such relief as might seem just and proper in the circumstances.

3. That the reply received from His Honour the Lieutenant-Governor—a copy of which, together with copy of original Memorial, is attached as Appendices (*B*) and (*A*) is so extremely unsympathetic and disappointing, not to say disheartening, that Your Excellency's Memorialist is constrained to appeal to Your Excellency's acknowledged sympathy, for a consideration of Your Memorialist's grievances.

4. That His Honour's reply to paras. (1), (2), and (6) of Your Memorialist's original Memorial does not appear to recognise the fact that the establishment of Temporary Engineers has steadily increased from its inception in 1891; showing that the tenure of office has been accepted by all concerned as practically permanent; and that Temporary Engineers are in no sense of the word the casual employees for which the rules in the Civil Service Regulations were designed, and subject to which they have to work.

That, if it had been the intention of Government merely to employ men to suit requirements, Your Memorialist humbly submits that it would have been fairer to have dispensed with their services after three, four or five years and to have engaged others. That there would then have been no mistake as to the intentions of Government, and it would have become evident that men of the class needed would not have been obtainable at the salaries accepted, in the just hope of good prospects. That by retaining their services for ten, fifteen and twenty years Your Memorialist submits what Your Memoralist ventures to think Your Excellency's justice will allow, that such men have earned a lien on their appointments, and that Government is thereby under a moral obligation to provide for their futures (they being trained specialists and unable to gain suitable employment outside Government service); and to secure them and those dependent on them from penurious want.

That no allusion was made to State Railway Engineers by Your Memorialist, who distinctly referred to "all other non-pensionable public officers employed on State Railways." That there would appear to be no reason why a body of highly specialized officers should be obliged to labour under less favourable conditions than non-pensionable public officers of State Railways.

5. That prayer (6) has received no reply whatever, that being combined with prayers (1) and (3), it has escaped consideration. That Temporary Engineers on all open lines of Railways are admitted to special provident rules, along with all other non-pensionable establishment. And Your Memorialist fails to understand why a Department which yields considerably better results than State Railways should be unable to treat the very employees, who contribute so largely to such results, with equal liberality as the Railway Department.

6. That judging, by His Honour's reply to prayer (2), the purport of Your Memorialist's prayer would seem to have been entirely misunderstood.

That Your Memorialist did not intend to ask for the *frequency* of selection to the permanent establishment to be regulated; but that such transfers might be more frequent than at present, and that *selection* be governed by some recognised principle. *That the Temporary Engineers as a body, in view of their wide experience and services, be constituted one of the sources, if not the main source, of recruitment to the Irrigation Branch of the Public Works Department after a period of approved service.*

7. That His Honour's reply to prayer (4) is the first intimation of any order of the Government of India limiting Your Memorialist's increments to Rs. 50 every second year, and that the omission to inform Your Memorialist of an order, fraught with so much importance to Your Memorialist, is a typical instance of the scant consideration meted out to a body of men, deserving well of the Government. That such an order is exceedingly disheartening to Your Memorialist, who has been led to believe that good work would always be suitably rewarded. That the order is all the more depressing from a consideration of the fact that Permanent Engineers get annual increments of Rs. 35 and 50, respectively, after 8 years' service.

That Your Memorialist begs to submit that Temporary Engineers performing the *same duties*, under far less favourable conditions, with no guarantee of continuous employment, or of provision in the future, in the shape of either pension or adequate provident provision, are entitled to at least an equal, if not better, rate of increment than their permanent confrères.

8. That Your Memorialist has waited patiently for five years since hearing of the improvement in the prospects of the permanent establishment, for some amelioration of the conditions of Your Memorialist's service before appealing to Your Excellency; and humbly submits that this should be accounted unto Your Memorialist for righteousness.

9. That Your Memorialist accordingly humbly and respectfully prays that Your Excellency will be pleased to take this and the earlier Memorial into your favourable consideration and grant the following reliefs, namely:—

(1) That Temporary Engineers of over four years' standing be made permanent, non-pensionable, and be borne on the same cadre as the Permanent Engineers, who are pensionable and promoted side by side with them in due and ordinary course.

(2) That the selection of Temporary Engineers for appointment to the pensionable list may be regulated in such manner as may be just and suitable, and that

such selections may be more frequently made than at present, and on some recognised basis.

(3) That Temporary Engineers be treated in all respects in the same manner as all other non-pensionable public officers employed on the State Railways in India.

(4) That their increments may be made annual and on a more liberal scale than at present, and that such increments may be regulated by fixed rules as in the case of the pensionable staff of Engineers.

(5) That they may be granted the language rewards and allowances granted to their confrères on the pensionable list.

(6) That their Provident Fund be placed on the same basis as those of State Railways; and

(7) That the leave rules applicable to all other Indian services be extended to them.

(8) That Your Memorialist's request for permanency be specially considered.

Or such other or further relief as to Your Excellency may seem just and proper in the circumstances.

And Your Memorialist will ever pray, &c.,

ENCLOSURES IN ABOVE.

(A.) To His Honour
The Honourable Sir LOUIS WILLIAM DANE,
G.C.I.E., C.S.I., I.C.S.,
Lieutenant-Governor of the Punjab.

The humble Memorial of
Temporary Engineer, Irrigation Branch, Public Works Department, Punjab.

Dated the 18th November 1912.

Sheweth—

That your Memorialist is employed as a Temporary Engineer in the Irrigation Branch of the Public Works Department in the Punjab.

That he has served the Government faithfully and to the best of his ability since he was appointed.

2. That, while the rules applicable to temporary Engineers debar them from many rights, advantages and privileges which are allowed to the permanent service, whether Imperial or Provincial, your Memorialist believes that it will be generally admitted that they form a useful body of public servants and have, for many years, as a body, rendered valuable services to the State. That, in this view, your Memorialist ventures to approach Your Honour in the hope of obtaining the redress of some of what he humbly ventures to regard as his grievances and, generally, an improvement in his position and prospects.

3. That, in order to make his case clear, your Memorialist begs to explain that Temporary Engineers were first employed, in the Punjab, in 1891, for work on the Lower Chenab Canal and the Sirsa Branch of the Western Jumna Canal: That this became necessary because of the reduction of the staff of Engineers in the Public Works Department, brought about by facilitating retirements in order to relieve a block in the service, with the result that the numbers soon became too low to meet the requirements of the works to be executed: That, in the course of the years 1891-98, a considerable number of Temporary Engineers were engaged and an effort was at first made by the Government to obtain the services of purely Temporary Engineers on a higher rate of salaries than that prevailing in the lower grades of the regular service. That this effort having failed, attention was turned to recruiting Temporary Engineers from amongst young, newly-qualified persons, with the intention of training and specialising them and employing them continuously without involving liabilities in respect of pensions. That officers thus specialising as Canal Engineers can only look to the Government, which has had them trained, for future employment and, if their services are dispensed with, find it impossible to obtain suitable employment elsewhere.

4. That there are now fifty-six Temporary Engineers in the Irrigation Branch of the Public Works Department of the Punjab, of whom—

22 have five years' service or less;
21 have more than five and less than ten years' service;
8 have more than ten and less than fifteen years' service, and
4 have more than fifteen years' service;
1 has more than twenty-one years' service.

—
56

That these officers, some of whom have served for many years, are allowed no rank or grade promotion even when they hold Divisional charges.

That the above Temporary Engineers are, in addition to three covenanted Engineers, employed in the Amritsar Workshops and six Temporary Engineers employed in the Roads and Buildings Branch.

That there are employed in the Irrigation Branch of the Public Works Department of the Punjab, 42 Assistant Engineers on the Imperial List and 14 Assistant Engineers on the Provincial List, so that the body of Temporary Engineers, who are all substantively Assistant Engineers, is more than four times the number of Assistants in the Provincial List, 26 per cent. more than the number of Imperial Assistants, and more than 50 per cent. of all the Assistant Engineers employed in the whole of the Irrigation Branch of the Province. That these facts make it clear that this large body now consists of Engineers practically in permanent employ, but placed on a separate list from the permanent Engineers, the chief distinction between the two lists being that the so-called Temporary Engineers are not entitled to pension.

5. That it is humbly urged that these figures show that the Government policy has long since changed from that which originally led to a few Engineers being temporarily engaged from time to time to meet emergencies and for special works and that the so-called Temporary Engineers now really form a large and integral part of the permanent staff, though engaged on altogether different terms, and are employed regularly on every class of work: That the Engineers so employed now constitute a regular service of Engineers, who, though still called "Temporary Engineers," are engaged on less favourable terms, in almost every respect, than those accorded to the permanent service. That Temporary Engineers discharge precisely the same duties as the latter, and many are compelled to submit to the humiliation of serving under their juniors in age, experience or length of service. That the engagement of Temporary Engineers is renewed annually and they are liable to dismissal after one month's notice, however long they may have served.

6. That it is humbly urged that the list of the so-called Temporary Engineers contains men who are in no way inferior in educational and professional qualifications to the men on the permanent list: That most officers recruited as Temporary Engineers hoped and believed that, if they gave satisfaction, they would, after some period of probation, be placed on the list of the permanent service. That this hope has been encouraged by appointments actually made from time to time to the permanent list:

That the following Temporary Engineers have been so advanced:—

Date of appointment to Permanent Service.	Name.	Present Rank.	Date at first appointment as Temporary Engineer.
1905	C. J. Floyd ..	Officiating Superintending Engineer.	May, 1891.
1898	C. B. Williams	" "	June, 1891.
"	F. T. Bates...	" "	September, 1892.
"	J. N. Taylor	Executive Engineer	May, 1891.
1905	E. H. Purves	" "	January, 1893.
1898	E. R. Foy ...	" "	December, 1894.
1905	C. B. Mellor	" "	May, 1892.
"	A. E. Jeffries	" "	February, 1891.
"	W. C. W. Muller.	" "	May, 1894.
"	R. C. R. Wilson.	" "	September, 1898.
"	C. H. A. Muller.	" "	May, 1895.

That in 1898 there were 32 Temporary Engineers and only 5 were made permanent, and in 1905 there were 50 such Engineers of whom only 7 were made permanent.

That fourteen Engineers were engaged, for fixed terms, in Europe, under covenants. That, of these eight men were, on the expiry of their respective terms, transferred to the Permanent List, while two others remained on the Temporary List. That the others retired at the end of their terms. *That the transfer of these eight Temporary Engineers to the Permanent List over the heads of the Temporary Engineers engaged in India, who were senior to them, was regarded as a grievous hardship.* That there were, on the Temporary List at least thirteen officers of longer service than these eight officers.

7. That the policy of the Government appears to have been to use Temporary Engineers for the purpose of graduating or regulating the flow of promotion in the permanent service, and that their services and interests, and the hardships thus imposed upon them, have been entirely overlooked. That, as a body of useful and hardworking public servants, discharging the same duties as their brethren on the Permanent List, and, in fact, themselves continuously employed, they feel this treatment very acutely indeed.

8. That by retaining so-called Temporary Engineers continuously in the service for many years, and gradually increasing their numbers, until they now form a very important proportion of the entire Engineering Establishment, it is humbly submitted that the Government have broken away from the original principle of engaging such Engineers for purely temporary service, and your Memorialists humbly contends that hopes have thus been raised which ought, in justice, to be fulfilled and urges that the Government should meet the just expectations of the present body of Temporary Engineers, who have done good work for so many years that their prospects are bound up in the Government service. That the discontent which has arisen amongst this useful body of public servants, cannot, it is submitted, be deemed unnatural when the disadvantages under which they (as practically forming a permanent service) labour as compared with their brethren on the Permanent List.

9. That the permanent services of the Public Works Department have recently been re-organized and the position and prospects of the members of those services have been greatly improved, while nothing has been done to mitigate the hardships of the class of Temporary Engineers. That your Memorialists, therefore, humbly and respectfully solicits that the hardships under which his service suffers and the grievances under which he himself labours may be mitigated and relieved.

10. That, in the matter of appointment to the permanent staff, two sets of selections have hitherto been made. That in the first case selecion was made only from those Temporary Engineers who were at the time employed on a single canal: That this told hardly on the general body of Temporary Engineers: That such promotion should, in justice, have been made by seniority tempered by selection from amongst the whole body of such Engineers. That the second set of selections was made from different canals, it is true, but seniority was more or less ignored, even in the case of seniors holding professional and service qualifications equal, if not superior, to some of the juniors who were selected: That, moreover, not a single Indian was selected for appointment to the permanent service although several were senior and equally qualified: That the list given in paragraph six, will make this clear. That it is humbly submitted that the selections have been few in number and have not been made on any recognized and sound principle: That five officers of over fifteen years' service, of acknowledged ability and good conduct, have been left out. That, out of the Temporary Engineers, of between five and ten years' service, there are several who would undoubtedly receive promotion in any other department of the service of Government. That it is impossible to expect officers of unquestioned character and ability, having several years of approved service and a good record behind them, to be contented under the conditions at present applicable to the Temporary Engineers in the Punjab. That it is respectfully urged that it is to the interests of the Government to ameliorate their condition and to render them contented and, therefore, more useful public servants.

11. That it cannot be advantageous to the Government to constitute a class of public servants which is looked upon by the members of another class of such servants, as being of inferior status, and the members of which are treated as having no right to consideration in matters of rank, promotion and the like. That many high officers of the Department have expressed the opinion that the present state of things, under which the same work is done by officers recruited on two different sets of conditions, those recruited on one set being placed on a lower status as regards permanency of employment, promotion and other privileges, and being regarded with supercilious contempt by their confrères who were recruited on another set of conditions giving them a more assured and favourable position, is not satisfactory. That, whatever else may be said, Temporary Engineers, as already shown, now form an integral part, and a large proportion of the Engineering Establishment of the Punjab.

12. That the chief grievances which your Memorialists desires to put forward may be briefly stated as follows:—

(*a*) Uncertainty of tenure of office and consequently mental anxiety.

(*b*) Insufficient prospects and uncertainty and inequality in increase of salary.

(*c*) Inability, with reference to (*a*) and (*b*), to make provision for the future.

(*d*) The withholding of jungle and other allowances.

(*e*) The absence of any definite leave rules.

(*f*) The insufficiency of the Provident provision in lieu of pension.

(*g*) The exclusion of Temporary Engineers from any right to hold Divisional charges and the absence of allowances to Temporary Engineers drawing Rs. 600 or over, when holding such charges.

That, while a large proportion of the officers employed on State Railways are non-pensionable, no such distinctions and disabilities apply to them as apply to the Temporary Engineers.

13. That a reference to the Civil List alone shows that Temporary Engineers are not treated with any consideration, and are herded together in a list appended to the list of the pensionable service without regard to grade, rank or service: That this may seem a small matter but for the fact that it is typical of the attitude taken up towards a large body of professional men.

14. That, as regards insecurity of tenure of appointment, your Memorialist ventures to think that the word "temporary" can no longer be aptly applied to men who, if found to be efficient, are retained in the service as continuously as any other class of public servants, some of whom are also (as in the Railways) non-pensionable: That, at the same time, the retention of this denomination leads to the treatment of Temporary Engineers with less consideration on the supposition that they can be more easily got rid of than any other class of public servants. That every Temporary Engineer is continually made to feel the insecurity of his position, and this, in the course of time, preys upon his mind and affects his nerves and renders him less confident and useful as a public servant, besides embittering his life. That, so long as the door of appointment to the Permanent List is open to Temporary Engineers and they are appointed to it within four or five years of their first appointment, the early period of the service being regarded as probational, no evil effects follow; but, when that door is closed for ten, fifteen, twenty or more years, the effect is highly injurious to the public service. That the Civil Service Regulations themselves show that the principle of assuring a permanent tenure of office, during good behaviour and efficient service, is generally admitted, and is, indeed, regarded as of supreme importance, and this principle is, in fact, applied to all services, superior and inferior alike, except in the case of Temporary Engineers.

15. That at present the fact that a Temporary Engineer *can* be dismissed with a month's notice, without any cause being assigned, is often used as a means of depriving him of the right allowed to all other Government servants of being permitted to reply to any charges of incompetence or misconduct which may

be made against him. That the exclusion of Temporary Engineers from these rights and privileges is not based on any condition of their employment, and is a right possessed by every public servant, whether permanent or temporary. That your Memorialist believes that it has never been the intention of Government to deny this privilege to Temporary Engineers, who belong to a professional class and are discharging the duties of, and are themselves, Gazetted Officers.

16. That your Memorialist ventures to urge that Temporary Engineers, although non-pensionable, are entitled to be placed on the regular cadre, and that this should be recognised and their status re-organised accordingly: That your Memorialist accordingly solicits that after four, or, at most, five years' approved service, a non-pensionable Engineer should be placed on the same cadre as the pensionable staff and be promoted side by side with that staff to Divisional charges, and that all disqualifications, except that of pension, be eliminated: That your Memorialist further solicits that the door of the pensionable service should be more widely opened to deserving members of the temporary establishment according to some recognised and definite rule.

17. That the Temporary Engineers are employed from year to year, subject to one month's notice of dismissal. That notice of their retention is annually served on them and has become almost a mere matter of form, but the existence of the rule and of this annual reminder thereof is extremely disheartening, not to say demoralising, as warning the recipient that his tenure of office is exceedingly insecure, and that, at any moment, he may, with those depending on him, be cast adrift, whatever may be the length of his service. That no employer imposes such a condition on his superior servants as that imposed upon Temporary Engineers, namely, that their services may be dispensed with one month's notice. That persons employed from year to year in the United Kingdom are in all cases entitled to a quarter's or longer notice: That private employers in India usually allow from three to six months' notice to superior employees. That what has been stated above shows the very great insecurity of the position of Temporary Engineers, and the state of mind engendered thereby is more easily imagined than described.

18. That the State Railways freely use the system of employing officers on the principle that the men employed shall not be entitled to pension: That, on Railways, those employed subject to this condition, are all treated as members of the permanent establishment and are graded, promoted and treated in all other respects in exactly the same manner as pensionable officers: That liberal provident provision, specially designed to meet the deprivation of pension, is established throughout every Railway service: That your Memorialist humbly solicits that precisely the same conditions should be applied to the body of Temporary Engineers: That the provision referred to is that the employer contributes to the provident fund, monthly, a sum practically equal to the contribution made by the servant, thus doubling the provision made.

19. That your Memorialist humbly urges that the body of Temporary Engineers suffers severely from the absence of any settled principle or rule regulating the increase of pay by annual increments. That, in this respect, the Temporary Engineer having no chance, as such, of rising to the position of Superintending or Chief Engineer, should be given increments on a somewhat higher scale than that applicable to the permanent Provincial List of Engineers: That, it is humbly urged that for a certain number of years the annual increments might be fixed at Rs. 40 and thereafter at Rs. 50 per mensen, and that salaries might be allowed to rise to a maximum of Rs. 1,050.

20. That there would, it is respectfully urged, seem to be no good reason for depriving Temporary Engineers of the Jungle allowances made to the permanent services, or of Language rewards, and the grant of these is humbly solicited: That the Jungle allowance is presumably made as compensation for long residence in solitary and inhospitable parts of the country, where the expense and hardship of living are accentuated: That Temporary Engineers are necessarily employed for long periods in such out of the way places, because they spend their service as Sub-Divisional Officers.

21. That your Memorialist humbly submits that there seems to be no good reason why the leave rules applicable to the Indian services generally should be denied to Temporary Engineers, and solicits the extension of these rules to them, in their entirety, inasmuch as they undergo the same strain and discharge the same duties as their confrères of the permanent service: That, at present, Temporary Engineers come under the temporary service rules which are intended for persons employed for short periods only. That such rules are hardly adapted to persons continuously employed for long periods: That, as regards privilege leave, the Temporary Engineer may have to pay the charge allowance given to his *locum tenens*, if a subordinate. That, as regards furlough, a Temporary Engineer has no recognised rights, and it has lately been decided by the Government of India that he may not get more than one year's furlough at a time, whatever his service. That, having regard to the present state of the body of Temporary Engineers, these inadequate provisions as to leave demand consideration.

22. That now that the list of Temporary Engineers has become both large and permanent, and contains the names of several men of over ten years' service, your Memorialist respectfully ventures to urge that such Engineers should be given Divisional Charges according to their seniority with reference to the whole body of Engineers both pensionable and temporary: That this boon would not only put new heart into this branch of the service, but would also be advantageous to the public interests, inasmuch as men of long service are more suited to Executive than Sub-divisional work, while their experience would render them an acquisition to this grade.

23. That your Memorialist accordingly humbly and respectfully prays that Your Honour will be pleased to take this Memorial into your favourable consideration, and to recommend to competent authority in the sense desired, the grant of the following reliefs, namely:—

(1) That Temporary Engineers of over four years' standing, be made permanent, though non-pensionable, and be borne on the same cadre as the permanent service Engineers, who are pensionable, and promoted side by side with them in due and ordinary course;

(2) That the selection of Temporary Engineers for appointment to the permanent, pensionable list may be regulated in such manner as may be just and suitable, and that such selections may be more frequently made than at present, and on some recognised basis;

(3) That Temporary Engineers be treated in all respects in the same manner as all other non-pensionable public officers employed on the State Railways in India;

(4) That their increments may be made annual and on a more liberal scale than at present, and that such increments may be regulated by fixed rules, as in the case of the pensionable staff of Engineers;

(5) That they may be granted the Jungle and Language allowances granted to their confrères on the pensionable list;

(6) That their Provident Fund may be placed on the same basis as those of State Railways;

(7) That the leave rules applicable to all other Indian services be extended to them; and

or such other or further relief as to Your Honour may seem just and proper in the circumstances.

And your Memorialist will ever pray, &c.

(*B.*) REPLY TO ABOVE.

Copy of a letter from F. E. Gwyther, Esquire, Secretary to Government, Punjab, Public Works Department, Irrigation Branch.

I am directed to acknowledge the receipt of correspondence ending with your letter No. 7493, dated

27th November 1912, submitting memorials from Temporary Engineers praying:—

(1) That Temporary Engineers of over four years' standing be made permanent non-pensionable, and be borne on the same cadre as the permanent service Engineers, who are pensionable and promoted side by side with them in due and ordinary course.

(2) That the selection of temporary Engineers for appointment to the permanent pensionable list may be regulated in such manner as may be just and suitable, and that such selection may be more frequently made than at present and on some recognised basis.

(3) That temporary Engineers be treated in all respects in the same manner as all other non-pensionable public officers employed on State Railways in India.

(4) That their increments may be made annual and on a more liberal scale than at present, and that such increments may be regulated by fixed rules as in the case of the pensionable staff of Engineers.

(5) That they may be granted the Jungle and Language allowances granted to their confrères on the pensionable list.

(6) That their Provident Fund may be placed on the same basis as those of the State Railways; and

(7) That the leave rules applicable to all other Indian Services may be extended to them.

2. In reply, I am to state that the memorials have been laid before His Honour the Lieutenant-Governor, and to request that the memorialists may be informed as follows:—

Prayers (1), (3), and (6).—As temporary Engineers are engaged to supplement the permanent establishment in order to meet the demand for extra supervision which may arise from time to time, as well as to insure that the Public Works Establishment be capable of contraction as well as of expansion as the expenditure on works diminishes or increases, His Honour is unable to make any recommendations to the Government of India for the appointment of temporary Engineers to the *cadre* posts as permanent non-pensionable.

It may be pointed out to the memorialists that in the Engineer establishment of State Railways there are but three officers on the permanent non-pensionable establishment.

Prayer (2).—As the selection of temporary Engineers for permanent appointment depends on vacancies caused by the authorized sources of recruitment being unable to supply the demands, the frequency of such selections cannot be regulated.

Prayer (4).—The Government of India have intimated that, unless very special reasons can be advanced, no increment should exceed Rs. 50, and that no increment should be granted except after two years' approved service, and in this His Honour agrees with the Government of India.

Prayer (5).—Language allowances are admissible for Baluchi and Pashtu only, and temporary Engineers are not debarred from drawing these allowances when they fulfil the conditions of the grant.

As regards jungle allowances, the Government of India have been pleased to rule in their Public Works Department letter No. 1436-1449 E., dated the 5th December 1912, that in future local allowances, which are ordinarily admissible to members of the permanent establishment, may be granted, either in whole or in part, to temporary employés under sanction of proper authority and subject to any restrictions which the sanctioning authorities may decide to impose.

Prayer (7).—As temporary Engineers can, with the sanction of the Government of India, be granted leave otherwise than that what is admissible under the Regulations, His Honour is of opinion that no change in the Rules is necessary.

III. CONNECTED CORRESPONDENCE.

(i) *Copy of para 2 of a letter No. 1700 E., dated the 30th September 1911, from Mr. G. H. C. Maistre, Deputy Secretary to the Government of India Public Works Department, to the Secretary to the Government, Punjab, Public Works Department, Irrigation Branch.*

2. In regard to the officers for whom increases of pay are recommended, I am to say that the Government of India are, as a rule, averse to granting an increase of more than Rs. 30, and that only after two years' approved service. It is observed that in some cases increases ranging from Rs. 25 to 50 are proposed after a year's service only and in one case Rs. 100 after two years' service. The Government of India are of opinion that these Temporary Engineers should not, save in very exceptional cases, be given a higher rate of pay than Rs. 700 a month, and that, therefore, it is undesirable to increase their salaries too rapidly. They further consider that unless very special reasons can be advanced no increment should exceed Rs. 50 and that no increment should be granted except after two years' approved service.

This has been superseded by B. (Government of Punjab letter No. 02488 E.I., dated 14th October 1913).

(ii) *Copy of a letter No. 02488 E.I., dated 14th October 1913, from the Secretary to the Government, Punjab, Public Works Department, Irrigation Branch, to the Superintending Engineer, Derajat Circle.*

With reference to correspondence ending with your letter No. 5439, dated 22nd September 1913, submitting certain Memorials addressed to His Honour the Lieutenant-Governor, by Temporary Engineers, praying that a recommendation may be made to the Government of India for the withdrawal of the order fixing the maximum salary of Temporary Engineers at Rs. 700 per mensem and increments Rs. 50 every second year, and that they may remain eligible for such increases of salary as they from time to time be recommended for, and this on some recognised basis, I am directed to request that the Memorialists may be informed that in future the remuneration to be given to Temporary Engineers will be considered on the merits of each case with reference to the financial powers conferred on Local Government by the Government of India Finance Department Resolution No. 249 E.A., dated 15th July 1912, under which Provincial Governments can sanction temporary appointments, the cost of which is wholly or partly provincial, for any specified period if the remuneration exceeds Rs. 800 a month, but does not exceed Rs. 2,500 a month. Temporary appointments, the cost of which is wholly Imperial, may be sanctioned by Provincial Governments for any period if the remuneration does not exceed Rs. 250 a month.

This has been superseded by C. (Government of India letter No. 2208-2, dated Simla, the 24th October 1913).

(iii) *Copy of a letter No. 2208-2, dated Simla, the 24th October 1913, from the Assistant Secretary to the Government of India, Public Works Department, to the Secretary to the Government of Punjab, Public Works Department, Irrigation Branch.*

I am directed to acknowledge the receipt of your letter No. 02378 E.I., dated the 10th October 1913, forwarding Memorials submitted by certain Temporary Engineers employed in the Punjab in which they pray for an improvement in the conditions of their employment and for the grant of certain other concessions in the matter of pay allowances, Provident Fund and Leave.

2. In reply, I am to say that, as the Temporary Engineers will have an opportunity of representing their case to the Royal Commission on Public Services, the Government of India do not propose to consider the Memorials forwarded with your letter till they have received any recommendations which the Commission may have to make on behalf of the general body of such Engineers. I am to request that the Memorialists may be informed accordingly.

APPENDIX V.

APPENDIX V.

Letter from the Chief Secretary to the Government of the Punjab and its Dependencies, No. 1617 (Home—General), dated Lahore, 7th October, 1913.

With reference to your letter dated the 1st of August 1913, I am directed to forward 20 copies of letter No. 567 E. S., dated the 23rd of September 1913, from the Chief Engineer, Public Works Department, Buildings and Roads Branch, and of its enclosure, giving the information required by the Royal Commission in respect of the Buildings and Roads and Irrigation Branches of the Public Works Department, Punjab.

Enclosure in covering letter from Colonel R. S. Maylagan, C.B., C.S.I., Chief Engineer, Punjab, Public Works Department, Buildings and Roads Branch, No. 567 E. S., dated Simla, 23rd September 1913.

PUBLIC WORKS DEPARTMENT, PUNJAB, BUILDINGS AND ROADS AND IRRIGATION BRANCHES.

Statement showing information required by the Royal Commission on the Public Services in India in their Joint Secretary's letter dated the 1st August 1913, to the address of the Chief Secretary to Government, Punjab.

(i) *Present regulations as to recruitment, training and probation, and whether these regulations are satisfactory.*—The regulations applicable to India as a whole are applicable to the Engineer Services (Imperial and Provincial) in the Punjab as well, as laid down in Public Works Department Code, Volume I, Chapter II, paragraphs 141 to 160. No supplementary or subsidiary regulations have been framed for this Province. Covenanted temporary Engineers, and temporary Engineers appointed in this country, have been, however, occasionally appointed to the permanent Engineer services by the Secretary of State or the Government of India. This, however, has only happened when the demand for Engineers has been such as could not be readily met by the ordinary methods of recruitment laid down in the Public Works Department Code.

With regard to these regulations being satisfactory or otherwise, reference is invited to Chief Engineers' opinions* forwarded under letter No. 1851 E. I., dated the 21st April 1903, to the Chief Secretary to Government, Punjab.

(ii) *Rates of pay and allowances in force in 1890 and 1900 and at the present time, and whether the present rates of pay and allowances are satisfactory.*—The rates of pay compare as follows:—

Departmental rank.	1890.	1900.		1913.	
		Imperial.	Provincial.	Imperial.	Provincial.
	Rs.	Rs.	Rs.	Rs.	Rs.
Chief Engineer ... 1st Class ...	2,500	2,500	2,500	2,750	2,750
Chief Engineer ... 2nd „ ...	2,000	2,000	2,000	2,500	2,500
Chief Engineer ... 3rd „ ...	1,800	1,800	1,800	—	—
Superintending Engineer. 1st Class ...	1,600	1,600	1,050	2,000	1,600
Superintending Engineer. 2nd „ ...	1,350	1,350	900	1,750	1,400
Superintending Engineer. 3rd „ ...	1,100	1,100	750	1,500	1,200
Executive Engineer 1st Grade ...	950	1,000	650	Rs. 700 rising by Rs. 50 annual increments on time scale to Rs. 1,250 per mensem.	Rs. 450 rising by Rs. 35 annual increments on time scale to Rs. 850 per mensem.
Executive Engineer 2nd „ ...	800	850	550		
Executive Engineer 3rd „ ...	700	700	475		
Executive Engineer 4th „ ...	600	—	—		
Assistant Engineer 1st Grade ...	500	550	400	Rs. 380 rising by annual increments of Rs. 40, on time scale to Rs. 660 per mensem.	Rs. 250 rising by annual increments of Rs. 25 on time scale to Rs. 425 per mensem.
Assistant Engineer 2nd Grade after three years.	400	—	—		
Assistant Engineer 2nd Grade ...	350	450	350		
Assistant Engineer 3rd „ ...	250	350	250		

Allowances.—(1) *Exchange compensation allowance* was generally admissible to Imperial Engineers in 1900; admissible in 1913 to those Imperial Engineers who rise to the ranks of Superintending Engineer and Chief Engineer, provided they were Executive Engineers, 1st grade, or higher rank on the 8th March 1908.

NOTE.—This allowance has practically been abolished for the executive ranks by the introduction of the time-scale in 1908.

(2) *Local allowance commonly known as jungle allowance.*—This allowance is admissible only to Divisional and Sub-Divisional Officers of the Irrigation Branch under the conditions and at the rates specified in Part III of appendix 19 of Public Works Department Code, Volume III. The allowance was not in existence in 1890. It was admissible in 1900 and is still admissible in 1913.

(3) *Local allowance.*—Chief Engineers who are also Secretaries to Government receive an allowance of Rs. 250. This allowance was not in force in 1890 or 1900, but is in force in 1913. Under-Secretaries to Government also receive as such a local allowance of Rs. 100 per mensem. This allowance was in force in 1890-1900 and is still in force in 1913. This allowance is now also granted to the Personal Assistant to the Chief Engineer, Irrigation Branch, but was not granted to that officer in 1890 and 1900.

Leave and Pension allowances. These are laid down in the Civil Service Regulations, Chapter XXX.

With regard to whether the rates of pay and allowances are satisfactory, reference is invited to Chief Engineers' opinions*, forwarded with letter No. 1851 E. I., dated the 21st April 1903, to the Chief Secretary to Government, Punjab.

(iii) *Number of posts in each grade, and the provision, if any, made in the cadre for leave and training.*—The sanctioned Engineer cadre for the Irrigation Branch is for 122 officers including a provision of 20 for leave but none for training. This number is made up as below:—

	Appointments.
Chief Engineer class	2
Superintending Engineer classes ...	10
Executive and Assistant Engineer classes	110
Total ...	122

Executive and Assistant Engineers are on a time scale of pay. Assistant Engineers ordinarily pass into the Executive class in the 9th year of service, provided they are fully qualified for the charge of a Division, but no officer can draw more than Rs. 800 per mensem in the case of Imperial Service or more than Rs. 535 per mensem in the case of the Provincial Service unless he holds a Divisional charge or a charge of equal importance.

In the Buildings and Roads Branch the cadre is as follows:—

Chief Engineer	1
Superintending Engineers including Sanitary Engineer	4
Executive Engineers	18
Assistant Engineers	18
Total ...	41

The sanctioned number for absentees is 6. No provision is made for officers under training.

* *Vide* paragraphs 71,506–509.

* *Vide* paragraphs 71,506–509.

(iv) *What appointments outside the authorised cadre are held temporarily, or otherwise, by officers of the various services.*—There are no appointments in the Irrigation Branch outside the cadre that are held by Imperial or Provincial Service Engineers. There are, however, three posts in the Department in connection with the Central Workshops of the Department at Amritsar, which are held by officers covenanted out from Home and known as Covenanted Temporary Engineers, viz., (1) Superintendent and (2) two Assistant Superintendents. There are at present 54 temporary Engineers in the Irrigation Branch to supplement the strength of the Engineer establishment. These officers are on salaries varying from Rs. 750 to Rs. 200 per mensem, and their services are terminable at a month's notice. Their numbers fluctuate according as the work of the Department expands or contracts. Eleven permanent Engineers of the Irrigation Branch, Punjab, are on deputation,—3 to Siam, 4 to Delhi Province, one each to Baluchistan, Gwalior State, Central Provinces, and Buildings and Roads, Punjab. The posts vacated by the men on deputation have been filled by Temporary Engineers in a few cases, but chiefly by upper subordinates.

In the Buildings and Roads Branch there are 3 officers on deputation,—one to the Simla Municipality as Resident Engineer, and 2 to the Imperial Works at Delhi. One officer is also on deputation to this branch from the Military Works Services as a specialist to take charge of the Simla Hydro-Electric Works. The services of Mr. Gemmel lent by the Irrigation Department have been placed at the disposal of the Education Department as Principal of the Government Engineering College at Rasul.

Seven temporary Engineers are employed on salaries from Rs. 400 to Rs. 600 on same conditions as in the Irrigation Branch.

(v) *Whether any addition is required to the present cadre.*—The question of addition to the present cadre in the Irrigation Branch is under consideration, and the result will be reported to the Secretary to the Royal Commission later. The Irrigation Branch any cadre is known to be much below requirements.

In the Buildings and Roads Branch no addition is at present contemplated.

APPENDIX VI.

Letter from the Chief Secretary to the Government of the Punjab and its Dependencies, No. 1787 (*Home—General*), *dated Lahore, 5th November*, 1913.

In continuation of my letter No. 1617 (Home—General), dated 7th October 1913, I am directed to forward, herewith, 20 copies of a letter No. 3100 E. I., dated 1st November 1913, from the Chief Engineer, Irrigation Works, Punjab, and of its enclosures, completing the information called for by the Royal Commission in respect of the Buildings and Roads and Irrigation Branches of the Public Works Department, Punjab.

Enclosures in Covering Letter from F. E. Gwyther, Esq., Chief Engineer, Irrigation Works, Punjab, No.* 3100 *E. I., dated Lahore, 1st November* 1913.

I.—NOTE, DATED 4th SEPTEMBER, 1913, BY MR. F. E. GWYTHER, CHIEF ENGINEER, IRRIGATION WORKS, PUNJAB.

The subject of the present discussion on a reinforcement of the Sub-Divisional staff in the Punjab Irrigation Branch was only raised three years ago, and has for its avowed object the replacement of Temporary Engineers now employed in Revenue charges. I understand the Government of India would like to get rid, as soon as possible, of all temporary men, but Mr. Gordon's note of 5th September 1910 apparently contemplated their gradual extinction, for he retained 25 Sub-Divisions for them (*i.e.*, for about half the number of temporary men now in employ).

2. Before proceeding to note on the suggestions made for reinforcement, I would like to touch on this question of Temporary Engineers: apparently Mr. Gordon decided that it was " not considered desirable to place men of this class in permanent charge of Revenue Sub-Divisions," and the Government of India have accepted the principle.

3. If the alternative was the employment of permanent Imperial or Provincial men, I should have no hesitation in accepting it myself. But as a fact the only alternatives presented to us are—

(*a*) the larger employment of Upper Subordinates, or

(*b*) the creation of a new agency or link in the shape of Canal Revenue Assistants, or

(*c*) a reduction in the number of Sub-Divisional Officers by enlarging existing Sub-Divisions.

My own experience is that the bulk of our temporary staff is doing as good work as the Provincial men—better than the average Upper Subordinate. It contains men of talent, who have now considerable experience to back them (and for this reason they are of considerable use to the State) and are more looked up to than the Upper Subordinate class.

4. There are two difficulties in the way of any drastic treatment of our temporary officers on the lines suggested above, and they are:—

(i) The impossibility of chucking out men who have done good work—some with 20 years' continuous service—and who would find it difficult to secure employment elsewhere. In the case of men with approved service this would be a cruel decision to adopt.

(ii) It would also be unnecessary. The Department is an expanding one—it is constantly called on to depute men for special works (*e.g.*, to Native States, Central India, Delhi, Siam): † there is at present no sign in view of its having reached its utmost limit of expansion. On the contrary, the opening of the Beas Project will create a further enlargement of our staff—to mention only one work in view. To reduce our temporary staff now, create a new one in its place, and then re-entertain temporary men two years hence would in my opinion involve injustice and great hardship.

As it is, the Department is undermanned, we have to employ Upper Subordinates in Sub-Divisional charges who are too young, and are not fitted for them.

5. As regards the second alternative, I concur in the conclusion arrived at by the Government of India on the suggestion made to create a new class of Canal Revenue Assistants.

It is not clear why the term " Revenue " should be applied to them; I understand they will be selected men who will have to undergo a two years' Engineering course to fit them for technical work and Sub-Divisional Officer's responsibilities: but it is not explained how they will acquire Revenue experience—presumably while in charge of a Sub-Division. In that case they would in practice be equivalent to Provincial Engineers, with the added advantage of selection, and the immense disadvantage of forming a separate closed service without any prospects.

6. My reasons for objecting to this suggestion are the following:—

(*a*) It contemplates forming a new service to do work which is now being efficiently and ably done by trained Imperial and Provincial Engineers and by Upper Subordinates.

(*b*) If training of its selected officers on the Revenue side is contemplated, it would form something of a hybrid profession—neither Engineer nor Revenue.

* The covering letter states that the views expressed in the notes were the views of the Chief Engineers and not those of the Local Governments.

† The displacement of the trained temporary staff by new men of whatever designation would mean to the Department the distinct loss of the time and money that has gone in training the former.—R. EGERTON PURVES, 21st September, 1913.

APPENDIX VI—*continued.*

(*c*) It would imitate the present temporary staff, in that it would employ men who could secure no "plums" and would have no future prospects. In time it would be a discontented service—claiming as in the case of Provincial and temporary men that they do the same work as other (*e.g.*, Imperial) Sub-Divisional Officers and should be similarly treated. The plea would be difficult to resist and would lead to agitation.

(*d*) Such a staff would, if created now, lack weight and possess no experience—for the next 10 years it would not prove efficient.

(*e*) It provides for a staff which should ordinarily be catered for by Engineering Colleges. Sub-Divisional Officer's work is only partly Revenue, and it will be a bad day for the science of irrigation when the fact is lost sight of that it needs technical and an Engineer's training.

7. The third alternative, presented by the Government of India, involves a reduction of Sub-Divisional Officer's staff by enlarging Sub-Divisional charges—thereby reducing their number. This in my opinion would be a retrograde step, and involves a misconception of hard actual facts. We have for some time past felt that both Divisional and Sub-Divisional charges in the Punjab Irrigation Branch are far too large—it is recognised by all senior officers now that work has increased so greatly, the responsibilities and requirements exacted so large that Sub-Divisional Officers cannot efficiently run such charges: the result is that they are increasingly out of touch with the minutiæ of their work and with the cultivating classes.

8. I attach a statement which compares our Punjab charges with those of other Provinces in India as regards—

(*a*) the annual revenue collected,

(*b*) the annual expenditure incurred,

(*c*) area irrigated and cost of establishment,

in them on the average: it throws into prominence the fact that our charges are generally 2½ times larger and heavier than those found necessary in the United Provinces and Madras (the largest irrigating Provinces approximating to the Punjab).

The fact merely strengthens the general opinion of senior officers (including myself) that both Divisions and Sub-Divisions are as at present constituted in the Punjab much too big, and any enlargement of them would prove to be a serious mistake. It illustrates as well the present difficulty of employing men of the calibre of the average Upper Subordinate Class in such big charges.

9. My objections to the scheme outlined by Government of India may be summarised as follows:—

(i) The introduction of new and additional officials between the Sub-Divisional Officer and the cultivators is unsound in principle; the object we should aim at is rather the reverse of this—to remove such possible obstacles and to encourage by every means possible more intimate relations between the two. That would be in the interests of the State, as well as of the science of irrigation. I think the introduction of two professional and one revenue officials as assistants to the Sub-Divisional Officer would indubitably tend to add more links in the chain connecting the latter with his zamindars; and I am confident that is not a proposal which would find favour with the latter class.

(ii) The additional staff would to a certain extent constitute a fresh burden on the Sub-Divisional Officer; he would have three more men to correspond with, to teach and to supervise.

(iii) It would not in practice relieve him of his existing burdens; the Sub-Divisional Officer would still be the responsible officer whom modern requirements and an increasingly stringent application of rules does not permit of being relieved. Any out-of-doors relief he might secure through this agency would be distinctly undesirable, as tending to loss of touch with important details he should have at his fingers' ends and to the creation of a type of Under-Divisional Officer which we would view with disfavour.

(iv) It would tend to increase the subordinate and Indian staff in a Division, with resultant loss of efficiency.

(v) And it will involve considerable additional expenditure under establishment. The exact amount need not be worked out now, but it will probably amount to 2½ lakhs annually, say Rs. 400 per Division of two Sub-Divisions.

(vi) Additional expenditure will also be involved for touring accommodation—that at present available at rest-houses has been strictly limited to present staff and in some circles is admittedly insufficient even for that.

(vii) It is suggested that the Revenue Assistant would conveniently form a stepping-stone to the Deputy Collector grade; the want of such a link is not at all apparent, and its creation would deprive the existing Zilladar staff of direct promotion by selection from Zilladar, 1st grade, to Deputy Collector, 3rd grade. Even in our large charges no need has yet, I think, been expressed or felt as to the desirability of strengthening our Revenue staff.

(viii) As regards the two Upper Subordinates to be posted as Assistants to the Sub-Divisional Officer, the general feeling is that such work would not prove good training for them, nor tend to qualify such men for holding charge of a Sub-Division in their turn; they will lose the advantages of training in a section, and will tend to degenerate into roving agents in out-of-the-way places on odd jobs for the Sub-Divisional Officer.

(ix) Finally, when making proposals of this kind, we must not lose sight of the possibility of fixed canal assessments replacing our present system, thereby relieving us of some Revenue work and freeing the hands of the Sub-Divisional Officer for greater attention to other minutiæ.

10. That some relief to the present congestion is desirable is generally admitted, but I do not think it will be secured by getting rid of our Temporary Engineers, not because the bulk of them are admittedly inefficient, but merely because they are employed for temporary service. The fact that we have permitted them to gain considerable experience in that class of work (Revenue), without protest, for many years, cannot be ignored.

Nor do I consider the creation of a new special class of Sub-Divisional Officers (Canal Revenue Assistants) with limited prospects and forming a closed service, likely to help us out of our difficulty. Such a staff would be created at the expense of the Provincial Engineer Establishment and of the Upper Subordinates without the distinct advantages of either; there is little doubt in time it would claim those of the former, on the obvious grounds that it does the same work.

11. I do not think we should lose sight of the necessity for keeping up a limiting number of European Officers in the Department; it is now a very important Revenue earning department, and it is entirely to the interest of the State to employ officers who are respected and looked up to. In this respect we must not place the independent Punjabi on the same footing as the people of other Provinces. I mention this merely to indicate the need for caution in creating a new staff, and in employing too many Upper Subordinates as Sub-Divisional Officers (these have not come up to average expectations in Revenue Sub-Divisions and do not command the respect that is desirable).

12. My own proposals as alternatives to these two schemes are the following:—

(A) Increase the number of Divisions in the Irrigation Branch; this is a necessity that must be faced. It need not be done all at once.

(B) Decrease to some small extent the size of present Sub-Divisional charges by increasing their number (this refers to admittedly unwieldy charges).

(C) The extra Divisional Officers required under (A) would be automatically provided by our present cadre, in which in 1914 there will be more officers qualified to hold Divisions than there will be Divisional charges available.

(D) Provide for the additional staff that will be needed by—(*a*) additional recruitment in the Provincial Engineer Service and in the Imperial; (*b*) retaining the best of our temporary officers on a permanent non-pensionable footing; and (*c*) the recruitment of only selected candidates trained as Upper Subordinates at Rurki or Rasul.

APPENDIX VI—*continued*.

Comparative Statement showing average area of irrigation per Division and Sub-Division and Cost of Establishment on same basis for three years ending 1911–12.

Particulars.	United Provinces.			Punjab.		
	1909-10.	1910-11.	1911-12.	1909-10.	1910-11.	1911-12.

II.—*NOTE, DATED* 25TH *SEPTEMBER* 1913, *BY MR. R. EGERTON PURVES, CHIEF ENGINEER, IRRIGATION WORKS, PUNJAB.*

I agree with Mr. Gwyther in his note, dated 4th September 1913, in all but the remedy proposed for the present state of affairs, but before offering my own suggestions I should like to emphasise the fact that the work of the Department has been growing faster than the corresponding increase in the number of charges of each kind. For this purpose I have expanded the statement attached to Mr. Gwyther's note (see annexure), so as to include the Triple Project and the North-West Frontier Province (under construction in 1912), but not Baluchistan or the Amritsar Workshops Division. I have also included other items for comparison with the conditions prevailing in the adjacent United Provinces.

2. The resulting statement bears eloquent testimony, if that were wanted, to the far greater volume of work required of the Executive Officers in the Punjab. The figures, however, need some explanation before correct inferences can be drawn therefrom. I propose to deal with the following points:—

(*a*) Irrigated area.
(*b*) Intensity of irrigation.
(*c*) Length of channels to be maintained.
(*d*) Incidence of cost of establishment per acre irrigated.

3. *Irrigated area.*—In the United Provinces there are 24 Divisions and 62 Sub-Divisions for an irrigated area of something like 2½ million acres. In the

APPENDIX VI—*continued.*

Punjab, when fully going in about two years' time, there will be, on the *present basis* of provision, 41 Divisions and 125 Sub-Divisions for 9 millions irrigated. The number of charges based merely on the irrigated area should be more than three times those in the United Provinces. The volume of work is measurable mainly in two ways, *viz.*, (*a*) by the ground to be covered for field work and (*b*) by the number of cultivators who produce office work. The unit of area (the acre) being the same in both cases, the amount of field work to be got through would be practically equal per unit. On the other hand, the number of cultivators, or, in other words, the size of holdings, differ considerably in the two Provinces. In the United Provinces the size of holdings decreases from west to east and increases southward. In the Punjab the size of holdings increases from east to west. On both sides of the river Jamna the size of holdings may be said to be the same. If we allow (and the allowance seems reasonable when measured by the density of the rural population of the Agra Province, 367 per square mile as against 185 in the British territory of the Punjab figures of 1891) that the average volume of work arising from an acre in the United Provinces is *twice* that from an acre in the Punjab, the relative index figures for numbers of charges in the two Provinces would be—

United Provinces to Punjab for field work... 1:3
Ditto ditto for office work... 5:9

and it appears quite fair to estimate that, for the entire volume of work, the proportion is as 1:2.

4. *Intensity of irrigation.*—As this figure takes into account the gross commanded area, it is really a better measure of the volume of work than the irrigated area. We find (see attached statement) that in the United Provinces the intensity is 14 per cent., whereas in the Punjab it is now 40 per cent. and will become 42 per cent. during the next few years. Making the same allowance as before the relative index figures will become:—

United Provinces to Punjab for field work... 1:3
Ditto ditto for office work... 2:3
and the final result will be as 1:2.

5. *Lengths of channels to be maintained.*—In the United Provinces there are 1,812 miles of main canal and 9,379 miles of distributary channels to be maintained, and in the Punjab the same figures will, in the course of 3 or 4 years, be 4,644 and 13,356, respectively. Now the main canal and branches call for far more attention than the distributaries, in the length of ground to be covered. This is one of the reasons why complaint is sometimes heard against Sub-Divisional Officers that the distributaries have been neglected. In such cases, I think, the explanation will be found in the fact that relatively the officer has had too large a proportion of main canal to maintain. In order to arrive at a fair comparison of the relative volume of field work arising out of this item, it seems fair to count each canal mile as equal to 4 distribuary miles. Correcting the mileage figures by this multiplier, the relative figures of the two Provinces will become—

For each Division as 692:861
Ditto Sub-Division as 268:302

On this basis then the Punjab Divisions are larger by 26 per cent. and the Punjab sub-Divisions are larger by 13 per cent. The extra work entailed under this head is in addition to the volume of work arising out of the larger irrigated area. It would also appear that the Punjab Divisions must be reduced in size relatively more than the Sub-Divisions.

6. *Incidence of cost of establishment per acre.*—The figures under this head are not complete for the Punjab as a whole. At present a comparison can only be made between the United Provinces and the open canals in the Punjab. The relative figures are 0·76:0·53 per acre, which shows that the United Provinces work costs 43 per cent. more than the same work in the Punjab. The relative proportions in detail are:—

	United Provinces.		*Punjab.*
Intensity of irrigation (modified)	1	:	2·0
Whole cost	1	:	1·9
Revenue management only ...	1	:	2·0
Maintenance of works only ...	1	:	1·5

From above it will be seen that the cost of revenue management is about the same proportionately as the relative volume of work due to intensity of irrigation, as modified by me, *viz.*, as 1:2. But the cost of establishment employed on the maintenance of works is about 25 per cent. less. This may be compared with the figures of 26 per cent. arrived at differently in paragraph 5 when considering the lengths of channels to be maintained. The coincidence is quite accidental and has not been specially worked up to agree. We may take it then that our superior staff requires to be strengthened by 25 per cent. The cost of this item in the Punjab should be twice that of the United Provinces, and therefore instead of Rs. 8,00,350 it should be Rs. 10,44,200 or thereabouts. An increased expenditure of Rs. 2,40,000 is required to make the Punjab supervision as efficient at least as the United Provinces supervision.

7. I may now summarise the results of this enquiry. In considering the relative irrigated areas and intensity of irrigation, it has been found that the volume of work in the Punjab is twice that in the United Provinces per unit considered: also as regards lengths of channels to be maintained, the Punjab Divisions are 26 per cent. larger and the Sub-Divisions 13 per cent. larger than in the United Provinces: and that when we compare the cost of establishment on maintenance (superior staff), we find that the Punjab is undermanned by 25 per cent. as measured by the United Provinces standard. It is not contended that these deductions are quite accurate or free from objection. The main point, however, which is clear is that viewed in any manner the superior staff is insufficient in the Punjab, and we have gradually allowed ourselves to drift into a condition of overwork with consequent proportionate loss of efficiency. In my opinion we are in defect to 25 per cent. of our superior staff.

If we increase our superior staff by providing Rs. 2,40,000 more under cost of establishment on maintenance of works (see paragraph 6 above), the total cost of establishment would be increased from Rs. 34,93,000 to Rs. 37,33,000 and the incidence of cost per acre would be raised from 0·53 to 0·57, and this would still be less than 0·76 in the United Provinces. I have no doubt that in the course of time when the average of holdings in the Punjab becomes smaller and the volume of work increases, we shall be forced to make a corresponding increase in the staff. We are, however, concerned with the present condition of things. The increase suggested by my note is so modest that I believe no serious objection will be raised, and I also believe that the money so put out will be repaid fully in other ways to Government. It will give our Executive Officers much relief and will also give them the time to study and suggest improvements. We are now coming to a time when forward movements in all directions are desirable and necessary. We must consolidate and improve the immense property in our keeping.

8. I propose in the paragraphs following to consider the manner in which this increase of 25 per cent. of the Executive staff should be carried out to give the best results:—

We have at present—

Divisions	41
Sub-Divisions	125
Total	166

and when the canals now under construction are completed we shall have—

Divisions	37
Sub-Divisions	106
Total	143

based on the same standard which we have found to be insufficient when compared with the United Provinces. To improve this condition of things we ought to have 35 new appointments in the Executive and Assistant charges plus the usual additions for leave vacancies.

9. Our present proportion of Divisions to Sub-Divisions is (or will be in 2 or 3 years) as 37:106 or

as 1:2·89. Congestion in the lower ranks and loss of efficiency is sure to come in the near future, if we continue to maintain this ratio, and our qualified and senior Assistants will not get Divisions as soon as they ought to. Unless the ratio is changed, we shall revert to the congestion which occurred in 1888 to 1895, when men served in Sub-Divisions for periods varying up to 14 years' service. We have only been able to maintain a suitable flow of promotion in the permanent staff by the employment of a large and growing (permanently employed) staff of Temporary Engineers, who bulk almost wholly as Sub-Divisional Officers. It was foreseen almost from the first that the recruitment of the temporary service was a clumsy makeshift which transferred the onus of finding a true solution of the difficulty to posterity. The time has come when we may deal with the question correctly or devise some other makeshift to add to the difficulties of posterity of a later date. It has been accepted that the temporary service, with its difficulties for the employer and its hardships for the employed, must go, and the sooner we can do this with the least amount of hardships to individuals the earlier shall we be out of a difficult position. In order therefore not to cause congestion, it will be necessary to alter the ratio of Divisions to Sub-Divisions, while we are adding to the staff as a whole for other reasons. I make out that our ratio should be reduced from 1:2·89 to 1:2·4, in order to meet all the conditions of the Punjab. From the United Provinces figures (see statement attached) the ratio is 24:62 or as 1:2·5. This higher ratio is, I think, due to the fact that *relatively* more Upper Subordinates are employed habitually in Sub-Divisions. Of 86 appointments, the Upper Subordinates may number 22 or say 25 per cent. We shall need a superior staff of something like 250, and cannot at present find more than 40 suitable Upper Subordinates or only 16 per cent. It is, therefore, clear that as things are in the Punjab the proper ratio of Divisions to Sub-Divisions should not be greater than 1:2·4.

10. It is not only impossible but not desirable to make the Divisions all more or less uniform in extent. Not only does the intensity of work vary, but the necessities differ, and the ability of our officers, by reason of age and experience and other causes, varies. I would therefore propose to create a certain number (to be determined on recasting the charges) of light Executive charges to be placed in charge of the less able or younger Executives. The light Executive charges might, for the purpose of effecting some small savings, be termed independent Sub-Divisions, and they might ordinarily consist of one or two Sub-Divisions in charge of Assistants and a small headquarter section to be under the direct orders of the Executive Engineer. No young Executive Engineer or, for the matter of that, an older and less able officer need take exception to this arrangement. He would have in charge of the direct section a good Upper Subordinate in training for Sub-Divisional charge, and otherwise there would be less work than at present owing to the reduction in size of Divisions.

11. Under the redistribution of charges on the completion of the canals now in progress, the total number of charges is to be (37 + 106) = 143. I would increase these by 30 for the present. There ought to be 35 new appointments as noted at paragraph 8 above, but 30 will meet immediate requirements. We should have then (143 + 30) = 173 charges, which should be arranged in the following manner:—

Divisions	51
Sub-Divisions	122
Total	173

The ratio adopted is 1:2·4. These figures will supersede the total of 166 existing charges or 143, as they might have become, had we reduced the charges, as shown in the statement.

12. We can now estimate our full requirements making provision for leave vacancies:—

Chief and Superintending Engineers, as at present	12
Under-Secretaries and Personal Assistants to Chief Engineers, as at present	3
Executive Engineers of Divisions	51
Sub-Divisional Officers	122
Personal Assistant to Superintending Engineers	5
For surveys and new construction—Sutlej Valley Canal, &c.—including 2 Superintending Engineers for same	32
For Baluchistan	2
For Amritsar Workshops	3
Total	230
Allowance for permanent Engineer absentees (*i.e.*, 20 per cent. 165)	33
GRAND TOTAL	263

This looks a large figure, but it is not one bit too big for the magnificent property to be cared for.

13. I propose to provide for this staff in the following manner:—

Permanent Imperial and Provincial Engineers	198
Temporary Engineers, pure and simple ...	25
Upper Subordinates in *habitual* charge of Sub-Divisions	40
Total as above	263

or omitting Upper Subordinates, we should have 223 Engineer officers against which we have at present—

Permanent Imperial and Provincial Engineers, as per sanctioned cadre	122
Covenanted Engineers	3
Temporary Engineers	53
Total	178

We are therefore 45 men short, which should be made up in the next 3 or 4 years during which time the scheme, if agreed to, could be carried through. The changes could be carried over 3 or 4 years.

14. Now as to recruitment of the permanent staff—

We shall need a permanent staff of	198
Whereas we have at present only	122
We require	76

I would propose engaging at once from 25 to 30 of the very best of the Temporary Engineers, bringing them in on various positions on the list to prevent congestion among themselves and others. I believe we could find suitable men of experience in our temporary staff for recruitment immediately. The remainder of the staff I would recruit from present sources of supply spreading out the additions over four years. Later on in 3 or 4 years it might be possible to give a few of the best Temporary Engineers remaining with us permanent appointments before dispensing with the services of the last.

APPENDIX VI—*continued.*

Statement comparing the United Provinces with the Punjab.

Items of comparison.	United Provinces.	Punjab and North-West Frontier Provinces.							
		Open Canals.	Triple Project.		North-West Frontier Province.		Total.	
			At present	Required for revenue.	At present	Required for revenue.	At present.	Required for revenue.

APPENDIX VII.

Memorandum prepared by the Government of the United Provinces of Agra and Oudh relating to the Public Works Department.

I.—General.

Division of the Engineering Establishment into Imperial and Provincial.

1. Before any of the other questions which concern the Public Works department are considered, it is first of all necessary to examine the present constitution of the department with reference to its division into Imperial and Provincial Branches.

The constitution of the Provincial service was the outcome of the recommendations of the Public Service Commission of 1888.

The recommendations of this Commission were as follows:—

(1) "The Engineer establishment of the Public Works department should consist of an Imperial Branch and of Provincial branches."

(2) "The Imperial Branch should consist of such a number of Royal Engineers as may be required as a reserve for Military purposes, over and above the officers employed in the Military Works Branch and of Civil Engineers recruited in England."

(3) "The strength of the Imperial Branch should not be greater than is necessary for purposes of control and direction and for the execution and repair of works calling for high Engineering skill, and the recruitment from the Coopers Hill Engineering College which appears excessive should be regulated accordingly."

(4) "The conditions of service in the Imperial Branch should be fixed with a view to secure the necessary qualifications in England, and should, as far as possible, be uniform for all officers employed in it."

(5) "The Provincial Branches should be of a strength adequate for the construction and maintenance in the several provinces of works not ordinarily calling for high Engineering skill."

(6) "The recruitment for the Provincial Branches should be made by the direct appointment to the lowest grades of qualified Engineers from the Indian Engineering Colleges, and in exceptional cases by promotion from the Upper Subordinate grades."

(7) "There should be at least one College in India thoroughly well equipped for providing a high education for Engineers for the Provincial Branches, and such College should be open to all classes of His Majesty's subjects."

(8) "The conditions of service as to pay, furlough and pension should be fixed for the Provincial Branches without reference to those of the Imperial Branch."

(9) and (10) These proposals refer to the Accounts branch only.

The Commission held that the proposals embodied "principles on which the establishment of the Public Works department should be reorganised in the interests alike of economy and of efficiency and as furthering the larger admission of qualified Natives of India to employment in this important department of the Public Service."

2. The history of the reconstitution of the Public Works department Provincial service in accordance with those recommendations and the difficulties which have arisen therefrom are set forth in the appended article* on the Public Works department Provincial service which appeared in the *Pioneer* of August 14, 1912.

The article gives a clear *résumé* of how the service now appears to the ordinary man of business.

The Commission of 1888 recorded that "the distinctions inevitable in a department so constituted and

* Printed as annexure.

recruited give rise to friction and jealousies which must affect the efficiency of its officers. Royal Engineers, Coopers Hill Engineers, and Engineers educated in India all belong to the same service, but, as shown above, the conditions of service of each of these classes differ in regard to leave and pension; and the men appointed in India not unnaturally claim to be placed on an equal footing with their brother officers."

3. The object that the Commission had in view in making their recommendations regarding the formation of Imperial and Provincial services with distinct conditions of service was as follows:—

The Commission considered that "some of the operations of the Department require the highest Engineer skill and training obtainable in England, and for the control and direction of a great Department, the annual expenditure of which is reckoned by millions, qualifications are wanted which are not at present readily attainable in this country," whilst "on the other hand, much of the work which falls on to the Engineering establishment is such as may be and is performed efficiently by officers who have received their professional education in India." To cope with these two grades of work it was recommended that the service of engineers should be divided into two branches, Imperial and Provincial.

4. It has been found impracticable and undesirable to lay down definitely that certain divisional charges or even a fixed proportion of divisional charges should be reserved for Provincial Engineers.

The result is the present anomalous state of affairs in which we have two classes of men in a professional service, some of them educated approximately up to the same standard and performing the same duties, but at the same time under entirely different rules as regards pay, leave and pension. Thus, in spite of the changes made, the same anomalous state of affairs continues on which the Commission specially commented as giving rise to friction and jealousies which were bound to affect the efficiency of its officers. Such a state of affairs does not exist in any other service in India.

The Provincial Service Officers of Civil and Medical services, for instance, are undoubtedly inferior as regards education and training to the officers of the Imperial service, and, moreover, the duties they have to perform are of a lower standard.

The superior Accounts branch of the Public Works department with far less responsibility and need of character and initiative, less study to keep abreast of the times, less exposure and isolation and greater comforts and amenities, is maintained on an Imperial footing, and it is certainly an anomaly that some of the Engineers should be inferior in position to their Auditors.

II.—PROPOSED RECONSTITUTION OF THE DEPARTMENT.

1. The only solution of this difficult question which, in the opinion of the Local Government, is likely to bring contentment to the department and to promote efficiency, is the following:—

(*a*) The abolition of the Provincial service and the placing of all officers in the Imperial service under the same rules as regards pay, leave and pension.

(*b*) The constitution of an improved upper subordinate establishment. This establishment to consist of:—

(*a*) A Sub-Engineer class with pay from Rs. 200 to Rs. 600, and (*b*) an upper subordinate class with pay from Rs. 100 to Rs. 300.

The men for class (*a*) to be recruited from passed Engineer students from Indian Colleges and by promotion of deserving men from class (*b*). Only men in the Sub-Engineer class should, it is considered, be eligible for the charge of sub-divisions. Men of the Sub-Engineer class should not be promoted to the Imperial service, as, in the opinion of the Local Government, there should be a hard and fast line of distinction.

In order, however, to provide opportunities for advancement to specially meritorious Sub-Engineers, such officers, it is suggested, might be made eligible for three or four divisional charges on a special rate of pay, say Rs. 700 to Rs. 800 per mensem.

In the manner briefly indicated above, the Local Government is of opinion that a class of Sub-Engineers would be obtained consisting of well educated men constituting a less highly paid service recruited in India for work not requiring a high degree of scientific attainment, but who would be well qualified to take charge of sub-divisions and whose pay would be sufficiently good to place them beyond the temptation inevitable to men responsible for the expenditure of large sums of Government money.

This reorganization would in fact constitute a Provincial service under another name.

2. The accepted strength of the cadre provides for one Assistant Engineer to each Executive Engineer, so that there is a marked demand for well-trained Sub-Engineers to replace a considerable number of men who have of necessity been placed in charge of sub-divisions, but who, on account of their status and inferior qualifications and character, are quite unfitted for such charges.

On these lines the department would be composed of:—

(*a*) Imperial Engineers recruited in England and in India, highly trained for the more scientific work of the department.

(*b*) A less highly paid service recruited solely in India for other work in the department composed of:—

(1) Sub-Engineers.
(2) Supervisors.
(3) Overseers.
(4) Sub-overseers.

III.—METHOD OF RECRUITMENT OF IMPERIAL ENGINEERS.

1. The magnitude of the Railway and Irrigation works in India, the large sums of money spent and earned by those branches, the varied and difficult work of the general branch, having regard to the increasing demand for works of sanitation and water-supply, all demand a thoroughly efficient Engineering establishment.

This being the case it is clear that an inferior engineer, whatever the economy due to low pay, will be a costly servant to the State and that inefficiency will be not only an extravagance but a positive menace. While it is more than doubtful if the engineers who now receive appointments from the Indian Engineering Colleges are as well educated and trained as the men who are now recruited in England, it is unquestionable that the European is as a rule far superior to the Indian and even to the country-born European educated in India in those essentials of character, business and administrative ability without which technical skill alone is of little avail.

While there are signs of improvement, such improvement is likely to be of slow growth, and it is unquestionable that any reasonably high standard of efficiency must mean the employment of a very large proportion of Europeans for a long time to come, not because they are Europeans, but because the necessary qualifications and aptitude and intense love for the profession have not so far been found in India in any appreciable degree. If this be accepted, it will be necessary to lay down the proportion of men to be recruited in England and in India, a proportion which should be subject to revision from time to time as the Indian recruit justifies his fitness for increased employment.

2. Acording to a reply given in the House of Commons on 19th April, 1911, the number of men recruited in England through the Selection Committee of the India Office without competition has been in recent years as follows:—

1908	39
1909	30
1910	30
1911	28

the average annual recruitment may be taken as 30 of which according to rule 10 per cent. must be Indians. The annual recruitment in India for the Provincial service is 14, distributed in the ratio of 9 to 5 or 10 to 5 in alternate years between Assistant Engineers and Upper subordinates.

The present proportion of Europeans recruited in England to Indians recruited in England and in

APPENDIX VII—*continued.*

India is therefore—27 : 17, that is 38 per cent. of the appointments have in recent years been given to Indians; but it must be remembered that the recruitment from England has at the same time been considerably below what is considered to have been necessary to maintain the Engineer cadre at its proper strength and efficiency.

The Local Government is of opinion that, for the present at any rate, the proportion of Europeans, *i.e.*, including Europeans recruited in India, to Indians in the department might be fixed at 2 to 1.

With say 45 annual appointments therefore 30 would be Europeans and 15 Indians whether recruited in England or in India.

3. *Recruitment in England.* — Every candidate should have been through a three years' University course and obtained one of the University degrees mentioned in Appendix I of the present rules for appointment of Assistant Engineers in England, in order to ensure that he shall have undergone a proper course of study at the best Engineering Colleges in the United Kingdom and that he has qualified up to a high standard.

The A.M.I.C.E. examination alone should not be considered a sufficient qualification.

4. The Selection Committee should consist of—

(1) A retired Lieutenant-Governor or Chief Commissioner as President.

(2) An eminent Engineer with considerable experience in England preferably a past President of the Institution of Civil Engineers.

(3) An eminent Principal or Professor of an Engineering College of high standing in England.

(4) A recently retired Engineer of the Indian Public Works Department.

(5) An engineer of the Indian Public Works Department actually in service, selected from the men who may be at home on leave.

This Committee should select two or three times as many candidates as there are vacancies.

5. The candidates should be from 21 to 24 years of age and selected candidates should be required to undergo a competitive examination, the order of passing determining the seniority of the candidates who receive appointments.

On arrival in India the selected candidates should undergo a course of practical training for one year and should only be confirmed if this has been satisfactory, otherwise, they should, in the case of Europeans, be paid their passage money back to England.

6. The number of Europeans fixed for recruitment in England should include Royal Engineers who may be appointed to the permanent scale of the department, but such officers should only come in at the bottom of the list, otherwise not only is the promotion of Civil Engineers to the administrative appointments prejudicially affected but also the amount of pension they may earn.

Under the present rules additional pensions are granted to Civil Engineers who have served certain terms in the administrative grades, and from this they may be debarred if senior Royal Engineers are brought in over their heads.

7. *Recruitment in India.*—Recruitment in India should preferably be from one Central College for Engineers only.

Entrance to this college should be by selection combined with a qualifying examination; the selection committee to consist of the Principal of the College, the Director of Public Instruction, and one of the Chief Engineers of the province.

Candidates who have passed successfully through a three years' course and after a final competitive examination have been successful in obtaining appointments, should be appointed as probationary Assistant Engineers and should undergo a course of practical training for one year. If this has been satisfactory, they should be confirmed, otherwise their services should be dispensed with.

The age for appointment should be the same as for men recruited in England. The standard of training at this Central College and the standard of the final examination should be the same as fixed for candidates recruited in England.

The most suitable College in His Honour's opinion for the training of Engineers for the Public Works Department is Rurki but emphasis must be laid on the fact that the stamp of recruits from Rurki in recent years has been disappointing and there is reason to fear that it is deteriorating.

The general education of the students who now enter Rurki is as a rule defective. The Anglo-Indian recruits of the present day are much below the class of those who entered thirty years ago and the Indian recruits are decidedly inferior. Not only is this the case but the course of training at Rurki is markedly inferior to the course of training at the Universities which it is recommended that recruits from England should undergo. Until a better class of recruits is obtainable in India and the College is thoroughly reorganised to conform to the standard of training at the Universities in England, it will not, in the opinion of the Local Government, be possible to train Engineers with the same educational qualifications as can be obtained amongst those recruited in England.

It will therefore be necessary to restrict the number of appointments to those only who have approximated very nearly to the standard of the men appointed in England and for several years at least to give a greater proportion of the appointments than the two-thirds suggested to the men recruited in England.

The results of the final examination for the Engineering students at Rurki are known in July and there should be no difficulty in selecting the number of men who have qualified for appointments up to the required standard, subject in the case of Indians, to a maximum of one-third of the total number of recruits required in any year; the balance to make up the full number would then be selected from the candidates in England in the order of merit of passing the final competitive examination.

IV.—SYSTEM OF TRAINING.

1. The present system of departmental examination is considered sufficient. The Local Government would however recommend that greater facilities be given to officers to go to Europe in order to visit and report on works.

Modern Civil Engineering is a highly specialized profession and progress in methods and materials of construction is very rapid. A Civil Engineer, if he is to remain professionally efficient must therefore study up-to-date methods and appliances for executing work. The rules for the grant of study leave to officers of the Royal Army Medical Corps and Indian Medical Service should, it is considered, be extended to officers of the Public Works Department.

V.—CONDITIONS OF SERVICE.

1. It would appear desirable to the Local Government that a distinctive title should be given to the service since the term Public Works Department is used both by subordinates and clerks and hardly distinguishes an Engineer. The title suggested is Imperial Engineer Service corresponding to the title of Imperial Forest Service for the superior officers of that branch.

2. The Local Government is of opinion that the rules in the code I/427—430 relating to inefficient officers should be enforced with greater strictness in order to get rid of such officers.

3. The present post of Secretary to the Government of India is as a rule held by an officer of the Irrigation branch and the Local Government is of opinion that there should be either two Secretaries to the Government of India, *i.e.*, one for each branch, or that the post should be given to either branch in rotation.

4. The Local Government holds strongly the opinion that the number of Temporary Engineers should be reduced to the requirements of work of a purely temporary nature.

The lamentable shortage of Engineers on the permanent strength has necessitated the employment of this class, in many cases for a long term of years, and in some cases in charges which should be held by permanent Engineers. The result is a discontented class of men, mostly of inferior qualifications, who have a very real grievance in that whilst often performing the same duties as permanent Engineers they draw considerably less pay and have very precarious prospects.

VI.—CONDITIONS OF SALARY.

1. The system of annual increment in salary meets with general approval.

2. Promotion to Chief Engineer, 1st class, is so often blocked that many specially deserving officers never obtain a chance of promotion to the higher rate of pay or only do so shortly before they retire.

His Honour considers that there should be only one class of Chief Engineer as for Commissioners of divisions in the civil service, and that the rate of pay of a Chief Engineer should be Rs. 2,750. A Secretary to a Local Government or administration should get in addition a local allowance of Rs. 250 as at present.

VII.—CONDITIONS OF LEAVE.

1. The Local Government considers that the amount of leave allowed under the existing rules is sufficient, but that furlough allowances at present are inadequate in the case of junior officers and debar men from taking as much furlough as is desirable for their health's sake. Under the present rules an Imperial Engineer going on furlough to England is entitled to furlough allowance as follows:—

After 8 years' service	£279
,, 15 ,, ,, ...	£427-10-0

The Local Government would recommend that these allowances be increased to £350 after 8 years' service and to £500 after 15 years' service.

2. The desirability of granting study leave has already been noted on.

3. The Local Government considers that the Indian Service leave rules should be abolished and there should be one set of rules for all Engineer officers.

VIII.—CONDITIONS OF PENSION.

1. His Honour is not prepared to recommend any proposal for increased pensions, other than invalid pensions. The non-effective charges in His Honour's opinion are already too high. His Honour would however recommend greater liberality as regards invalid pension which might be increased in accordance with the following scale:—

Year of completed service.	Invalid pension, Civil Service Regulations, Article 641.		Proposed invalid pension.
	Amount calculated on a percentage basis.	Fixed maximum.	
1	2	3	4	5
10	20/60	Rs. 2,813	Rs. 1,600	Rs. 1,400
11	21/60	3,150	1,400	1,700
12	22/60	3,520	1,800	2,000
13	23/60	3,910	2,200	2,400
14	24/60	4,320	2,600	2,800
15	25/60	4,750	3,000	3,200
16	26/60	5,200	3,000	3,350
17	27/60	5,670	3,000	3,500
18	28/60	6,260	3,000	3,650
19	29/60	6,670	3,000	3,800
20	30/60	7,200	4,000	4,000

IX.—FAMILY PENSION FUND.

1. The advantages of a compulsory Provident Fund are generally recognized, but the resulting provision for the wife and family in the event of the death of the officer during his term of service is wholly inadequate.

His Honour would therefore be glad to see a Family Pension Fund established on a sound actuarial basis and is of opinion that Government might act generously in this matter but whether Government could afford to pay pound for pound into it must, His Honour considers, be left to the Government of India to determine.

X.—GENERAL.

Present constitution and working of the department.—As regards the new system of recruitment from England the Local Government is of opinion that the recruits hitherto received under this system are on the whole satisfactory, but that a still better class of recruits could be obtained on the lines advocated in section III, paragraphs 3, 4 and 5.

2. As regards recruitment in India the Local Government has already expressed its opinion on the recruits who are now received from Rurki and has made suggestions with a view to securing a better stamp of men, *vide* section III, paragraph 7.

3. As regards the comparative merits of Europeans and Indians, the Local Government has already expressed its opinion in section III, paragraph 1.

His Honour holds strongly to the opinion therein expressed that the European recruited in England is much superior to the Indian in all those essentials of character, business and administrative ability without which technical skill is of little avail and is, as a rule, in addition, superior in technical skill. It will therefore, in His Honour's opinion, be necessary if a reasonably high standard of efficiency is to be maintained to employ a very large proportion of Europeans in the service for a long time to come.

The objections to the employment of temporary Engineers to the extent to which they are employed at present and to the placing of subordinates in charges for which they are not qualified have been stated in section III, paragraph 1, section V, paragraph 4.

4. His Honour would lay emphasis on the present inadequacy of the present staff of Engineer officers.

The Irrigation Commission of 1901-1903 made the following remarks on the necessity for an increase in the Engineering staff:—

"In every province which we have visited, wherever we have taken evidence and made or received any proposals for the extension of works, we have been uniformly met with the complaint of the lack of Engineer officers. We have reason to think that this complaint is well-founded. It has been pointed out to us that the scale which has been sanctioned for each province is insufficient for present requirements; that the actual working strength is generally much below that scale; and that matters are getting worse every year, as, owing to irregular and insufficient recruitment in the past, the number of annual vacancies exceeds the number of new recruits. We have been told not only that the size of divisional charges is much larger than formerly, but also that the Executive Engineers are assisted by a less efficient staff: sub-divisions which used to be held by Engineers of English education being now in charge of subordinates or of Engineers temporarily employed."

"The sufficiency of the strength of the Public Works Department for the current duties which it has to discharge, and the adequacy of the present recruiting arrangement are administrative questions with which we have no immediate concern; and we have not therefore considered these complaints very closely. We cannot however but recognize that the successful prosecution of the programme of new irrigation works which it has been our duty to propose, will largely depend on the maintenance of the *personnel* of the Public Works Department at an adequate strength; and that, if even only a portion of that programme meets with the approval of Government, it cannot be completed within a reasonable time unless the staff of Engineers be largely increased and a permanent increase will be required for purposes of

investigation and construction, and also of subsequent maintenance and management. We need not dwell on the fatally wrong policy of spending large sums on new works and grudging the small expenditure necessary for their proper design, supervision, and management."

Although ten years have elapsed since the above opinion was recorded, the number of Engineer officers has not kept pace with the expansion of Public Works such as Irrigation, Sanitation, Water-supply, Roads and Buildings, with the result that the case is even worse now than it was ten years ago and the present staff of Engineers is quite inadequate to cope with the large amount of work it is now required to undertake. As a result of this subordinates have of necessity been placed in the charge of sub-divisions for which they are in very many cases quite unfitted by reason of their status, inferior qualifications and character.

For the same reasons it has been necessary to employ temporary Engineers in charges both divisional and sub-divisional which should be held by permanent men. These temporary men, as a rule, possess poor qualifications and have poor prospects. As a result we now have a considerable body of inferior Engineers, many of whom have been employed for a considerable term of years and who are in consequence not unnaturally discontented.

The great temptations to bribery to which the subordinate staff is open in a large spending department, the inadequacy of the superior supervising staff and the consequent survival of the old bad traditions which our Indian Engineers, with few exceptions, have not shown themselves strong enough to resist, has led to frequent dissatisfaction with the work of the department in recent years and urgently demands an increase in the superior supervising staff.

The Local Government is strongly of opinion that a much stronger and carefully selected proportion of Europeans should be employed in the Public Works Department than is at present the case.

ANNEXURE.

The Public Works Department Provincial Service.

From *Pioneer* of August 14, 1912.

The history of the Provincial service of the Public Works Department ending with its last phase, the resolution of the Government of India of the 15th May, 1912, announcing the sanction of the Secretary of State to the introduction of another revised scheme, is in many respects a curious one. To trace its main features on broad lines, up to the year 1882 the Indian College appointments were open to all comers without any question of domicile in the country or race distinctions; and although there were certain differences in the matter of leave rules and pensions to the disadvantage of those appointed in India all officers of the department drew precisely the same rates of pay. It was free to any candidate to aim at entering the service through the home channel or in India as he might deem it expedient in his own interests. In 1882 the first important change occurred, the Indian College appointments were restricted to Natives of India, that is to Indians and domiciled classes and Europeans were debarred. But not even then was any differentiation in salaries introduced, and all officers, whether Natives of India appointed in the country or Europeans recruited in England, continued to draw salaries on the same scale. Up to 1882 the service attracted not only the cream of European youths educated in India, but also, to some small extent, men from beyond the borders of India, altogether: officers such as Sir William Garstin and Mr. Moylefield were in no sense the products of India or of Indian education and though Englishmen became ineligible in the subsequent two years the department was still replenished by the best European blood that India could supply. In neither period were the best Indians to the fore as the Engineering profession was not in accordance with their inclinations, prejudices or family traditions.

A still greater change came into force in 1892 when the Provincial service was introduced. It was ostensibly the result of the recommendations of the Public Service Commission of 1888; but it seems probable that the Government of India or the Secretary of State had previously some idea of reducing the salaries of men appointed in India on the occurrence of a suitable opportunity, in which case the report of the Commission may have given the opportunity sought and have meant little more than that. It is difficult in any other way to account for the manner in which the Provincial Scheme of 1892 was framed. It ignored what seems to have been the main intentions of the Commission in its report, and not altogether without reasons, for the report, it must be admitted, was a somewhat perfunctory affair. Considering the vast importance of the Public Works Department in the future development of India, and the fact that its officer strength was nearly equal to that of the Civil Service and its subordinate establishment larger, it is remarkable that while the subject of the Civil Service received such careful and exhaustive examination, the department should have been dismissed in such few words. And even those few words were peculiar. "The Commission is informed" it was said by one very competent witness "that at present a Coopers Hill man is sometimes kept for fifteen years manufacturing bricks and lime and putting them together." Whether the Commission imagined that Coopers Hill Engineers loaded and fired limekilns with their own hands, pugged brick earth with their own feet, and subsequently performed the duties of a bricklayer is not clear, but, putting it briefly and in its broad sense the above, as a definition, is not a bad description of an engineer's duties. The engineer usually is a man who is putting things together and bricks and lime together may mean large buildings and bridges and important irrigation works. Ballast and mortar together form concrete—concrete and steel together and there is reinforced concrete; a number of bits of steel together and may be a great railway bridge; but to the members of the Commission it was ridiculous that Coopers Hill men should be so employed and they considered it high time that there should be a second rate class of Engineers to relieve them of drudgery. They would not appear to have realized that, although there are details of an Engineer's work for which high qualifications are not essential the department possessed a large subordinate establishment for such purposes.

But if the scheme of 1892 were intended to be independent of the views of the Commission it was unfortunate that it should have been introduced at that particular time; it was only natural that it should have been ascribed to the Commission's recommendations. And it was particularly unfortunate for another reason. The avowed purposes of the Public Service Commission were to arrive at the best means of improving the prospects of Natives of India by opening the road to more of the higher posts of all services to them. The Civil Service in addition to its covenanted officers, possessed a lower Indian appointed establishment whose prospects, by means of a Provincial service, it was possible to advance. The Public Works Department had no such corresponding establishment: its officers were all Imperial, and consequently any Provincial scheme, not confined to the subordinates of the department, must necessarily have entailed a degradation, instead of improvement, on former conditions. The point was one of vital importance, and without a radical change in the composition of the department, there was no way out of it. Something however had to be done and the result was what is known as Sir Charles Elliott's Provincial Engineer Scheme of 1892. The scheme made no provision for a separate engineer establishment, for the less important work of the department, as was apparently contemplated by the Public Service Commission; in fact it might have been framed on orders which said "Never mind the Commission but reduce the pay of the appointment made in India" as if that, and that only were the aim. It merely created a new superior service on the same list as the Imperial men to work side by side with them, only, except in Chief Engineer class, on two-thirds the salary. Except in the matter of pay, the two services were co-equal; and the attempt to give some justification to the scheme by listing the less important charges as provincial proved impracticable. It is sometimes supposed that the "two-thirds" idea originated with

the Commission, but this is an error. Sir Charles Aitchison and his colleagues never touched on the subject of emoluments in their report. Indeed, by a curious irony of fate, the fraction in question appears to have been derived from the analogy of the statutory Civil Service which the action of the Commission may be said to have abolished. It was only natural that such a scheme should have been received with dismay. By 1892 the home recruited engineers were no longer what they were in the early days of the Coopers Hill system. The freely expressed grievances of the senior Coopers Hill men who had been attracted to the service by a very misleading prospectus, had not stopped this source of recruitment altogether; but the supply was no longer of the same class, and rightly or wrongly the Rurki Engineers believed themselves to be the equal of the officers appointed by the Secretary of State. In that frame of mind they bitterly resented working shoulder to shoulder with men on pay so superior to their own, and though the Imperial officers were not directly affected, the scheme came to them as a reflection on the importance of their service, lowering at a blow its status and efficiency. Efficiency in fact was bound to suffer, not only did the scheme introduce into the department a body of engineers thoroughly discontented with their position, but it was not to be expected that the service would be as popular as it was when Rurki produced such officers as Garstin or Willcocks, Field and Macdonald, and others who established a reputation for themselves in India and Egypt. At the transition stage, in spite of the changed conditions, a number of able men doubtless adhered to their intention of embarking on a profession for which they had been destined from an early age; but the average quality of the recruits had a downward tendency. The best Europeans in the country no longer cared to compete, the lists of successful candidates for the guaranteed appointments became almost exclusively Indian and to Indians of the better class the engineering profession had never been attractive. If they entered it was for the sake of some form of government service and on account of the difficulty or impossibility of obtaining other appointments more to their taste, but not from any aptitude or love for engineering. It is possible that many of them were amply paid for what they were worth; but as time went on their numbers increased and with their number the voicing of grievances. The general weal of the service was plainly suffering. It was not that time disclosed any fresh causes for dissatisfaction. The scheme at the end was just what it was known to be at the beginning, but every year brought an accession to the ranks of the malcontents, and after about a decade the Government apparently felt that the position called for reconsideration.

I believe I am correct in saying that the department, then consulted and taken seriously into confidence for the first time, spoke with no uncertain sound. Its members have never been in favour of a Provincial Service. They were of opinion that there was no room for a service of Proviincial engineers sandwiched, so to speak, between the Imperial officers and the subordinates, and with scarcely a dissentient voice they condemned the scheme in the form it had assumed. They contended that the pecuniary value of the operations of the department was so great that an inferior Engineer, whatever the economy due to low pay, was a costly servant to the State; that inefficiency was not only an extravagance, it was a positive menace, and the menace was accentuated because the Provincial service was discontented to the core. It is believed that the Railway and Irrigation officers in particular asserted that the Provincial system was unlikely to produce recruits of the stamp required for the important work of these branches of the department; and it was obviously impossible to force the whole Provincial establishment on the Buildings and Roads branch, the proportion of Imperial engineers would be so small that the effect would be disastrous. In short the weight of opinion then expressed pointed to the restoration of the department to its former Imperial conditions in some shape or form or a still greater degree of differentiation in the direction of a Provincial subordinate service. There were many reasons why in the circumstances of the department it should be wholly Imperial. The magnitude of the interests of Railway and Irrigation in India, the large sums of money spent and earned by these branches, the varied and difficult work of the general branch of the service all point to the necessity for a thoroughly efficient engineer establishment. Moreover, when the accounts branch of the department—with far less responsibility and need of character and initiative, less study to keep abreast of the times, less exposure and isolation and greater comforts and amenities—was being maintained on an Imperial footing, it was anomalous that the engineers should be consigned to a position so inferior to that of their auditors. But if on the other hand the views of the Public Service Commission were sound and it was felt that there was a genuine demand for a second class engineer agency, it would have been consistent to have given practical effect to the belief and to have divided the services in a more wholesale manner. The subordinate establishment was in need of improvement; nothing had been done for it for years, and the opportunity presented itself. In an organization which provided only one Assistant Engineer to each Executive, there was a marked demand for highly trained sub-engineers for the charge of sub-divisions, from which they might rise to divisional charge, if found so qualified. In fact there might have been combinations of the two main systems in various ways, a certain number of the best men being appointed on an Imperial footing and the rest to a Provincial sub-engineer service on admittedly lower salary and status or all appointed to the sub-engineer service with the prospect of transfer to the full emoluments of the Imperial engineer if found so qualified. The task of framing any satisfactory Public Works Provincial scheme, difficult enough at the start, was however rendered still more difficult by the shape the first scheme had taken and the manner in which it had been announced. The long delay was doubtless owing to this reason and while the years were passing another factor urgently affecting the Imperial establishment came into play. A time-scale had been sanctioned for the Opium department in 1906 and was followed by a similar scale of pay for the Enrolled list. The scale for the latter was cast on such generous lines that it was impossible for other Imperial services to remain as they were. The scheme for the Imperial Forest establishment came into force in January 1907 and the Public Works department grew uneasy. Further delay was clearly out of the question and forced by the pressure of events, the reorganisation scheme of 1908 was launched.

It is unnecessary to refer to the Imperial part of it which merely followed the time-scale sanctioned for the Forest department. In the case of the Provincial service, a sort of middle course was adopted. In many respects the prospects of the Provincial engineers were improved, but they were placed on a separate list; and this action coupled with the substantial improvements in the salaries of the Imperial officers, caused more discontent and disaffection than had ever previously existed. As a matter of fact, if the question be examined dispassionately, the separation of the lists, the main feature of the reorganisation of 1908, was not in itself unreasonable. If the Indian college engineers were as well qualified in technical and administrative skill as the home recruits, they were worthy of the same salary; but if the Provincial service had been introduced on account of a need for a lower paid agency for the less scientific work of the department, the complete separation of the two establishments was not only defensible but was common sense. The 1892 scheme was purely arbitrary, here at any rate was some show of principle; it was nevertheless made the special rock of offence. The Provincial engineers, almost in a body, declined to accept the new conditions, accompanied by, what they considered to be, enhanced social degradation and breach of faith. All their earlier memorials had prayed for reinstatement to the Imperial establishment and their hopes were centred in that direction. They knew that the grievances of the department of the past had been largely directed towards equalization of emoluments for all officers, military and civil, doing the same work. The 1892 scheme, with all its disadvantageous disparity of pay had declared that "in all other respects there shall be no distinction between the two services." The inequality of pay to

two sets of officers with the same duties and responsibilities was so marked that the Provincial men had hopes of rectification in the direction without disadvantages in any other. They had not anticipated the separation which dashed their hopes to the ground and their disappointment was unbounded. They felt that in asking for bread, they had received a stone. The discontent was so pronounced that yielding to importunity, Government faced the situation once more, and the result is shown in the recently announced scheme of 1912. The 1912 reorganization resorts to the general lines of the scheme of 1892 and there is again no distinction between the two services except in the matter of pay. The only underlying principle would appear to be that Europeans with a longer and more expensive course of education, serving in a climate prejudicial to their health in a country which means separation from families, and all the other personal and pecuniary disabilities, should be paid on a higher scale than Indians employed in their own country. Indeed the Honourable Mr. Gokhale proposed in Council to give this principle more definite shape. In urging the more extended employment of Indians he suggested that they should be on the same general scale of pay as the Europeans but that the latter should be granted additional personal allowances as compensation for service in a foreign country. The principle may be plausible enough at first sight, but it is very questionable whether it should be admitted. If the future policy of Government should be one of allowing Indians a greater share in the work of their own country when they show themselves fit for it, there is no reason to pay a European engineer higher solely because he is a European. If as an engineer he is no better than the Indian, there is no reason to import him at all. But it is common knowledge that he is better and for the better article it is sound policy to pay the price. Nearly forty years ago a very distinguished Irrigation officer remarked that in the course of his experience he had not known a single native Assistant Engineer worth his pay. He may have been unfortunate and no doubt some progress has been made since that time, but it was only a short time ago that a disinterested observer, Sir Valentine Chirol, wrote: "Until quite recently the educated classes have held almost entirely aloof from any but the liberal professions. Science in any form has been rarely taken up by University students or for every B.Sc. the honours lists have shown probably a hundred B.A.'s. The Indian National Congress itself as it represented mainly these classes naturally displayed the same tendencies, and for a long time it devoted its energies to so-called political problems rather than to practical economic questions. Hence the almost complete failure of the Western educated Indian to achieve any marked success in commercial and industrial undertakings, and nowhere has that failure been more complete than in Bengal, where it would be difficult to quote more than one really brilliant exception." The one exception Sir Valentine refers to is Sir R. N. Mukerjee of Messrs Martin and Co., an engineer and business man of marked ability, and there have been other exceptions, but being exceptions they prove nothing beyond the rule. The fact is no reflection on the brilliant intellects of India because the best intellects of India have never been devoted to engineering science; and to look the question fairly in the face, the men who have entered the profession have not shown themselves conspicuous either in technical knowledge or in those essentials of character and sense of responsibility in emergencies and business and administrative ability, without which technical skill alone is of little avail. There are signs of progress in the right direction even since Sir Valentine Chirol wrote his work on Indian Unrest, but India is a country which moves slowly, and those who are most intimately acquainted with the working of the Public Works department are well aware that any reasonably high standard of efficiency must mean the employment of a very large proportion of European officers for a long time to come, not because they are Europeans, but because the qualifications and aptitude and intense love for the profession have not so far been found in India in appreciable degree. It would have been well if this had been realized at the time the first Provincial scheme was framed. If this scheme created difficulty the difficulty is intensified by that of 1912, the principle on which both are founded is unsound, and the system, under which ten per cent. of the home appointments are given to Indians, without competition with the Europeans, only adds to the inconsistency of the situation. All that can be said is that both parties appear to be satisfied for the time and discontent has been allayed. The Provincial engineers may congratulate themselves on the substantial improvements granted to them, and the Government, in their freedom from adverse criticism at the moment, may feel themselves in the position of the Provincial Mayor who plumed himself on having "held the balance even between right and wrong."

APPENDIX VIII.

Memorandum prepared by the Government of Bengal relating to the Public Works Department.

(1) Present Regulations as to Recruitment, Training, and Probation, and whether these Regulations are satisfactory.—The cadre of the Bengal Public Works Department, as at present sanctioned by the Government of India, consists of 49 Engineer officers. This is divided as follows: 34 Imperial and 15 Provincial.

The recruitment for the Imperial Service is in accordance with the Appendix VIII of the memorandum prepared by the Government of India for the Public Services Commission, 1912.

Each year the number of appointments to be made of Assistant Engineers in the Public Works Department is advertised and applications for the same are invited. Selection is then made in accordance with the advice of the Selection Committee appointed by the Secretary of State.

Every candidate, except natives of India, must be a British born subject of European descent, and at the time of his birth his father must have been a British subject either natural born or naturalized in the United Kingdom.

Natives of India, who are British subjects and are not qualified under the above regulation, are eligible for appointment and shall be appointed to the extent of 10 per cent. of the total number of Assistant Engineers thus recruited, if otherwise duly qualified.

Candidates must produce evidence that they have obtained (1) one of the University degrees mentioned below, (2) passed the A.M.I.C.E. Examination or obtained such other diploma or distinction as may, in the opinion of the Selection Committee, be accepted as approximately equivalent to the degrees mentioned below.

It is further laid down that it is advisable that candidates who have been through a college course should have had at least one full year's practical experience of Civil Engineering under a qualified Civil Engineer. Those who have taken no college course should have had a full three years of such practical experience. If a selected candidate has not, in the opinion of the Selection Committee, had sufficient practical experience, he may be required to undergo, after arrival in India, a year's probation.

List of Degrees.

University of Oxford.—B.A. (in the Final Honours School in Engineering Science).
University of London.—B.Sc. (Engineering).
University of Cambridge.—B.A. Honours (Mechanical Sciences Tripos).
University of St. Andrews.—B.Sc. (Engineering).
University of Glasgow.—B.Sc. (Engineering).

APPENDIX VIII—*continued.*

University of Edinburgh.—B.Sc. (Engineering).
Victoria University of Manchester (or Victoria University).—B.Sc. (with Honours in Engineering) and B.Sc. Tech. (Honours Division in the Final Examination).
University of Liverpool.—B. Eng., provided the degree be obtained by passing the examinations of the University.
University of Leeds.—B.Sc. in Civil or Mechanical Engineering.
University of Sheffield.—B.E. (First class in Final Examination).
University of Birmingham.—B.Sc. (Engineering) provided that the Engineering Matriculation Examination shall have been passed before entry upon any course of study which forms part of the degree course; and that a regular course of study, occupying not less than three academical years, shall have been pursued between the passing of such Matriculation Examination and the passing of the Final Examination for the degree.
University of Dublin.—B.A.I.
Royal University of Ireland.—B.E. and M.E.
University of Wales.—B.Sc. (in the Department of Civil, Mechanical or Electrical Engineering).
University of Durham.—B.Sc. in Civil, Mechanical, Electrical Engineering or in Naval Architecture, provided that the Matriculation Examination for Engineering and Naval Architecture shall have been passed before entry upon any course of study which forms part of the degree course.
University of Bristol.—B.Sc. in Civil or Mechanical Engineering.
Other degrees.—Any other degree of a University in the United Kingdom which may hereafter be recognised by the Council of the Institution of Civil Engineers as exempting from passing the examination for Associate Membership.

The recruitment for the Provincial Service is from the Sibpur College of Engineering, and the appointment is made in accordance with the following rules:—

One appointment as Apprentice Engineer will be made every alternate year from the regular students who have completed the full course of study in the Civil Engineering branch of the Engineering Department of the Civil Engineering College and have passed the Final Examination, either University or College, held at the end of this course within not more than six academic years of their first admission in the first year class of that college, and who have qualified in the year's practical training in the Public Works Department.

If the Apprentice Engineer serves his apprenticeship satisfactorily, he will permanently be appointed as Assistant Engineer in the Provincial Service of the Public Works Department.

In every fourth year one Upper Subordinate of the Public Works Department will also be appointed as Assistant Engineer in the same service.

The number of regular students of the Civil Engineering branch of the Engineer Department of the Civil Engineering College, Sibpur, who having passed the final College or University Examination held at the end of the college course training will be received for practical training, will be six.

The practical training will be from 1st November to 31st October of the following year.

The Governor of Bengal will select six students who have in the year obtained the Upper Subordinate or Sub-Engineer certificate of the Joint Technical Examination Board and have been trained in one of the following institutions:—

Apprentice Department, Civil Engineering College, Sibpur	3
Dacca School of Engineering	3

These six candidates will undergo a similar practical training to that of the regular students of the Engineering Department of the Civil Engineering College.

When the practical training is over, a Board of Examiners will be appointed by Government to conduct the practical examination which will be designed to test candidates in those qualities, which, independently of book work and theory, go far to make an efficient officer.

The Board is composed of—

Superintending Engineer of the Public Works Department ...	*President.*
Executive Engineer	*Members.*
A Professor of the Civil Engineering College, Sibpur	*Members.*

The examination is to be essentially a practical one as far as possible conducted orally and in the field. The examination is to be held in the month of November each year.

The following schedules of marks are used at this examination:—

I.—Schedule for competition for guaranteed Assistant Engineer's post.

	Marks.
(1) Handicraft examination	500
(2) For marks gained by the candidates in the Engineering and drawing groups of the Civil Engineering branch of the examination held at the end of course of the Engineer Department of the Civil Engineering College	1,000
(3) Practical levelling	250
(4) Do. Engineering	250
(5) Preparation of materials	250
(6) Knowledge of simple accounts	250
(7) Ability to prepare, use and apply working drawings	250
(8) Estimating	250
(9) Riding	250
Total	3,250

II.—Schedule for competition for posts in Public Works Department subordinate grades.

	Marks.
(1) Handicraft examination	1,000
(2) Practical levelling	250
(3) Do. Engineering	250
(4) Preparation of materials	250
(5) Knowledge of simple accounts	250
(6) Ability to prepare, use and apply working drawings	250
(7) Estimating	250
(8) Riding	250
Total	2,750

NOTE.—The standards of the handicraft examination of both the Graduate and the Overseer courses shall be approved for the purposes of this examination by the Public Works Department.

The local Government in reviewing the results will take into consideration the reports on the character and general fitness of the candidates, which are submitted by the officers under whom they have served during their practical training. They will take the marks as awarded under the above Schedule (No. I) into account in deciding the award of the guaranteed post of Assistant Engineer and will arrange the candidates on the list in order of merit, the first candidate on the list being appointed as Apprentice Engineer to the Bengal Public Works Department Provincial Service in each alternate year.

In deciding the filling of the posts in the subordinate grades, they will prepare a list of merit in a similar way to that described above, making use of the marks awarded in Schedule II.

Those who are *ex*-students of the Engineer Department of the Civil Engineering College will usually be appointed to the first grade of Overseers, while those who hold the Upper Subordinate or Sub-Engineer certificate of the Joint Technical Examination Board will be placed in the second grade, the Bengal Government showing preference to those trained at Bengal Institutions.

Regarding the method of recruitment, the present method of recruitment for the Imperial Service has so far produced satisfactory results. It is, however, desirable that an Imperial officer of the Public Works Department, selected from the men who are each

APPENDIX VIII—*continued.*

year on leave in England or officers who have recently retired, should be added to the Selection Committee.

It is also desirable that it should be provided that Provincial Service Engineers may be selected for transfer to the Imperial Service if found of suitable attainments, subject to the condition that the proportion of officers so promoted to Imperial officers otherwise appointed shall never be greater than one to nine.

It is provided in the regulations that 10 per cent. of the total number of Assistant Engineers appointed to the Imperial Services annually shall be natives of India, if duly qualified, and no limit is imposed as to the number of such natives of India who may be selected in any one year. While His Excellency the Governor in Council does not wish to press for a modification of this rule, he holds the view that discretion should be left to the Selection Committee to pick out the best men available for this service and that it is undesirable that this discretion should be fettered by the obligation to appoint a certain number of natives of India should such Indians be qualified under the rules.

Regarding the present system of recruitment for the Provincial Service, the weak point of the present system is that Engineers and subordinates are educated and brought up together, obviously a very undesirable condition. It would be better in the opinion of this Government if the appointments of the Engineer establishment were made from a college entirely separate from that from which the subordinate establishment is recruited.

The point has been raised for Provincial Engineers that the existing minimum educational qualifications for admission to the Sibpur Engineering College should be lowered so that students may enter the college below the age of 19; this proposal is now being examined by the Bengal Government as there is no doubt that under the present system the Provincial Engineer recruited from Sibpur is placed at a disadvantage when compared with the Imperial recruit as he may enter the department about four years older.

The present system of training and probation appears satisfactory, except that it is desirable that special opportunities should be given to Indian trained Engineers to visit Engineering works outside their country.

(2) The Rates of Pay and Allowances in force in 1890 and 1900 and at the present time, and whether the present Rates of Pay and Allowances are satisfactory.—The rates of pay and allowances are shown in the statement in Annexure A.

Imperial Service.—The Imperial Engineers have represented that their present salaries are inadequate. Although during the last twenty years the salaries of the Engineers of the Public Works Department have been materially increased, there is ground for the objections still raised that, even with the present rate of salaries, it is extremely hard for an officer in the Imperial Service, if married, to save an amount from his salary sufficient to provide for his wife and family after his retirement or on his death. At present the existing Provident Fund merely gives him 4 per cent. on the deposits made in it, and the Bengal Government is inclined to the view that something might be done by the State in the way of a contribution to this Fund, in order to improve the position of Imperial officers generally. This might prove more effective than a readjustment of salaries which might lead to an increase in the general standard of expenditure. The addition by Government of 50 per cent. of the amount thus saved by each officer, subject to proper limitations, would prove a valuable and not extravagant addition to the attractions of this service.

It is further urged that special allowances should be given to European officers of the Imperial Service stationed in Calcutta. These officers have for some time past felt the hardship of the present conditions, the cost of living for Europeans in Calcutta being at least 50 per cent. higher now that it was 25 years ago. This Government strongly support this proposal and has more than once urged on the Government of India the necessity for such allowances, but so far with no satisfactory result. In the meantime it is increasingly difficult to fill any of the Calcutta appointments in the Public Works Department with European officers, though for the efficient working of the Department it is essential that a portion of these appointments should be so filled.

Provincial Service.—This Government is of opinion that the present rates of pay are satisfactory.

(3) Number of Posts in each Grade and the provision, if any, made in the Cadre for Leave and Training:—

Chief Engineers (one sanctioned temporarily)	2
Superintending Engineers	5
Executive Engineers	18
Assistant Engineers	18
Allowance for absentees	6

(4) Appointment held outside the authorised Cadre:—

(1) Mr. B. K. Finnimore, Chairman, Improvement Trust.

(2) Col. Joly de Lotbiniere, State Engineer, Kashmir.

(3) Mr. A. G. Maflin, Assistant Sanitary Engineer.

(4) Mr. J. C. Stronach, on deputation to Delhi.

(5) Babu Jotindra Nath Mallick, District Engineer, Burdwan.

(5) Whether any addition is required to the present Cadre.—Not at present.

APPENDIX IX.

Memorandum prepared by the Government of Bihar and Orissa relating to the Public Works Department.

(1) The present Regulations as to Recruitment, Training, and Probation, and whether these Regulations are considered satisfactory.—There is a separate cadre for the Engineer Establishment of Bihar and Orissa, but recruitment and training are carried out under rules applicable to the establishments of all provinces, and additions to the establishment are arranged by the Government of India.

The Imperial establishment is recruited from selected candidates appointed in England by the Secretary of State with the help of a Selection Committee, and from the Corps of Royal Engineers on the Indian Establishment. The Provincial Service is recruited from passed students of Indian Civil Engineering Colleges and by the promotion of deserving Upper Subordinates. The system of recruitment is fully described in paragraphs 141 to 166 of the Public Works Department Code, Vol. I.

Recruits for the Imperial Service are expected to have had practical experience on works prior to selection by the Selection Committee in England. If the Committee consider the experience gained is insufficient, appointment to the service is made subject to a satisfactory probation in India of one year in charge of works. Recruits from Indian Colleges to the Provincial Service are first appointed as apprentices for one year during which they are trained on works. Their appointment as Assistant Engineers is dependent on their giving satisfaction during their training.

The Local Government have no objection to urge against the present system of recruitment for either service; but they consider that the period of training for one year as "Apprentice," prior to appointment as Assistant Engineer on the Provincial Establishment, should be abolished in Bihar and Orissa in view of the fact that a preliminary training on works for one year is already required at the conclusion of the College Course before competition for the post of Assistant Engineer. The Apprentice Course, in effect, extends the period of practical training to two years and unnecessarily defers appointment to the Assistant Engineer class. If necessary, appointment as Assistant Engineer may be on probation for one year as in the Imperial Service, in certain cases.

(2) The Rates of Pay and Allowances in force in 1890 and 1900 and at the present time, and whether the present Rates of Pay and Allowances are satisfactory.—A statement is attached showing the pay and allowances in force during the years stated. Although there are separate rates of pay for the Imperial and Provincial Services, all officers are borne on one combined list, receiving their increments annually and rising from the Assistant to the Executive class in the same period, *viz.*, in the 11th year of service. The Local Government do not consider that any alteration is required in the existing rules for either service in the classes of Assistant and Executive Engineer, but they think that the incremental system of pay might be extended to the class of Superintending Engineer, now that Superintending Engineers are borne on separate scales for each province. The numbers on each scale being necessarily small, the separation results in a most unequal system of promotion, taking the class as a whole. A suitable incremental scale, retaining the present minimum and maximum, would perhaps be Rs. 1,500 rising to Rs. 2,000 by annual increments of Rs. 100.

APPENDIX IX—*continued.*

Grades.	Pay.				
	1890.	1900.		1913.	
	Imperial and Provincial.	Imperial.	Provincial.	Imperial.	Provincial.
	Rs.	Rs.	Rs.	Rs.	Rs.

(*a*) Introduced in 1892. (*b*) Introduced in 1893. (*c*) Introduced in 1899. (*d*) Introduced in 1905.* (*e*) Introduced in 1908. (*f*) Introduced in 1912.

* In this year, a local allowance of Rs. 250 per month was attached to the post of Secretary to a Local Government and Rs. 150 to that of Secretary to a minor administration in addition to the grade pay of the post on the Engineer Establishment.

(3) The number of Posts in each Grade and the provision, if any, made in the Cadre for Leave and Training.—A statement is attached, showing the scale which has been submitted to the Government of India for sanction and the actual number of officers employed against it. The scale is the same as that already provisionally approved by the Government of India with an addition of eight officers (equivalent to 20 *per cent.*) as a reserve to provide for absentees on leave. No separate provision is made for officers under training. The preliminary training on works considered necessary is acquired before recruits join the Department as Assistant Engineers. For Departmental training, it is the practice to post Assistant Engineers on first appointment at the headquarters of a division so as to give them an opportunity of acquiring a knowledge of the general routine of duty and the system of accounts, and of studying the vernacular.

Name of appointments.	Number in each grade.	
	As existing.	As submitted to India for sanction.
Chief Engineer	2	2
Superintending Engineers	5(*a*)	5
Executive Engineers	16	17
Assistant Engineers	24(*b*)	15
Provision of Executive and Assistant Engineers for leave.	—	8
Total	47	47

(*a*) Three officiating.
(*b*) Includes Mr. T. S. Malik and Lieutenant Robson, R.E., who are at the disposal of the Chief Commissioner, Delhi.

(4) What Appointments outside the authorised Cadre are held temporarily or otherwise by Officers of the various Services.—The following are the only Officers who are employed outside the cadre:—

One Government Architect.—This is a special appointment, sanctioned by the Secretary of State, carrying a salary of Rs. 800 rising to Rs. 1,000 in five years. The officer holding the appointment is serving under a special agreement and was selected in England by the Secretary of State. Application has recently been made to the Government of India for two Assistant Government Architects to be recruited in the same manner. These additional officers will be required in connection with the Capital works at Bankipore and a number of other works of magnitude either started or in contemplation.

One Sanitary Engineer.—This is also a special appointment sanctioned by the Secretary of State. The present incumbent was appointed in India on a special agreement which provides for a salary of Rs. 1,200 rising to Rs. 1,400 in five years. It is probable that the development of the Sanitary works of the province will necessitate the employment of one or two Assistant Sanitary Engineers.

Three temporary Engineers.—These officers are appointed in India under the ordinary rules applicable to temporary staff (Public Works Department Code, Vol. I, 109–111). The sanction to their appointment is renewed from year to year as occasion requires. One is serving on Rs. 500, one on Rs. 300 and the other on Rs. 250.

(5) Whether any addition is required to the present Cadre.—The present cadre is considered sufficient for the normal requirements of the province. Additional officers will, however, be required during the period the works connected with the new Capital at Bankipore are in progress. It is possible, when the Capital works develop, that it will be necessary to form an additional Circle of Superintendence under a Superintending Engineer who can devote his whole time to the work. The additional temporary staff that will be required can be obtained locally and appointed under the ordinary rules for the employment of temporary staff.

APPENDIX X.

Memorandum prepared by the Assam Administration relating to the Public Works Department.

(1) The present Regulations as to Recruitment, Training, and Probation, and whether these Regulations are considered satisfactory.—The Permanent Establishment of the Public Works Department is recruited from the following sources:—

(*a*) Officers of the Royal Engineers.

(*b*) Civil Engineers—British subjects trained in England.

(*c*) Students of the Indian Engineering College and the Subordinate service.

(*a*) and (*b*) form the Imperial Engineer Establishment.

(*a*) are appointed direct by the Secretary of State.

(*b*) are appointed by the Secretary of State with the advice of a Selection Committee which includes at least one eminent representative of the Engineering profession.

APPENDIX X—*continued.*

The number to be recruited in each year is notified previous to inviting applications.

The appointments are generally made permanent from the date of landing in India in the case of candidates who have had previous practical training.

In the event of any candidate being selected who has not, in the opinion of the Selection Committee, had sufficient practical experience, he is required to undergo, on arrival in India, a year's probation in charge of works, and his final appointment is dependent upon the result of such probation.

(*c*) form the Provincial Engineering Establishment.

The number of the appointments from the Indian Engineering Colleges is fixed by the Government of India and the appointments of subordinates are made by the Government of India on the recommendation of a Local Government or Local Administration.

The Staff of Engineers for Assam is posted by the Government of India according to the requirements of the province from among those recruited from the above sources.

The present system of recruiting Engineers as judged by its results is satisfactory, but for the existing Provincial Training Colleges from which Provincial Service officers are recruited, a thoroughly equipped central residential training college might with advantage be substituted.

(2) The Rates of Pay and Allowances in force in 1890 and 1900 and at the present time, and whether the present Rates of Pay and Allowances are satisfactory.—The following comparative table gives the rate of pay and allowances in force in 1890 and 1900 and at the present time. The present rates of pay and allowances are satisfactory.

—	1890.	1900.		—	At present.	
	Imperial.	Imperial.	*Provincial.		Imperial.	*Provincial.
	Rs.	Rs.	Rs.		Rs.	Rs.

				Ditto, 13th ditto	909	605
				Ditto, 12th ditto	850	570
				Ditto, 11th ditto	800	535
				Assistant Engineer, 10th ditto	750	475
				Ditto, 9th ditto	700	450
Ditto, 3rd „	250	350	250	Ditto, 8th ditto	660	425
				Ditto, 7th ditto	620	400
				Ditto, 6th ditto	580	375
				Ditto, 5th ditto	540	350
				Ditto, 4th ditto	500	325
				Ditto, 3rd ditto	460	300
				Ditto, 2nd ditto	420	275
				Ditto, 1st ditto	380	250

* NOTE.—A special increment of Rs. 50 may be granted by the Local Government to a deserving Provincial Service Executive Engineer who, after completion of five years' service on the maximum pay of Rs. 850, is not promoted to administrative rank.

Executive Officers serving in Assam, except in the districts of Cachar, Sylhet and Goalpara, draw the following local allowances:—

	Rs. per mensem.
Assistant Engineers and Executive Engineers (Imperial Service) ...	100
Assistant Engineers and Executive Engineers (Provincial Service) ...	65

Subject to the provision that pay and local allowance shall not exceed Rs. 1,000 and Rs. 615, respectively.

The Chief Engineer and Secretary to the Local Administration draws a local allowance of Rs. 150 per mensem and the Under-Secretary to the Local Administration draws a local allowance of Rs. 100 per mensem.

(3) The number of Posts in each Grade and the provision, if any, made in the Cadre for Leave and Training.—The number of posts which the Government of India has recommended to the Secretary of State for Assam is 21, comprising 1 Chief Engineer, 1 Superintending Engineer, 10 Executive Engineers, and 9 Assistant Engineers. In this number provision has been made for leave and training.

(4) What Appointments outside the authorised Cadre are held temporarily or otherwise by Officers of the various Services.—The following temporary appointments outside the authorised cadre are held by Temporary Engineers:—One post of Executive Engineer on Rs. 750 with a local allowance of Rs. 100, and two posts of Assistant Engineers on Rs. 250 each with a local allowance of Rs. 65 each.

(5) Whether any addition is required to the present Cadre.—One more Executive Engineer for dealing with sanitary projects is required in addition to the proposed cadre, and this is now under consideration by the Government of India.

APPENDIX XI.

APPENDIX XI.

Note, dated 21st April, 1913, by the Honourable Sir Archdale Earle, K.C.I.E., Chief Commissioner of Assam, on the Public Works Department.

THE IMPERIAL SERVICE.

Recruitment.—The principles which I have advocated in connection with other services are (1) that Indians required to fill important posts should, for the most part, be recruited direct to the superior service along, and on equal terms, with their European *confrères*, and (2) that while the door should be left open for the promotion of exceptional locally-recruited officers, too great reliance should not be placed on this method of recruitment to the superior service. The Public Works Department is peculiarly constituted in that, though it admits of the direct recruitment of 10 per cent. of Indians to the Imperial Service, it also recruits locally for superior posts, but on a lower rate of pay. It shows the latter, locally-recruited (provincial service), officers on the same list as the officers recruited by the Secretary of State, an arrangement which I cordially approve. The Department is peculiar also in that it has a Subordinate Service, which does not quite correspond with other Subordinate Services, inasmuch as the salaries of the higher posts correspond rather with those of members of the provincial services than with those of members of the subordinate services of other departments.

2. Inasmuch as these arrangements were sanctioned quite recently (1912), they may perhaps be left alone for a time. Personally, however, I should much prefer to see all officers required for superior posts recruited on precisely similar terms, it being a condition that officers recruited locally should undergo such a training as would bring them up to the standard of those recruited in England. At present the locally-recruited officer is supposed to be on a par professionally with his *confrère* of the superior service, but I gather that, in fact, he is not. If he were what he is supposed to be, I consider that he should get the same pay. In any case, it seems to me highly anomalous that an officer of such outstanding merit as to be specially selected for an important post like that of Superintending Engineer should, if locally recruited, get less pay than officers recruited direct.

3. *Recruitment of Indians to the Imperial Service.*—The only other remark which I have to make as regards recruitment is that Indians recruited direct should, as far as possible, be residents of the province to which they are posted. As I have stated in connection with the Indian Civil Service, it is for many reasons, administrative, personal and political, desirable that officers should usually be posted to their own province.

4. *Training.*—If, as I have proposed in connection with the Indian Civil Service, a special training institution is established in England for recruits to that service, I trust that the question of providing a training in the same institution for engineers destined to serve in India may be borne in mind. Apart from the great advantage that would accrue from association between European and Indian officers and with recruits for other services in India, the candidates selected for the Public Works Department would be trained specially for work in India, and I consider that such a training would have a very decided advantage over the present system, the general trend of which is towards English practice and results in new recruits being at sea for some time after their arrival in India. Special training in the direction of Indian needs would result in economy.

The training which I advocate above is in respect of recruits selected on their qualifications as at present, the object of the training proposed being directed solely towards Indian needs. This training need not exceed one year. If, in addition, any training in India is considered necessary, this should not be at the expense of the training in England, which I consider most desirable in the general interests of European and Indian officers.

5. *Pensions.*—Imperial Service officers have, I understand, submitted memorials on the subject of their pensions and leave allowances, but I am not in a position to say anything in regard to this matter, as I have not seen the memorials.

THE UPPER SUBORDINATE SERVICE.

1. As noted above, this service corresponds roughly with the Provincial services of other departments. The pay of the service is as shown in the footnote.*

Since these rates were fixed in 1864, not only has the training become more rigorous, but the duties have increased in importance and the responsibilities have become much greater, while the cost of living has advanced very considerably. I would therefore introduce the following combination of grades and time-scale. The lowest grade would be on Rs. 100—$\frac{20}{2}$—200, the second grade on Rs. 200—$\frac{30}{2}$—350, and the highest grade on Rs. 350—$\frac{40}{2}$—550. Following the proportions laid down in rule 62 of the Public Works Department Code, Volume I., three-sixteenths of the total cadre would be in the first grade, five-sixteenths in the second grade, and the remainder in the lowest grade. The usual allowances for holding charge of a sub-division should continue.

2. Experience, however, shows that a considerable percentage of Upper Subordinates prove worthless after a few years, and that others from physical and other causes deteriorate hopelessly at a later stage, and I would, therefore, with the improvements proposed, empower Local Governments to dispense with the services of such men at any period during the first 10 years of their service with a month's pay for each year of completed service, and to retire them compulsorily at a later period on a pension equivalent to that which they would receive if retired on a medical certificate of ill-health.

3. All increments should be subject to stoppage for repeated bad work, and promotions to the Rs. 350—550 grade should be by selection. Officers not promoted to the Rs. 350—550 grade should be eligible for two special quinquennial increments of Rs. 25 for approved service.

4. Upper Subordinates have recently voiced a grievance with regard to their designations, and have asked that their service shall be known as the "Deputy Engineer Establishment," and that they shall be called Deputy Engineers and Assistant Deputy Engineers. I am unable to recommend these requests, as the designations proposed, besides being quite inappropriate in the case of officers performing the functions of an Overseer, would cause confusion by adding to the already long list of names, such as Chief, Superintending, Executive, Assistant and District Engineers. The term Supervisor might, however, be abolished, and the proposed grade of Rs. 100—$\frac{20}{2}$—200 be termed the "Overseer grade," and the two higher grades the "Sub-Engineer grades," while the service might appropriately be designated the "Sub-Engineer and Overseer Establishment."

THE LOWER SUBORDINATE SERVICE.

The standard of education for admission to the colleges is much the same as for Upper Subordinates, but the period of training—theoretical and practical—only lasts two years. The training is of a considerably higher standard than was the case when the present rates of pay were fixed. The service is divided into three grades on Rs. 30—$\frac{5}{5}$—35, Rs. 35—$\frac{5}{5}$—45, Rs. 50—$\frac{10}{5}$—70. Two further special increments of Rs. 10 can be given to officers of approved service in the first grade. These rates are palpably inadequate to secure either honesty or contentment.

* Overseer III ... ... Rs. 60
" II 80
" I 100
Supervisor II 150
" I 200
Sub-Engineer III 250
" II 300
" I 400
with increments of Rs. 50 after 5 and 15 years' approved service in grade I.

al I would raise the pay of the grades to Rs. 45, k. 60, and Rs. 75. Officers rendering approved ser-ce would be eligible for two quinquennial increments of Rs. 5 in each of the two lower grades, and for four quinquennial increments of Rs. 10 in the highest grade. Government should reserve the right of dispensing with the services of inefficient officers on terms similar to those proposed above in the case of the Upper Subordinate Service.

GENERAL.

Obliteration of unnecessary distinctions in nomenclature.—As in the case of the Indian Civil Service, I advocate that there should be a single Public Works Department list, showing by Divisions (1) the officers of the at present so-called Imperial Service, (2) the at present so-called Upper Subordinate Service officers, and (3) the at present so-called Lower Subordinate Service officers.

APPENDIX XII.

Memorandum prepared by the Government of Burma relating to the Public Works Department.

(1) The present Regulations as to Recruitment, Training, and Probation, and whether these are considered satisfactory.

RECRUITMENT.

Imperial Engineer Officers.

(*a*) From Royal Engineers.—No appointments made since 1890. No Royal Engineer Officers at present in Burma.

(*b*) From Officers appointed by the Secretary of State from the Royal Indian Engineering College, Cooper's Hill.—Recruitment from this source ceased in 1906.

(*c*) From Officers appointed by the Secretary of State after nomination by the Selection Committee of the India Office.—The first appointments of Assistant Engineers from this source were made in 1902.

(*d*) Officers appointed direct by the Secretary of State.

(*e*) Officers appointed in India who were not admitted into the Department as Statutory Natives of India.

(*f*) Officers appointed in India in and after 1886 who were admitted into the Department as Statutory Natives of India.

European Officers, whether of Indian domicile or not, appointed from Indian Colleges prior to 1885-86, form class (*e*), while officers appointed in 1885-86 and after belong to class (*f*).

In Burma four officers come under this latter class.

Provincial Service Engineer Establishment.

(*a*) From Students of Indian Colleges (Statutory Natives of India).

(*b*) From Upper Subordinates of the Public Works Department.

Upper Subordinates.

(*a*) From the Thomason Civil Engineering College, Rurki. Up to 1895 this was the principal source of recruitment. Now one appointment is made in every alternate year.

(*b*) Rangoon (Insein) School of Engineering.—Opened in 1895. One guaranteed appointment yearly as Overseer, 3rd grade.

(*c*) From the Lower Subordinate Staff.—One appointment yearly. Vacancies remaining after the guaranteed appointments have been made may be filled by the Local Government from any source desired.

Lower Subordinates.

(*a*) From the Thomason Civil Engineering College, Rurki.—Principal source of recruitment till 1895.

(*b*) Rangoon (Insein) School of Engineering.—Five guaranteed appointments yearly since 1895. One Sub-Overseer has risen to the Provincial Engineer Establishment.

(2) *Imperial.*—During the existence of the Royal Indian Engineering College, Cooper's Hill, the number of appointments reserved for Natives of India was limited to two each year. Since 1886-87 only one Indian from this Institution has been appointed to the Public Works Department in Burma. No Natives of India were appointed during the previous 10 years.

After the abolition of Cooper's Hill in 1906 it was ruled that Natives of India who are British subjects are eligible to the extent of 10 per cent. of the total annual number of Assistant Engineer appointments. So far from 25 to 30 Assistant Engineer appointments have been made annually, but, despite the increase in favour of the Natives of India, no Native of India or Burman has been appointed to this Province in the Imperial Branch of the Department.

Provincial.—Is open to Statutory Natives of India and is recruited mainly from the Indian Colleges. Between 1892 and 1912 the percentage of Indians in Burma has been—Burmans 3·45, Natives of India 13·8, total 16·53. Numerically this comes to 1 Burman and 4 Natives of India, total 5; two were promoted from the Upper Subordinate Class and three recruited from Indian Colleges.

Upper Subordinates.—The percentage of Indians recruited since 1886 has been—Burmans 25, Natives of India 42·65, total 67·65.

During the previous 10 years the percentages were—Burmans 3·9, Natives of India 29·4, total 33·3.

Lower Subordinates.—Almost entirely composed of Indians.

(3) *Imperial Service.*—Present regulations are satisfactory, but it is considered necessary that each recruit should have an Honours Degree or Diploma of some recognised Engineering College and be nominated by the Principal of the College, who should submit to the Selection Committee a confidential report on the general character and special qualifications of each candidate nominated by him.

Special attention should be given to the general character and social qualifications of the candidates in order to maintain the high standard of the Department.

At least one-third of the members of the Selection Committee should be senior officers of the Public Works Department either still on the active list or only recently retired.

The number of Natives of India admitted to the Imperial Service should be limited and it is suggested that this be fixed at 10 per cent.

Provincial Service.—If the Provincial Service is to remain as at present constituted the method of recruitment is considered satisfactory, but exception may be taken to the existing system of appointing two apprentices from the Rurki College to a province where only one obtains an appointment. It is often not possible to place the two apprentices under the same officer for the period of probation and consequently it is very difficult to judge between the respective merits of the two apprentices. This system, it is considered, should be abolished and only those students who have gained the guaranteed appointments should be sent out as apprentices.

TRAINING AND PROBATION.

(a) *Imperial Service.*—It is understood that candidates to be eligible for promotion are required to have undergone a year's training on works after passing through their College course, but as the conditions of work in England and India are so very different this training is not of much practical use and should not be insisted on, but, whenever possible, the selected candidates should have a year's training on works

APPENDIX XII—*continued.*

in India in order to pick up the methods of work and accounts, as well as the Vernacular.

It is not considered advisable to introduce a period of probation after appointment owing to the practical difficuly of making such a safeguard an effective one, while its introduction might have an adverse effect on recruitment. In lieu of the period of probation it would be better to have the Professional Examination (Public Works Department Code, Vol. I, para. 167) made more difficult and of a real practical character which should be passed within three years of joining. Any failure to pass within this period to lead to stoppage of increment, permanent supersession, and possibly forfeiture of appointment.

(b) *Provincial Service.*—All recruits have to undergo a year's training on probation which is considered suitable and on appointment to Assistant Engineer are subject to the same rules as the Imperial Service with regard to passing the Professional and Vernacular examinations.

(2) Rates of Pay and Allowances in force in 1890, 1900, and at the present time, and whether the present Rates of Pay and Allowances are satisfactory.

Note.—Figures in *italics* indicate changes made.

							20th year...	—	—	—	(d)*850*

(a) Two periodical increments of Rs. 50 per mensem were allowed at the end of 4 and 8 years, respectively, for approved service.
(b) A local allowance of Rs. 250 per mensem was attached to the post of Secretary or Joint Secretary.
(c) Abolished in 1905.
(d) A special increment of Rs. 50 per mensem may be granted by the Local Government to a deserving Executive Engineer who, after completion of 5 years' service on the maximum pay of Rs. 850, is not promoted to Administrative rank.

APPENDIX XII—*continued.*

3. Upper Subordinates.

Civilians.		Military.
Rank.	Consolidated Salary.	
	Rs.	Military Subordinates were allowed Staff salaries of their grade in addition to the pay and allowance of their Military rank, but it was stipulated that when the Military pay and allowances of a European Military Subordinate, together with his Staff salary, were exceeded by the Civil consolidated pay of the grade he held his staff pay was to be increased by so much as would make his total pay equal to the Civil pay of his grade. The effect of this rule was to place European Members of the Upper Subordinate Staff on consolidated rates of pay. Recently, however, it was ruled that soldiers entering the Public Works Department after the 14th July 1910, were to draw the Civil rate of pay of the grade to which they may be appointed, ordinarily that of Overseer, 1st grade. Soldiers who were undergoing a theoretical course in a Civil Engineering College on the 14th July 1910, would, in the event of their passing their final examination, be permitted to enter the Public Works Department under the rules in force at the time they joined the College.
Sub-Engineer:		
1st grade ...	400 (*a*)	
2nd grade ...	300	
3rd grade ...	250	
Supervisor:		
1st grade ...	200	
2nd grade ...	150	
Overseer:		
1st grade ...	100	
2nd grade ...	80	
3rd grade ...	60	

(*a*) Allowed 2 increments of Rs. 50 per mensum each for long and meritorious service, the 1st after 5 years and the 2nd after 10 years in the grade.

Remarks.—In order to improve the social status of Civil Upper Subordinates the Government of India have permitted Local Governments to confer on Sub-Engineers the Honorary rank of Assistant Engineer. Limited to 6 per cent. of the total Civil Staff of Upper Subordinates in each list, with the addition of 1 for any fraction.

All Civil Sub-Engineers are classed as gazetted officers.

4. Lower Subordinates

Rank.	Minimum.	Maximum.
Sub-Overseer:	Rs	Rs.
1st grade	50	70
2nd grade	35	45
3rd grade	30	35

Remarks.—Lower Subordinates may be permanently appointed or promoted at any time to any rate of pay that may be deemed appropriate so long as the maxima and mimima limits are observed.

Imperial Service.—The present incremental scale of salaries is considered sufficient to attract the kind of officer required and has its advantages over the old system of graded salaries, but has one great disadvantage in that it is laid down that an officer may not draw more than Rs. 800 per month unless he is in charge of a division or in a charge which is considered as of equal importance. This is unjust to an officer who, though fully qualified, does not obtain a division because there happened to be none vacant. It is considered this rule should be amended and an officer who has been recommended as capable of holding charge of a division should draw his increments irrespective of his being in divisional charge.

After the 20th year of service an Executive Engineer draws Rs. 1,250 per month and increments cease. It is suggested that if, on completing 23 years' service, an Executive Engineer is not promoted, though fully qualified, to Superintending Engineer he should be given a personal allowance of Rs. 150 a month and draw the same until promoted to administrative rank. It also appears unnecessary to have two grades of Chief Engineers and it hardly seems fair that a Chief Engineer who is Secretary to a Local Government should draw Rs. 250 a month extra while one who is Secretary to a Local Administration should only draw Rs. 150. The work of Chief Engineers is the same and it is an anomaly that a Chief Engineer in one province should draw more than a man, probably his senior, in another province differently constituted. It is considered that it would be better to have only one class of Chief Engineer on a fixed salary of Rs. 3,000. There were three grades, but these have been reduced to two and may well be reduced to one. Under existing rules Burma allowance of Rs. 100 is not allowed to Executive Engineers drawing a salary of over Rs. 1,000 a month, whereas in the Forest Department all Deputy Conservators draw an allowance of Rs. 100 respective of the amount of their salary, and it is considered the same procedure should apply to the Public Works Department, *i.e.*, all Executive Engineers drawing salaries of Rs. 1,050 to Rs. 1,250 should be granted a Burma allowance of Rs. 100.

Provincial Service.—The Service as now recruited is practically confined to Natives of India and promoted Upper Subordinates, and consequently the present rate of pay is considered ample, but so long as the present College-trained European and Eurasian element, recruited in the past, remains in the Service there is sure to be discontent, and it is considered that this discontent can be removed by promotion of selected officers to the Imperial Service. Also that when an officer is promoted to the administrative grade he should draw the same salary as an Imperial Service Officer, *viz.*, Rs. 1,500, Rs. 1,750 and Rs. 2,000 instead of Rs. 1,200, Rs. 1,400 and Rs. 1,600 in the 3rd, 2nd and 1st Classes of Superintending Engineers.

APPENDIX XII—*continued.*

(3) Number of Posts in each Grade, and provision, if any, made in the Cadre for Leave and Training.

Particulars.	1887.	26th June 1888.	September 1889.	November 1890.	1891.	1st April 1894.	1894 (later)	July 1897.	December 1898.	November 1899.	29th March 1904.	February 1905.	January 1906.	1911.	Present sanctioned Cadre.	Remarks.

(*a*) This Establishment is regulated by a money limit. The fluctuations since 1887 are shown below:—

—	1887.	1889.	1898–99.	1904.	1905.	1909.	1910.	Present limit.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Permanent Lower Subordinates	45,000	50,000	80,000	90,000	1,05,000	1,05,000	1,05,000	1,05,000
Temporary Lower Subordinates	34,000	34,000	34,000	10,000	45,000	95,000	1,05,000	1,05,000

(*b*) Prior to April 1887, Public Works in Upper Burma were carried out by Royal Engineer Officers attached to the Field Force, assisted by certain Officers and Subordinates of the Provincial Establishment from Lower Burma.

(*c*) With the abolition of the Field Force on the 1st April 1887, Upper Burma was constituted a separate Public Works charge under a Superintending Engineer and Secretary, with headquarters at Mandalay. This arrangement continued till Upper and Lower Burma were amalgamated on the 26th June 1888, and the combined charge placed under the control of one Chief Engineer and Secretary, with headquarters at Rangoon.

(*d*) Three Circles of Superintendence were found to be insufficient to control the large and scattered operations of the Province; a fourth Circle was therefore added and the Cadre revised.

(*e*) Cadre again increased consequent on the extension of Public Works operations and to a number of Engineer Officers being employed in the preparation of irrigation projects.

(*f*) Irrigation Circle formed.

(*g*) Increased in consequence of Military Works in Mandalay and Rangoon having been taken over by the Public Works Department.

(*h*) Re-adjusted by the Government of India when revising the Cadres of the several Lists of the Engineer Establishment for submission to the Secretary of State.

(*i*) Reduced to compensate for an increase in the number and cost of the Lower Subordinate Establishment, as men of the latter class were much needed.

(*j*) Owing to the large increase in the grant for Public Works, the figure was revised again.

(*k*) Consequent on the appointment of a Second Chief Engineer for the Province, the raising of the appointment of the Sanitary Engineer to a Superintending Engineership and the establishment of the Toungoo Circle of Superintendence the Cadre was increased as shown.

(*l*) Increased by one Engineer and one Upper Subordinate to provide an Officer and an Upper Subordinate for the Andamans.

(*m*) Increase in Upper Subordinates due to the Public Works Department taking over District and District Cess Fund Works.

* SPECIAL OFFICERS.

1. *Assistant Secretary.*—In 1903 sanction was obtained to the temporary appointment of a non-professional Assistant Secretary in the Public Works Department on Rs. 550. Subsequently made permanent, on Rs. 550—40—750, with effect from the 1st January 1904.

2. *Consulting Architect.*—In 1905 sanction was obtained to a special appointment of Superintending Engineer Architect for a period of 3 years, with effect from the 18th October, 1905, in order to expedite the architectural work of the Province. Subsequently extended to the 5th February 1909. In 1911 the appointment of a Consulting Architect to the Government of Burma, a non-pensionable appointment, was sanctioned to replace that of the Superintending Engineer Architect. The pay of this appointment is Rs. 800—50—1,000.

3. *Electrical Inspector.*—In 1905 sanction was also obtained to the appointment of an Electrical Inspector, on Rs. 600 per mensem, for a period of 3 years. This appointment has since been made permanent, non-pensionable on Rs. 600—40—1,000 with a local allowance of Rs. 100 per mensem.

It is considered that the proportion of Assistant Engineers to Executive Engineers should be increased so as to allow each division an Assistant Engineer and the more important divisions two or more Assistants. In Bengal, United Provinces, Bihar and Orissa, Assam and Central Provinces the average excess of Assistant over Executive Engineers is nearly 21 per cent. and if 20 per cent. was allowed for Burma it would not be excessive.

Provision for Leave.—At present fifteen absentees are allowed out of ninety-two officers on the cadre, *i.e.*, a percentage of sixteen nearly. This allowance is considered sufficient.

Provision for Training.—No provision is made. Engineer students of the Provincial Service undergoing a year's practical training do not reckon against the sanctioned cadre until promoted to Assistant Engineer. No provision is considered necessary unless the recruits to the Imperial Service are put on to a year's course of practical training after arrival in India.

(4) What Appointments outside the authorised Cadre are held temporarily or otherwise by Officers of the various Services.

Two such appointments are held at present, *viz.*, Mr. C. G. Barnett, Executive Engineer, at Delhi; and Mr. A. P. Morris, Assistant Engineer, as Headmaster, Government School of Engineering, Insein. Mr. C. J. Homer, Sub-Engineer, has been offered the post of

Assistant Engineer in the Provincial Service and if he accepts, his name will have to be included as he is on deputation under the Government of Bombay.

(5) Whether any addition is required to the present Cadre.

The present cadre is undoubtedly not sufficient for the duties to be carried out by the Department. The present numbers are not sufficient for privilege leave vacancies with the consequence that leave has frequently to be refused owing to there being no relieving officer available. Sanitary work is increasing very largely and special assistants are necessary. A division with one Executive Engineer and two Assistant Engineers is shortly to be formed for work on the frontier north of Myitkyina, and another division will probably have to be formed out of the present Mandalay and Meiktila Divisions where work has increased and present charges are reported to be very heavy.

The present cadre of Executive Engineers should therefore be increased by two, making it 44, and allowing 20 per cent. excess. For Assistant Engineers the cadre should be revised and increased to:—

Chief Engineers ...	...	...	2
Superintending Engineers		...	7
Executive Engineers	...	...	44
Assistant Engineers	...	...	53 (44+9).
		Total ...	106

instead of 92 as at present, *i.e.*, an increase of 14.

APPENDIX XIII.

[Referred to in paragraphs 71,493 (Mr. Rose's evidence); 72,160 (Mr. Dorman's evidence); 72,252 (Mr. Howley's evidence); and 72,588 (Mr. Harrison's evidence).]

Memorials submitted by Engineers of the Public Works Department to the Viceroy and to the Secretary of State for India.

Purport of Memorials submitted by Engineers of the Public Works Department in 1907-08.

To His Excellency the Right Honourable THE EARL OF MINTO, P.C., G.M.S.I., G.C.M.G., G.C.I.E., Viceroy and Governor-General of India.

The humble Petition of A.B. . . Engineer, Public Works Department, India.

Showeth,

1*stly*.—That in consequence of the fall in the purchasing value of gold, the pension which your petitioner can earn under the present rules will not enable him to live in England on retirement in that condition of life in which he was brought up, and in which men of his social standing live.

2*ndly*.—That your petitioner is unable to save any considerable sum from his pay owing to the high and constantly increasing cost of living in this country.

3*rdly*.—That the pension which your petitioner can earn compares very unfavourably with the sterling pensions now granted to officers of the other Scientific Services in India, men who are of the same social standing and who have had a similar expensive scientific education.

4*thly*.—That it appears from Article 641 of the Civil Service Regulations that retiring pensions are intended to be half the officer's average emoluments, but actually, owing to the maxima fixed, they are very much less than half, and could only be half if the officer had been stopped all promotion for many years.

5*thly*.—That at present there is no increase in pension for length of service beyond 25 years.

(*For officers appointed since* 1898.)—6*thly*.—That your petitioner is barred from earning the extra pension of Rs. 2,000 given to Chief Engineers or of Rs. 1,000 given to 2nd and 3rd class Superintending Engineers for 3 years' service as such, if those officers were appointed in or before 1898.

Your Petitioner therefore Prays—

That pensions may be granted according to the scale given below, and that they may be paid in England in sterling, at an exchange rate of 10 rupees to the pound sterling.

After 20 years' service, Rs. 4,000 in India or £400 in England.

After 25 years' service, Rs. 5,000 in India or £500 in England.

After 30 years' service, Rs. 6,000 in India or £600 in England.

Additional pension for 3 years' service as Superintending Engineer, Rs. 1,000 in India or £100 in England.

Additional pension for 5 years' service as Superintending Engineer or Chief Engineer combined, Rs. 2,000 in India or £200 in England.

Additional pension for 3 years' service as Chief Engineer, Rs. 2,500 in India or £250 in England.

Memorial of 1912.

To

The Most Hon'ble,
The Marquis of Crewe, K.G.,
His Majesty's Secretary of State for India.

The humble petition of.....Engineer, Public Works Department, India.

Showeth,

That your petitioner is an Engineer of..... year's service in the Imperial Branch of the Public Works Department, and that a few years ago His Excellency the Viceroy and Governor-General of India was approached with a humble petition for an increase in the amount of pension to which an officer in your petitioner's service becomes entitled on retirement, no final reply has been received.

That since this petition was presented, despite the improvement in salary graciously accorded by His Majesty's Government in 1908, the continued increase in cost of living in India, and the steady rise in prices in England, have caused your petitioner grave anxiety as to his future on retirement, and induce him to lay his case before your Lordship.

That the increased cost in living to which your petitioner has alluded, renders it extremely difficult for a married officer to afford his children an education suited to their position in life, and at the same time to save sufficient to enable him to supplement the pension to which he will be entitled on retirement. Your petitioner is convinced that your Lordship cannot consider such a state of affairs satisfactory.

That your petitioner moreover belongs to a highly trained scientific body of men, whose duties involve their spending a very considerable portion of their service under conditions deficient in the ordinary amenities of life, and in a climate that renders such work more than usually arduous. This service is rendered in a Department which is in a marked degree engaged in creating and developing new sources of revenue; and it is largely due to its efforts that the country owes its wealth and prosperity.

That the approximate expenditure on pensions in all services in 1884 and in 1911 compared with the amount of general revenues and of revenues earned by works constructed by the Public Works Department are set forth in the following table in lakhs of rupees:—

——	1884.	1911.	Increase.	
			Total.	Percentage.
General Revenues	6,706	12,240	5,534	83
Revenue from Public Works	977	3,013	2,036	300
Pension—all Services ...	78	162	84	108

That the increase of revenue from Public Works thus amounts to about 53 per cent. of the increase of general revenues and is about 35 times the total increase of pension charges for all services in the same period.

APPENDIX XIII—*continued.*

That while he gratefully acknowledges the benefits derived from the Reorganisation Scheme of 1908, your petitioner ventures to point out that, owing to the withdrawal of Exchange Compensation Allowance, those benefits were in the case of most officers considerably less than would appear at first sight, and compare very unfavourably with the concessions recently granted to the Provincial Branch of the Service, in that the net increase in pay granted to Provincial Engineers during their first 24 years' service has been 25 per cent. as against less than 15 per cent. given to Imperial Engineers for the same period.

That the increased salaries granted to the Imperial and Provincial Services in 1908 doubtless represented what Government after careful consideration at that time deemed absolutely necessary in the relative circumstances of the two services.

That the increase then granted to the Provincial Service has since been proved to be insufficient and your petitioner respectfully submits that this applies equally to the Imperial Service.

That whereas Your Lordship's Government has clearly defined pension as "deferred remuneration," bearing a definite proportion (from 1-3 to 1-2) to salary; yet owing to the fixed maximum, the sliding scale prescribed in Civil Service Regulations Article 641 is practically inoperative; and thus, while the improvement in salary introduced by the recent Reorganisation scheme brought a proportionate increase in pension to the Provincial Engineers, it brought no corresponding increase to the Imperial Engineer.

That while the average scientific training and professional qualifications now demanded are much higher than in the earlier years of the Department, the maximum pension which can ordinarly be earned by an officer in your petitioner's service, and payable in England, has owing to the fall in the exchange value of the rupee, fallen from £500 the figure at which it originally stood and is now fixed at £437-10-0.

That your petitioner believes that his service continues to receive in the matter of pensions and leave allowances the same consideration which is given to the services formerly styled "uncovenanted," and your petitioner submits that this is not in accordance with Secretary of State's despatch No. 18, dated 22nd March 1883, where Lord Kimberley laid down that "under the special rules regarding the pay pension and furlough which have now been provided for them (*i.e.*, Imperial Engineers) they will no longer come under the general Uncovenanted Service Rules, and a special chapter will have to be introduced into the Pension Code to meet their case. The term is therefore no longer applicable to them and should be dropped in India, as it will be here in all official notifications. Moreover as long ago as 1871, the Under Secretary of State for India (Mr. Grant Duff) speaking on the subject of Cooper Hill College and the Indian Engineering Service claimed in the House of Commons that Government had created a new profession on a level with the two great Indian Services—the Civil and the Military."

That your petitioner finds that so far from this equality being observed, the pensions at present granted to his Service compare most unfavourably with those granted to officers of the other scientific Indian Services, certain members of which are employed in your petitioner's own Department doing exactly the same work as your petitioner.

That your petitioner further respectfully submits that there appears to be no reason for this markedly adverse disparity in the pension rules of his own service, and other scientific services. Your petitioner in preparation for his service needed a preliminary education as expensive as that of the Royal Engineer or the Indian Medical Service Officer, and the Civil Engineer is in every way of at least equal importance to the country's life and prosperity. Further that while the pensions granted to those other services mentioned are not greater than the circumstances require, the pensions at present granted to Imperial Engineers are in comparison totally inadequate, and this disparity is emphasised by the want of a suitable Widows and Orphans Fund, the existence of which in the case of the other services renders improbable the chance of their families being left destitute.

That your petitioner when applying for, and accepting his appointment as an Assistant Engineer in the Public Works Department had not formed any correct estimate of the purchasing value of the rupee, and of the cost and conditions of life in India, and he anticipated he would be able to save a material portion of his salary and thus to supplement his pension, but the experience which your petitioner has already gained has proved to him the futility of this hope and has satisfied him that even allowing for the probably lower salary, which he might have drawn to commence with had he sought professional employment otherwise than under the Government of India, the conditions of such employment would in ordinary circumstances have offered him better prospects.

The climatic and other conditions of work in India render retirement at 55 years of age undoubtedly desirable, and at this age your petitioner cannot reasonably hope to obtain other employment with a view to supplementing his small pension.

A man who has worked in better climatic and other conditions is comparatively young at this age, and in ordinary circumstances does not find himself compelled to retire. The conditions of life in India involve the added risk of earlier complsory retirement on account of ill health, in a degree that does not obtain in more favourable surroundings and this risk becomes greater in the later years of service.

That in view of these facts, your petitioner has satisfied himself that the only course open to him in existing conditions, in order to improve his prospects, in the later years of his life, would be to retire at the earliest permissible date, *i.e.*, after 20 years' service, with a view to seeking other employment in which he would be able to continue to work for a longer period. This however constitutes at the best but an uncertain and unsatisfactory alternative to the prospects which your petitioner anticipated when he entered the service.

Your petitioner therefore humbly prays that your Lordship may be graciously pleased to give early and favourable consideration to this your petitioner's humble memorial.

Firstly, that pensions be granted to all Imperial Engineers according to the scale given below, and be paid in sterling:—

Ordinary Pensions.

On completing	20	years'	service	...	£350
,, ,,	21	,,	,,	...	380
,, ,,	22	,,	,,	...	410
,, ,,	23	,,	,,	...	440
,, ,,	24	,,	,,	...	470
,, ,,	25	,,	,,	...	500
,, ,,	26	,,	,,	...	540
,, ,,	27	,,	,,	...	580
,, ,,	28	,,	,,	...	620
,, ,,	29	,,	,,	...	660
,, ,,	30	,,	,,	...	700

Special Service Pensions.

Secondly, that as in accordance with the orders of the Government of India officers are appointed to the administrative grades entirely by merit; an additional special service pension of £40 per year of completed service be accorded to officers in those grades, subject to a maximum total pension of £940 per annum.

Thirdly, that the Leave allowances sanctioned for officers of the Indian Civil Service and Military Officers subject to the Civil Leave Rules may be extended to your petitioner's service.

And your Memorialist, as in duty bound will ever pray.

.....*Engineer,*
.....*Province.*
.....*Public Works Department.*

Memorial of 1913.

To

THE MOST HON'BLE,
THE MARQUIS OF CREWE, K.G.,
His Majesty's Secretary of State for India.

The humble petition of.....
.....Engineer, Public Works Department, India.

SHOWETH,

That your Petitioner has learned with dismay, from a letter issued by the Government of India, that

Government was unable to further consider the Memorials recently submitted, a large number of Imperial Engineers praying for a revised scale of pensions, until the report of the Royal Commission on the Public Service of India is received.

That your Lordship caused to be stated in the House of Commons on the 9th of October, 1912, that the question raised by the Memorialists was then under examination by the Government of India, and that pending the result of this examination no pronouncement could be made, and that the pensions come within the scope of the Public Services enquiry.

That the first of this reply seems to indicate that Your Lordship has not been kept fully informed of how the Government of India is dealing with this important case.

That the Royal Commission has been unable to deal with the Public Works and Railway Departments during their first tour in India.

That the number of Departments and Services, remaining to be dealt with during future tours, is so large that your Petitioner feels that a final decision on these Memorials may possibly be delayed to a date before which he will have been superannuated, and that therefore, under Article 4 of the Civil Service Regulations, which lays down that an officer's claim to pension is regulated by the rules in force when he retires, the practical effect in your Petitioner's case is a direct negative to the Memorials. Your Petitioner humbly submits that this is not consistent with the tenor of Your Lordship's reply in the House of Commons on the 9th of October, 1912.

Your Petitioner therefore humbly prays that your Lordship may be graciously pleased to give immediate consideration to your Petitioner's humble Memorial.

Firstly, that the pensions be granted to all Imperial Engineers according to the scale given below, and be paid in sterling:—

Ordinary Pensions.

On completing	20	years'	service	...	£350
,,	,,	21	,,	,,	...	380
,,	,,	22	,,	,,	...	410
,,	,,	23	,,	,,	...	440
,,	,,	24	,,	,,	...	470
On completing	25	years'	service	...	£500
,,	,,	26	,,	,,	...	540
,,	,,	27	,,	,,	...	580
,,	,,	28	,,	,,	...	620
,,	,,	29	,,	,,	...	660
,,	,,	30	,,	,,	...	700

Special Pensions.

Secondly, that as in accordance with the orders of the Government of India officers are appointed to the administrative grades entirely by merit; an additional special service pension of £40 per year of completed service be accorded to officers in those grades, subject to a maximum total pension of £940 per annum.

Leave Allowances.

Thirdly, that the Leave allowances sanctioned for officers of the Indian Civil Service and Military Officers subject to the Civil Leave Rules may be extended to your Petitioner's service.

And your Memorialist, as in duty bound, will ever pray.

.....*Engineer,*
.....*Province.*
Public Works Department.

Letter No. 942-*E, dated Simla, the* 30*th August* 1912, From Mr. G. H. LEMAISTRE, DEPUTY SECRETARY TO THE GOVERNMENT OF INDIA, P.W.D. To THE SECRETARY, TO THE GOVERNMENT OF THE PUNJAB, P.W.D.

I am directed to refer to the correspondence ending with your letter No. 0658-E. I., dated the 6th July 1911, forwarding memorials submitted by certain Engineer officers of the Public Works Department in which they pray for the grant of enhanced rates of pensions and for the payment of pensions in sterling.

2. In reply, I am to say that His Majesty's Government having appointed a Royal Commission on the Public Services in India and pension being one of the subjects of reference to the Commission, the Government of India are unable further to consider the matter until the report of the Commission is received. I am to request that the memorialists may be informed accordingly.

APPENDIX XIV.

Memorandum prepared by the Government of Madras relating to the Public Works Department.

IMPERIAL ENGINEER SERVICE.

(i) *Present regulations as to recruitment.*

This service is recruited from selected candidates appointed in England by the Secretary of State for India in Council. The selection of candidates in England is made on the advice of a Selection Committee including at least one eminent representative of the Engineering profession. Natives of India who are British subjects are eligible for appointment to this service and are selected to the extent of 10 *per cent.* of the total number of Assistant Engineers thus recruited, if otherwise duly qualified, viz., by age, examination, etc.—*vide* paragraphs 1 and 5 of the Regulations as to appointment of Assistant Engineers to the Imperial Service.†

Present regulations as to training and probation.

Candidates who have passed through a college course and obtained one of the degrees prescribed should have had at least one year's practical experience of Civil Engineering under a qualified Civil Engineer at the time when they appear before the Selection Committee. Those who have taken no college course should have had a full three years of such practical experience. In the event of any candidate being selected who has not, in the opinion of the Selection Committee, had sufficient practical experience, he may be required to undergo after arrival in India a year's probation in charge of works and his final appointment is dependent upon the result of such probation—*vide* paragraph 7 of the Regulations as to appointment of Assistant Engineers to the Imperial Service.†

† *Vide* Appendix XIX.

Whether the regulations are satisfactory.

His Excellency in Council considers the present method of selection to be satisfactory, but it is suggested that paragraph 5 of the present Regulations as to the appointment of Assistant Engineers should be modified so as to provide that, instead of Natives of India being selected in England to the extent of 10 *per cent.* of the total number of Assistant Engineers recruited, Provincial Engineers should be appointed annually to the Imperial Service to the extent of 10 *per cent.* of the total recruitment in England, the appointment of Natives of India by the Secretary of State being made in exceptional cases only.

PROVINCIAL SERVICE.

Present Regulations as to recruitment.

This service is recruited—

(1) from the students of the College of Engineering, Madras, being Natives of India as defined in the Statute 33 Vict., Chapter 3, Section 6, at the rate of one every year, and

(2) from the Upper Subordinates of the department at the rate of one in alternate years.

The recruitment from the college is made annually by the Chief Engineer, Public Works Department, in consultation with the Principal of the College, and the appointment is conferred on the student, either Civil or Mechanical Engineer, judged most suitable on the results of the examinations and the promise shown by him and his general behaviour during the college course.

APPENDIX XIV—*continued.*

Present Regulations as to training and probation.

Students recruited from the College of Engineering, Madras, are appointed by the Local Government as apprentices on Rs. 100 a month. They are promoted to Rs. 150 after six month's period, provided they have given satisfaction during that period, and to Assistant Engineer on Rs. 250, Provincial Service, after a year, provided they are then considered to be in all respects competent to hold charge of a sub-division. In the case of an apprentice who at the end of the first year's service is not considered qualified for confirmation in the department, the Local Government may decide whether he is to be given a further trial or be removed from the department, and ordinarily one who is not within three years from date of appointment as apprentice Engineer recommended for promotion to Assistant Engineer will be so removed.

Whether the present regulations are satisfactory.

No change in the present method of selection from the college is considered to be necessary.

(ii) *The rates of pay and allowances in force in 1890 and 1900 and at the present time.*

IMPERIAL SERVICE.

—	In 1890.	In 1900.	At the present time.
	Rs.	Rs.	Rs.
Chief Engineer—			
First class ...	2,500	2,500	2,750
Second class ...	2,000	2,000	2,500
Third class ...	1,800	1,800	Abolished.
Superintending Engineers—			
First class ...	1,600	1,600	2,000
Second class ...	1,350	1,350	1,750
Third class ...	1,100	1,100	1,500
Executive Engineers—			
First grade ...	950	1,000	Rs. 800—50—1,250, the increment of Rs. 50 being given annually for approved service.
Second grade ...	800	850	
Third grade ...	700	700	
Fourth grade ...	600	Abolished.	
Assistant Engineers—			
First grade ...	500	550	Rs. 380—40—700—50—750, the increment of Rs. 40 being given annually for approved service until Rs. 70 is reached, the next increment being Rs. 50 a month.
Second grade ...	*350	450	
Third grade ...	250	350	

* Assistant Engineers, second grade, after three years' service in the grade received Rs. 400 a month if recommended.

PROVINCIAL SERVICE.

In 1890.		In 1900.	At the present time.
		Rs.	Rs.
Chief Engineers—	There were not two separate services — Imperial and Provincial in 1890. The Engineers appointed in England and in India were borne on the same list and were drawing the same rates of pay which are shown under Imperial service for 1890.		
First class ...		2,500	2,750
Second class		2,000	2,500
Third class...		1,800	Abolished
Superintending Engineers—			
First class ...		1,050	1,600
Second class		900	4,400
Third class...		750	1,200
Executive Engineers—			
First grade		650	Rs. 535–35–850,† the increment of Rs. 35 a month being granted annually for approved service.
Second grade		550	
Third grade		475	
Fourth grade		Abolished.	
Assistant Engineers—			
First grade		400	Rs. 250–25–475, the increment of Rs. 25 a month being granted annually for approved service.
Second grade		350	
Third grade		250	

† A special increment of Rs. 50 may be granted by the Local Government to a deserving Executive Engineer who, after completion of five years' service on the maximum pay of Rs. 850, is not promoted to administrative rank.

Allowances.

(1) From the 1st August, 1905, the two Chief Engineers who are also Secretary and Joint Secretary to Government Public Works Department, draw a local allowance of Rs. 250 a month, each.

(2) From the 19th June, 1899, the two Executive Engineers who are Under Secretaries to Government draw a local allowance of Rs. 100 a month, each.

(3) The officers of both the services draw travelling allowances in accordance with the rules in the Civil Service Regulations.

Whether the present rates of pay and allowances are satisfactory.

Rates of pay.—It is considered that no alteration in the rates of pay of the Engineer services is necessary.

Allowances.—The rates of travelling allowances admissible to Gazetted officers under present rules on transfer from one station to another are altogether inadequate and the following scale of rates is proposed:—

Salary of officer after transfer.	Railway fares for himself and family.	Number of servants whose fares will be paid by Government.	Weight of luggage in manuds for the conveyance of which by goods train or cargo steamer Government will pay.	Number of horses for the conveyance of which Government will pay.
I. Officers on less than Rs. 500.	4	*3	†15	One horse.
II. Officers on Rs. 500 and less than Rs. 1,500.			†30	Two horses.
III. Officers on Rs. 1,500 and above.			†40	

* With one syce and one grass-cutter for each horse if necessary. A servant making a journey ten days on either side of the date of arrival of the officer at his new station may be included in the maximum number of servants for whom fares are recoverable.

† Officers who maintain tents may draw in addition to the cost of the carriage of ordinary luggage, the cost of carriage of tents within the limits already fixed for the purpose of article 1000, Civil Service Regulations.

This scale was recommended to the Government of India in July 1912.

(iii) *The number of posts in each grade and the provision, if any, made in the cadre for leave and training.*

Number of posts in each grade.

	Ultimate.		Provisional until the Provincial Service cadre reaches its maximum strength.	
Chief Engineer—				
First class	1	2	1	2
Second class	1		1	
Superintending Engineer—				
First class	2	7	2	7
Second class	2		2	
Third class	3		3	
Imperial Service—				
Executive Engineers ...	35		41	
Assistant Engineers ...	19		21	
Provincial Service—				
Executive Engineers ...	8		4	
Assistant Engineers ...	22		18	
	93		93	

The provision made in the *cadre* for leave is 20 *per cent.* of the total strength.

No provision is made in the *cadre* for training.

(iv) *Appointments outside the authorised cadre held temporarily or otherwise by officers of the Imperial or Provincial Engineer Service.*

One of the two posts of Temporary Deputy Sanitary Engineers is held temporarily by Mr. E. W. Lace, an Assistant Engineer of the Imperial Service.

(v) *Whether any addition is required to the present cadre.*

It will be seen from item (iii) above that the present sanctioned number of the Engineer Establishment is—

Chief Engineers	2
Superintending Engineers	7
Executive Engineers	45
Assistant Engineers	39
Total ...	93

In June 1913, the Government of India were asked to obtain the sanction of the Secretary of State to an additional appointment of Superintending Engineer, second class, to provide for an additional circle of superintendence which was created, in the first instance as a temporary measure, for two years and which has been found to be permanently required. The total number of Superintending Engineers will then be raised from 7 to 8.

The strength of the Engineer *cadre* in this Presidency was last fixed by the Government of India in 1908 at 92. This strength was fixed on a basis of eight administrative posts, thirty-three divisional and two special and extra charges. In 1909, the Government of India were requested to increase the *cadre* from 92 to 97 on a basis of nine administrative posts, thirty-three divisional and three special and extra charges. In 1911, the number of administrative posts alone was increased from eight to nine by the inclusion of the post of Sanitary Engineer in the Imperial Engineer *cadre* in the rank of Superintending Engineer, third class. Since the request made in 1909, the number of administrative and divisional posts have been increased, and the Government of India have recently been requested to fix the strength of the Engineer *cadre* on a basis of ten administrative posts, thirty-three divisional and six special and extra charges, or a total of forty-nine charges against forty-three in 1908. It is not known what the additions to the *cadre* will be on account of the increase of six in the number of charges, as the data on which the Government of India calculate the number is not known to this Government.

APPENDIX No. XV.

(Referred to in paragraph 72,602 — Mr. C. S. C. Harrison's evidence.)

Transfer expenses of Mr. Henry J. M. Cousens, Assistant Engineer, Acting Executive Engineer.

(i) *Dhárwàr to Bombay, December* 1912—10*th December* 1912.

(Equal to about 441 miles.)

For self and wife, no family. } +1 servant.

Item.	Actual expenses.			Travelling Allowance received.		
	Rs.	a.	p.	Rs.	a.	p.
Bullock carts for kit to Dhárwár station including coolies (for all kit)—						
10 carts	9	8	0			
Packing expenses — carpenter grass, gunny bags, coolies, &c.	8	0	0			
One wagon kit by goods at wagon rates to Bombay as per Railway receipt Note 15—06180, dated 3rd December 1912.	88	4	0	No allowance given for 20 maunds camp kit and cycles as transfer was to Bombay Secretariat.		
Delivery charges for do. by Cox & Co. in Bombay.	19	0	0			
Delivery charges for passenger train luggage.	3	0	0			
Conveyance by rail from Dhárwár to Bombay—						
Two 1st Class fares	81	6	0			
One 3rd Class fare (Mail) ..	9	0	0			
Rail charge for 1 motor cycle. } As per general Receipt Note No 12 of	12	0	0			
Rail charge for 1 ordinary cycle. } 10th December 1912.	3	0	0			
Passenger train excess luggage (as per General Receipt Note No. 11, dated 10th December 1912).	59	4	0			
Retransfer of kit from station to house.	7	0	0			
Total ...	299	6	0			
Received double 1st Class fare ...		—		81	6	0
1½ miles to Dhárwár Station from Post Office.		—		0	8	0
				81	14	0

The above does not include the usual extra expenses due to transfer such as:—

(1) Loss in sale of furniture at necessarily cheap rates.
(2) New club entrance fees.
(3) Conveyance to and from stations.
(4) Extra cost of meals on trains, etc.
(5) Breakages.

In some cases the transfer expenses would have been higher still, for example—

(1) A motor car might have had to be conveyed and no allowance would have been given because the transfer was to the Secretariat in Bombay.
(2) More servants might have been kept on.
(3) More kit might have been conveyed. In the above transfer the amount of kit could not have been considered large by any means, etc.

(ii) *Sátára to Dhárwár,* 10*th October* 1910

For self, wife and 3 servants. } Sátára to Dhárwár = 244 miles.

Item.	Actual expenses.			Amount claimed in Travelling Allowance bill, as per rules.		
	Rs.	a.	p.	Rs.	a.	p.
Sátára to Sátára Station—						
10 carts, including toll, &c., and filling wagon.	15	0	0			
Tonga to Station—10 miles ...	2	8	0			
(10 miles @ 8 annas a mile)...		—		5	0	0
Packing expenses	7	0	0			
Train fare to Dhárwár—						
Two 1st Class	45	12	0	45	12	0
Three 3rd Class...	8	7	0			
Goods—						
81 maunds as per Receipt No. 14 of 7th January 1910.	44	8	0			
One horse as per Receipt No. 4 of 7th October 1910.	30	8	0	30	8	0
Two cycles (1 motor cycle as per Receipt No. 10 of 10th October 1910).	4	0	0			
(One cycle)		—		2	0	0
Excess luggage in mail train— Mds. srs. Weight 12 31 Free 3 15						
Weight charged 9 16 = Rs. 19 as per Receipt No. 10 of 10th October 1910.	19	0	0			
Camp kit per passenger train 7½ maunds.		—		15	2	6
Do. goods train 12½ ,,		—		6	13	10
20						
Cart hires—						
Lhárwár to bungalow—9 carts at 9 annas each.	5	1	0			
(2 miles from Station at Dhárwár to Post Office at 8 annas per mile).		—		1	0	0
Dumney hire in Dhárwár on arrival—Station to house.	0	8	0			
Cooly hires on stations ...	1	0	0			
Total ...	183	4	0	106	4	4

The above does not include the usual extra expenses due to transfer such as:—

(1) Loss in sale of furniture at necessarily cheap rates.
(2) New club entrance fees (otherwise unnecessary).
(3) Extra cost of meals on trains.
(4) Breakages, etc.

The amount of kit conveyed in the above transfer was very small and included very little furniture indeed.

APPENDIX XV—*continued.*

(iii) *Dhárwár to Hubli, January* 1912, *and Hubli to Dhárwár, March* 1912.

Mileage each way—12.

Item.	Actual expenses.	Amount claimed in Travelling Allowances and allowable as per rules.
	Rs. a. p.	Rs. a. p.
14 bullock carts kit 12 miles at 2 annas per mile each	21 0 0	
Packing expenses, grass, &c., approximate	5 0 0	
Train fare for wife (servants and self by road)	1 4 0	
No conveyance expenses from and to stations as dumney hired in Dhárwár was kept on at Hubli.		
Station coolies	0 4 0	
Total	27 8 0	
Amount admissible as per rules—daily allowance for one day, Rs. 4....	—	4 0 0
Total		4 0 0

The above does not include the usual extra expenses due to transfer such as in this case—
(1) New club entrance fee (otherwise unnecessary).
(2) Breakages, etc.

APPENDIX XVI.

Memorandum prepared by the Government of Bombay relating to the Public Works Department.

1. The present regulations as to recruitment, training and probation, and whether these regulations are satisfactory.

The Engineer Establishment is recruited from the following sources:—

For the Imperial Service—

(1) Selected candidates appointed in England by the Secretary of State.

(1*a*) Temporary Engineers who have been sent out by the Secretary of State on covenant for a few years.

(2) Officers of the Corps of Royal Engineers on the Indian Establishment.

For the Provincial Service—

(3) Passed students of the Indian Civil Engineering Colleges, and,

(4) Promoted Upper Subordinates.

The candidates of the first-named class were, up till 1907, selected from Coopers Hill College. They are now appointed by the Secretary of State, with the advice of a Committee of Selection, from amongst applicants in possession of certain specified University degrees or other approximately equivalent qualifications. Ten per cent. of the appointments thus made are reserved for duly qualified natives of India, but only one such appointment has as yet been made on the Bombay Establishment. Since Coopers Hill was abolished 4 Indians have been added to Imperial Establishment. Three of them were from amongst those finishing off at Coopers Hill after outsiders were first appointed, *viz.*, Messrs. M. A. Mirza, D. R. Sawhney and S. B. Tyabji, *e.g.*, in 1905, 1906 and 1907. Mr. T. S. Mirchandani came in 1911. A candidate who has not had sufficient practical experience may be required to undergo, after arrival in India, a year's probation in charge of works, his final appointment being made dependent upon the result of such probation. A report is to be submitted to the Government of India on such officers at the end of the year. A copy of the rules is appended.* The usual rate of recruitment from England for Bombay is two per year, though this rate has been increased at times to meet heavy pressure of work. Two Royal Engineer officers were appointed in 1909. Appointments from that Corps are seldom made now-a-days. The rate of recruitment from the Poona College of Engineering is one candidate per year and, from the Upper Subordinate class one every alternate year, or 1½ per year on an average.

2. Up to 1891, two appointments, one as Assistant Engineer, and the other as Apprentice Engineer were allowed for this Presidency from the Poona College. In 1891 the Government of India at the request of the Government of Bombay agreed to take the Apprentice on to their list, and since then only one appointment is made from the Poona College. Three appointments were made by the Government of India in 1892, 1893 and 1894. In 1895 this Government retained the second man.

3. In 1892, the Provincial Engineer service was established and it took effect from the year 1896. Under the rules governing this service, the appointment of one man in each year from the Poona College has been continued but on somewhat less favourable terms, the student eligible being appointed as an Apprentice Engineer in the first instance and promoted to be Assistant Engineer, 3rd Grade, after one year of approved service. This is a year of probation and of training in one, while the Imperial Engineers usually have their year's training at home. Under the previous arrangement, the men appointed as Assistant and Apprentice Engineers were required to have passed the L.C.E. Examination of the Bombay University in the First Class and the first two men were taken; but the present rule is to select the most suitable man from among graduates in the First Class as Apprentice Engineer. The Government order* is as under:—

"Under the guarantee at present in force, *vide* Government Notifications noted in the footnote,† the candidate who passes first in the First Class of the Bombay University Examination for the degree of L.C.E. is appointed to the permanent Engineer Establishment of the Public Works Department. But, while educational attainments are necessary, there are other factors such as physique, antecedents, character, manners, etc., which must be taken into consideration in making an appointment of Assistant Engineer. Government, therefore, consider that the

* Appendix XIX.

† Government Notification No. 10, dated 18th, February, 1885.
Government Notification No. 36, dated 20th May, 1891.
Government Notification No. 42, dated 2nd August, 1892.
Government Notification No. 10, dated 31st January, 1893.

existing terms of the guarantee require modification, and they are pleased to direct that in future the guaranteed appointment is to be conferred not necessarily on the candidate who stands first in the order of examination but on the one, from amongst the candidates, in the First Class, who appears best fitted generally for a post in Government service."

Men promoted from the Upper Subordinate class are of course appointed as Assistant Engineers at once.

4. The recruits from England and those from the Poona College are borne on the same list and their positions are determined according to the dates on which they reach the rank of Assistant Engineer. The appointments of the former take effect from 1st October, while the latter enter between February and March. The order of seniority, therefore, of these officers is fixed as follows:—

Recruits from England of say, October 1912, then

Poona College Recruit of March 1912 who undergoes apprentice work until March 1913, which corresponds to the year of practical work required of Imperial Engineers before being appointed, then

Recruit from Upper Subordinate class if appointed later than March 1913, and then

Recruit from England in 1913.

5. The following orders regarding a practical course of training for the recruits from the College of Engineering (Poona) have been issued by the Government of Bombay:—"After a passed student is appointed Apprentice Engineer he must be placed on some large Engineering work to undergo a year's course of practical work under an Executive Engineer. During the period of apprenticeship he will be required to maintain a note-book fully illustrated with neat sketches showing all details connected with the work, including manufacture of materials. He should record, from actual measurement, what quantities of fuel and limestone or kankar are required for 100 cubic feet of lime, and when these vary, try to explain the cause, what quantity of different classes of work a bricklayer or stone-mason can lay in a day, and what assistance he requires, what quantities of lime, sand or surkhi and stone or brick are required per 100 cubic feet of masonry, etc., etc. He should also record the difficulties encountered and how they have been overcome. The note-book should be submitted every month to the Principal, College of Engineering, Poona, through the Executive Engineer and the Superintending Engineer who will pass it on without delay, making such remarks as may be called for. It should be returned by the Principal direct to the Apprentice, his remarks being communicated to the Superintending Engineer. If at any time during the period of apprenticeship, it appears to the Principal that the Apprentice is not receiving sufficient attention or not obtaining sufficiently varied experience he should draw the attention of the Superintending Engineer to the fact and make suggestions. Towards the end of the 12 months the Executive Engineer should report to the Superintending Engineer through the Principal his general opinion on the manner in which the Apprentice Engineer had used his opportunities of acquiring practical knowledge. When passing on the report, the Principal in consideration of the manner in which the note-book has been maintained should report to the Superintending Engineer whether the Apprentice had done creditably. The Superintending Engineer should submit the reports to Government with his own observations."

6. The course for the final examination in Engineering in the Poona College has been made more comprehensive, and the old degree of Licentiate of Civil Engineering has been converted into that of Batchelor of Engineering.

7. The present regulations as to recruitment, training and probation are considered satisfactory, except that the recruitment should be more regular, and increased as soon as the expectation of an increased cadre is justified.

2. The rates of pay and allowances in force in 1890 and 1900 and at the present time, and whether the present rates of pay and allowances are satisfactory.

Grades.	Rates of pay in 1890.	Rates of pay in 1900.		Present rates of pay (*viz.*, in April 1913).	
		Imperial.	Provincial.	Imperial.	Provincial.
	Rs.	Rs.	Rs.	Rs.	Rs.

Do. 3rd Grade	250	350 Old 250	250	700—50—750	
Apprentice	100	—	‡ 150 / 100	—	‡ 150 / 100

* Two periodic increments, each to the extent of Rs. 50 per mensem, were granted to Executive Engineers, 1st Grade, under certain circumstances. A minimum of 4 years' approved service in the grade was necessary to qualify for the first increment and a further minimum period of 4 years' approved service for the second.

† Assistant Engineers 2nd Grade, after 3 years' service in the grade received Rs. 50 per mensem more if recommended.

‡ Apprentice Engineers receive Rs. 150 a month after 6 months' satisfactory service.

§ Plus Rs. 250 per mensem for holding the posts of Secretary and Joint Secretary to Government.

‖ A special increment of Rs. 50 per mensem may be granted by the Local Government to a deserving Executive Engineer who after completion of 5 years' service on the maximum pay of Rs. 850 is not promoted to administrative rank.

The Bombay Government have recently represented* that the pay of Public Works Department officers below administrative rank (stationed in Bombay) is insufficient, and they have strongly recommended a presidency allowance of Rs. 250 per mensem for Executive Engineers and of Rs. 150 per mensem for Assistant Engineers.

* *Vide* Annexure E.

APPENDIX XVI—*continued.*

3. The number of posts in each grade and the provision, if any, made in the cadre for leave and training.

The number of posts in each grade, etc., is as under:—

	Number of posts as per sanctioned cadre.
Chief Engineer, 1st Class	1
Chief Engineer, 2nd Class	2
Superintending Engineer, 1st Class ...	2
Superintending Engineer, 2nd Class...	2
Superintending Engineer, 3rd Class ...	2
Executive Engineers	49
Assistant Engineers	42
Total ...	100
Temporary Superintending Engineer on Rs. 1,500 per mensem for 2 years	1
Total ...	101

The cadre includes provision for absentees on leave at 17 per cent. on total strength. The cadre does not include any provision for training.

4. What appointments outside the authorized cadre are held, temporarily or otherwise, by officers of the various services?

The following appointments outside the authorized cadre are held by officers engaged on short agreements, etc.:—

(1) Consulting Architect to Government.	(Pay Rs. 1,500–50–1,750.)
(2) Assistant to the Consulting Architect to Government.	(Pay Rs. 500–40–660.)
(3) Assistant to the Consulting Architect to Government.	(Pay Rs. 340–40–500.)
(4) Electrical Engineer	(Pay Rs. 1,000–50–1,200.)
(5) Electrical Inspector	(Pay Rs. 650–50–750.)
(6) Mechanical Engineer to Government.	(Pay Rs. 1,100 per mensem for the first three years; Rs. 1,150 per mensem for the fourth year. Thereafter it is to rise by annual increments of Rs. 50 per mensem to Rs. 1,750 per mensem.)
(7) Temporary Engineer for Boring Work.	(Pay Rs. 700 per mensem for the first year and Rs. 800 per mensem for the next 4 years.)
(8) Analyst to the Sanitary Board.	(Pay Rs. 500–20–600.)

2. In addition to the above-mentioned officers there are 20 temporary Engineers under the yearly sanction on the rates of pay shown below:—

Number of Officers.	Rate of pay per mensem Rs.
2	1,200
2	800
1	750
1	620
2	600
1	550
2	500
3	450
2	400
2	300
2	250
Total ... 20	

5. Whether any addition is required to the present cadre.

An increased cadre (100 to be raised to 132 officers) was recommended in letter No. E-4418* of 23rd April 1913. But on the Government of India* pointing out that junior officers may not exceed a certain proportion of the whole, it is necessary to reconsider the request. A modified increase may be asked for, and a request may be made that the normal recruitment be increased so as avoid spasmodic† increases such as have occurred in the last ten years.

* *Vide* Annexures C and D.
† *Vide* Annexure A.

ANNEXURE A.

* The cadre was increased from 80 to 81 as the appointment of the Sanitary Engineer to Government was transferred from the General to the Public Works Department.

† The cadre (which was reduced from 81 to 80 in 1901 (was increased from 80 to 82 consequent upon the appointments of the second Secretary and the second Under Secretary to Government, Public Works Department.

‡ The cadre was increased from 82 to 101 to provide for additional executive charges.

§ Of these, two were from covenanted temporary Engineers.

‖ The cadre has been fixed at 100 consequent upon the Reorganization of the Engineer Establishment in 1908.

¶ Of these one was from covenanted temporary Engineers.

** Two transferred from Military Works Services.

ANNEXURE B.

INDIAN PUBLIC WORKS DEPARTMENT AND INDIAN STATE RAILWAYS.

Regulations as to Appointment of Assistant Engineers, 1913. (*Vide* Appendix XIX.)

ANNEXURE C.

No. E. 4418 of 1913.

Public Works Department.

Bombay Castle, 23rd April 1913.

From H. V. R. KEMBALL, ESQ., Secretary to the Government of Bombay; to the SECRETARY to the GOVERNMENT of INDIA, Public Works Department.

Establishments.

SIR,

I am directed to address the Government of India with regard to the urgent necessity for strengthening the staff of the Public Works Department in the Bombay Presidency.

2. The sanctioned cadre of the department is at present fixed at 100 officers. This strength is even now insufficient for the regular work of the department and 105 officers are actually employed. The large construction works in progress necessitate a considerable temporary increase of staff and this is

being met by the employment of Temporary Engineers. Twenty-two Temporary Engineers are employed at present, of whom ten noted in the foot-note* are employed on special work and are not taken into consideration in the calculations of establishment in this letter. The remaining twelve Temporary Engineers are employed on the regular work of the department and are being added to as capable men offer.

3. But considerable difficulty is experienced in obtaining a sufficient number of capable Temporary Engineers. The completion of the large irrigation works now under construction and of those which will most probably be taken in hand and completed within the next twenty-five years will necessitate a considerable increase in the permanent strength of the department for their maintenance. There are strong objections to appointing the extra men in a block when required because the block will cause hardship when the men are ripe for executive charges and for promotion to administrative appointments, while, if the men are appointed gradually, they will be most useful for the construction work. It is, therefore, proposed to determine now the permanent strength that will be required when these works are opened and to regulate at once the annual recruitment so as to provide this strength.

4. There are at present 38 sanctioned permanent executive charges including the two appointments of Under Secretary to Government. From these must be deducted the two additional charges—Provincial or Imperial—which have not been formed, the Survey and Construction District which has been temporarily closed, and one of the Jamrao Canal Districts since the amalgamation of the two districts into one may now be considered permanent. The new Kolaba District sanctioned for two years as an experimental measure must, however, be considered permanent. It may thus be taken that there are 35 permanent Executive charges, of which 20 are Provincial and 15 Imperial. There are also five temporary Executive charges, *viz.*, the Pravara Canals, the Poona Drainage and Water Supply District, and the Lake Whiting, Lonand, and Malsiras Districts of the Nira Canals. These are all construction districts and will be closed when the works are completed.

5. Executive charges will, however, have to be formed for the maintenance of the large irrigation works now under construction or contemplated in the near future. The Godavari Canal construction district has been closed and amalgamated with the Nasik and Ahmednagar Irrigation District. When the Godavari Canal is opened for irrigation, this combined district will be too large for one charge and it is proposed to form a new district to be called the Ahmednagar Irrigation District, which will include the irrigation in the Ahmednagar District and the irrigation under the Pravara Canal when opened. The Nira Canal must be formed into a separate charge for maintenance. It is presumed further that the construction of the Sukkur Barrage and Indus Left Bank Canal, and the Gokak Canals will be completed within 22 years from the present time. The former, with more than 500,000 acres of new irrigation, will require two additional Executive charges and the latter one Executive charge for maintenance. Thus within the next 22 years five new Imperial Executive charges will be required. The rapid extension of Sanitary works in this Presidency makes *it imperative that two new* Executive charges, Northern and Southern, *should* be formed at once, and the Government of India is being spearately addressed on this matter. I am to assume that these two additional charges will be formed at an early date, and that the number of Provincial Executive charges will thus be increased to 22.

6. I am to attach hereto a statement† prepared to show the Engineer staff which will, in the opinion of Government, be required when the Executive charges detailed in the last paragraph are sanctioned, in comparison with the staff as sanctioned, and as it stands at the present time. From this statement it will be seen that the strength when those Executive charges are sanctioned, should be 113 or, adding 17 per cent. for absentees, 132 in all.

7. I am to observe that, pending the completion of the great irrigation works, the establishment during construction must of course be much in excess of the requirements above figured out. The comparison will be somewhat as follows:—

Construction district dealt with.	Executive Engineers.	Assistant Engineers.	Instead of permanent Maintenance district dealt with	Executive Engineers.	Assistant Engineers.
Godavari and Pravara Canals.	1	8	Ahmednagar Irrigation.	1	2
Nira Right Bank Canals 3 districts.	3	6	Nira Canals ...	1	3
Gokak Canal 2 districts.	2	5	Gokak Canal ...	1	1
Rohri Project 4 districts at least.	4	8	2 Districts	2	6
Total	10	27	Total	5	12

The difference will have to be made up by appointing temporary men to the extent required. The strength required, taking into consideration works under construction, will always be in excess of the figure given in the end of the last paragraph, for the Godavari Canal will not be completed for two years from now; the Pravara Canals will take five years to complete; the Nira Canals will require 12 years for completion; the Gokak Canal can be begun in 1915 and will then be completed in 1925; and the Sukkur Barrage and Rohri Canal, if begun in 1915, will probably not be finished before 1930.

8. The above projects are those which have been fully elaborated and submitted to the Government of India for approval. There are several others which will no doubt follow these, but the purpose of the present letter is to deal only with schemes which will in all human probability be brought into existence within the next 10 or 15 years. The proposals may be found later on to be insufficient for the needs of the department, but they will not be in excess of requirements.

9. Investigation shows that the average term of an Engineer's service in the Bombay Public Works Department is 22 years. Taking figures for the last 20 years in the Bombay list, it has been found that 62 men retired or resigned giving an average of 3·1 men per annum with an average service of 25½ years, and 23 men died, giving an average of 1·1 men per annum with an average service of 11·3 years. The average cadre for the period was 89·1 men so that for a cadre of 132 men the loss would be about 6·3 or say 6 men *per annum. This is, therefore, the rate at which recruitment may take place, and in 22 years the cadre will be complete. It is assumed* that the recruitment will be in the proportion of 4 from home, and 10 per cent. of Indians as at present, and two from this country instead of 1½ as at present. I am, therefore, to ask that the Secretary of State may be moved to increase the annual recruitment from home to four officers.

10. I am now to explain the necessity for the additional Superintending Engineer provided in the statement for Irrigation in Deccan. Now that the new Kolaba District has been sanctioned, the Northern Division includes seven Executive Districts, the annual expenditure of which may be taken at Rs. 24 lakhs excluding local fund works. The Southern Division includes seven districts with an expenditure of about Rs. 21 lakhs excluding local fund works. The Central Division includes eight permanent Executive Districts with an annual expenditure of about Rs. 25 lakhs excluding local funds. In addition, this Division has now for some years included two construction districts, *viz.*, the Godavari

* Mr. Wittet, Consulting Architect; Mr. Mercer, Assistant Architect; Mr. Phipps, Assistant Architect; Mr. Stuart-Menteth, Electrical Engineer; Mr. Wilson, Electric Inspector; Mr. Thiselton Dyer, Mechanical Engineer; Mr. Mandy, Sanitary Executive Engineer; Mr. Hubbell, Boring Engineer; Mr. Kirloskar Under Electrical Engineer; Mr. Dooris, Boring Engineer.

† Printed as an accompaniment.

APPENDIX XVI—*continued.*

Canals just closed, and the Pravara Canals. These ten districts have formed a very heavy charge for one Superintending Engineer.

11. When the construction of the enlarged Nira Canal was sanctioned, it was not considered advisable to entrust the three new construction districts to the Superintending Engineer, Southern Division, though this would appear to be numerically a more suitable division of labour. Though the Right Bank Canal lies partly in the Southern Division, Lake Whiting, the Left Bank Canal and the greater part of the Right Bank Canal are in the Central Division, and it was considered advisable to place the whole canal under one Superintending Engineer. The Southern Division is ill-provided with facilities for rapid communication. Ratnágiri and a considerable part of Kánara are shut off by the Western ghats with few roads for communication, mountainous and intersected by creeks running on land nearly to the foot of the ghats, and with no railways. On the other hand, the Central Division lies entirely upon the Deccan plateau, is well provided with railways running through each of the districts, and the headquarters are within easy access to the Nira Canal. It was, therefore, decided to place the three districts as a temporary measure under the Superintending Engineer, Central Division. But it is clear that this arrangement cannot be allowed to continue. Twelve Executive Districts, with an expenditure of more than Rs. 50 lakhs per annum, are too much for one officer to supervise, and the health of the officer and the public interests must suffer.

12. I am to say that the Governor in Council, after careful consideration, is of opinion that it is necessary that a new division of superintendence should be formed at once. This division would be called the Deccan Irrigation Division, and would comprise for the present the following Imperial Districts:—

(i) Násik and Ahmednagar Irrigation.
(ii) Pravara Canals.
(iii) Poona Irrigation.
(iv) Lake Whiting District, } Nira Right
(v) Lonand District } Bank
(vi) Málsiras District } Canal.

The expenditure of this division in 1913-1914 will be over Rs. 40 lakhs for works only, and is not likely to be less than this for the next five years at the least. It appears very probable that this division will be permanently required for the maintenance of the great canals with their complex system of intensive irrigation, but at present I am to ask only that the formation of the new division shall be sanctioned for five years as a temporary measure.

13. The Central Division will then comprise the following Provincial Districts:—

(i) East Khándesh. (iv) Ahmednagar.
(ii) West Khándesh. (v) Sholápur.
(iii) Násik. (vi) Poona.

The expenditure of these six districts is at present about Rs. 23 lakhs, excluding local fund works, and it is improbable that it will ever fall below Rs. 21 lakhs.

14. I am now to recapitulate very briefly the requirements put forward for the approval of the Government of India and the sanction of the Secretary of State:—

(*a*) The increase of the cadre of the Engineer Establishment from 100 to 132 and a recruitment of 6 men every year.

(*b*) The constitution of a new administrative division and appointment of an additional Superintending Engineer, 2nd Class, making a total of 7.

(*c*) As the present Superintending Engineer, Central Division, is much overworked, it is requested that the Secretary of State's sanction to (*b*) may be obtained by cable.

The necessary proposition statement in the prescribed form will be submitted on receipt of the approval of the Government of India to these proposals. It is difficult to calculate correctly the extra cost involved by the proposed increase in the scale as the additional staff is to be employed gradually. The Accountant-General, who was consulted in the matter, is unable to calculate it in the absence of actuarial tables. Roughly speaking, however, and assuming that the scale proposed will be fully worked up to, the extra cost will be about Rs. 7,000 per mensem as under:—

Excess.	Per mensem. Rs.	
1 Superintending Engineer, 2nd Class	1,750	
7 Executive Engineers (5 Imperial at the minimum rate of pay Rs. 800 and 2 Provincial at Rs. 535 per mensem)	4,000	
	1,070	
19 Assistant Engineers (13 at Rs. 380 per mensem and 6 at Rs. 250 per mensem)	4,940	
	1,500	
		13,260
Deduct cost of the 12 temporary Engineers referred to at end of paragraph 2 above:—	Rs.	
Mr. Benson	1,200	
Mr. Weatherdon	700	
Mr. Combi	550	
Mr. Bayliss	750	
Mr. Walker	620	
Mr. Bhandarkar	300	
Mr. Shaik Ebrahim	450	
Mr. Davies	450	
Mr. Bhagvat	500	
Mr. Goodwin	500	
Mr. Lyttle	250	
Mr. Naik	250	
		6,520
Total		6,740

I have the honour to be,
Sir,
Your most obedient servant,
H. V. R. KEMBALL,
Secretary to Government.

Accompaniment to this letter—1 Statement.

ACCOMPANIMENT TO ABOVE.

Statement showing the sanctioned scale of the Engineer Establishment, the actual strength, and the proposed strength necessary to meet normal requirements of the Bombay Public Works Department.

ANNEXURE D.

No. 2309-E

GOVERNMENT OF INDIA. PUBLIC WORKS DEPARTMENT.
Establishments.

From The Honourable Mr. R. P. RUSSELL, Secretary to the Government of India, Public Works Department, to The SECRETARY to the GOVERNMENT of BOMBAY, Public Works Department.

Simla, the 31st October 1913.

Sir,

I am directed to refer to your letter No. E.—4418, dated the 23rd April 1913, submitting the proposals mentioned below in connection with the cadre of the Engineer Establishment in the Bombay Presidency:—

(1) that a sixth administrative division be constituted, for a period of five years in the first instance, by splitting up the Central Division, and that an additional appointment of Superintending Engineer, class II, be sanctioned for that period for the charge of the new Division;

(2) that the cadre be increased from 100 to 132 Engineers;

(3) that six Assistant Engineers be recruited annually.

2. The Government of India concur in the conclusion come to by the Government of Bombay that the Central Division as at present constituted is too heavy a charge for a single Superintending Engineer to administer efficiently. They also think it possible that an additional Division will be required for the next five years, as suggested by the local Government; but they consider that pending the fixation of the cadre of the Engineer establishment in the Bombay Presidency—a matter which has already been referred to the Secretary of State—it will be better to create the new division for a period of two years in the first instance. It is for this reason that in their telegram No. 1683-E., dated the 29th August 1913, they sanctioned the creation of an additional Superintending Engineership for that period only. The additional appointment being a temporary one, cannot be added to the 2nd class of Superintending Engineerships, as proposed by the Government of Bombay, but must in accordance with the usual practice in such cases be placed in the lowest class.

3. With regard to the proposals relating to the increase of the cadre, I am to point out that the calculations on which the proposals are based do not follow the principles relating to the calculation of the strength of a cadre with reference to a given number of "superior posts." The increase in the number of inferior appointments proposed by the Government of Bombay is out of all proportion to the number of superior posts available in the Presidency if an equable flow of promotion is to be assured and if blocks are to be avoided. As explained in paragraphs 5 and 6 of Sir Lionel Jacob's letter No. 1220-E., dated the 8th July 1908, the total strength of the Imperial Engineer cadre is determined by the number of superior posts to be filled by Imperial engineers. It was stated in that letter that in order to fill 100 such posts with officers of over seven years' service, and to allow for the filling of leave vacancies, a strength of 178 officers was necessary. Since then the period for which an officer must serve before he becomes eligible for promotion to a superior post has, by the orders contained in the Government of India, Public Works Department, Resolution No. 439—458-E., dated the 15th May 1912, been extended to 10 years, and consequently a larger number of officers will now be required to fill the same number of posts. It has been calculated that under the new conditions of service a total strength of 211 Imperial officers, of whom 125 will be over 10 years' service, is required for every 100 superior posts. The total strength of the Provincial Engineer Service throughout India is at present fixed at 280 officers, of whom, it is calculated, 148 will be officers of over 10 years' service. Of the 280 officers, 30, as explained in paragraph 3 of Sir Lionel Jacob's letter of 8th July, 1908, form the share of the Bombay Presidency, and of the latter 16 will be officers of over 10 years' service. In order to admit of an equable flow of promotion to superior posts, it has been estimated that under the new conditions of service 133 superior posts should be provided for the Provincial Engineer Service. The proportion of superior posts to be filled eventually by the members of that service in the Bombay Presidency is therefore 14.

4. In determining the strength of the cadre the Government of Bombay propose to take into account the probable requirements 25 years hence, when certain large works now in course of construction or in contemplation are expected to be completed. I am, however, to observe that the Secretary of State has laid down the principle that the permanent Engineer staff should be regulated by the ascertained requirements of the service for the discharge of the duties which may certainly be reckoned upon as recurrent year by year, irrespective of any new large undertakings, provision for which should be made when necessary by the employment of temporary Engineers. In accordance with this principle, no provision can at present be made in the cadre of the Engineer establishment in the Bombay Presidency for the permanent establishment which may eventually be required for the maintenance of works the estimates for the construction of which have not yet even been sanctioned, such as the Gokok canal, and the Sukkur Barrage and Rohri canal. Nor is it usual to make provision in the regular cadre for other than existing permanent superior charges. Thus provision can at the present time be made in the cadre only for the new Kolaba district. In regard to the two sanitary districts (northern and southern), the constitution of which has been recommended in your letter No. E.-5372, dated the 20th May 1913, I am to mention that the Government of India are considering these two new charges in connection with the general question of the increase of th Sanitary Engineering establishments throughout India, and their orders on this proposal will be communicated separately to the Government of Bombay.

5. It appears from paragraph 4 of your letter of the 23rd April 1913 that including the Kolaba district there are at present 35 permanent executive charges. Adding to these the two posts for special and extra divisions and the 9 permanent administrative posts (3 Chief Engineerships and 6 Superintending Engineerships), the total number of permanent superior posts in the Presidency amounts to 46. The strength of the cadre based on existing permanent charges should, therefore, in accordance with the principles mentioned in paragraph 4 above, be 98 officers, that is, two less than the number sanctioned in 1908; but in view of the large amount of construction work in the Bombay Presidency, and of the fact that more than one regular division will probably be required when the existing construction work is completed, there is of course no question of effecting any reduction.

6. I am accordingly to remit the case to the Government of Bombay and to request that their proposals may be reconsidered in the light of the foregoing remarks.

7. As regards the question of recruitment raised in paragraph 9 of your letter, I am to say that the number of Imperial Assistant Engineers to be recruited annually is determined with reference to the total strength of the Engineer cadre for the whole of India, and that this number is distributed among the various provinces with reference to the state of the cadre of each. This year three Imperial recruits will be posted to the Bombay Presidency and it is understood that two Provincial Assistant Engineers* have been appointed, making five recruits in all.

I have, &c.,
(Signed) R. P. RUSSELL,
Secretary to the Government of India.

ANNEXURE E.

No. E.—150 OF 1914.

PUBLIC WORKS DEPARTMENT:
Bombay Castle, 7th January 1914.

From H. F. BEALE, ESQ., M.INST.C.E., Secretary to the Government of Bombay, to the SECRETARY to the GOVERNMENT of INDIA, Public Works Depart-Department.

SIR, *Establishments.*

I am directed to acknowledge the receipt of Mr. leMaistre's letter No. E.—1608, dated 15th August 1913, and to reply as follows.

2. The Governor in Council accepts the decision of the Government of India that the charge allowance of Rs. 100 a month given to each of the Under Secretaries cannot as such be increased because it is

* One Indian College recruit confirmed.
One promoted Subordinate.

given only as a remuneration for the arduous and responsible nature of their duties.

3. But I am to state that when the Bombay Government in their Financial Department No. 3659 of the 7th October 1909, accepted the draft rules proposed by the Government of India in their letter, Finance Department, No. 3367-F. O. and A., dated 3rd July 1909, they appear to have not fully appreciated the effect of rule V.

4. In Mr. Deputy Secretary leMaistre's letter now under reply it is practically affirmed that the new house allowance is all that can be granted to an officer to compensate him "for the extra cost of living in Bombay." I am to say that when the Government of Bombay submitted their house allowance scheme they based their figures of compensation entirely upon the calculated difference between what an officer paid as house rent and 10 per cent. of his pay. The grant of a presidency or local allowance on the other hand was given to compensate for the higher cost of living in Bombay, which is quite apart from the incidence of house rent, and is a heavy tax on bachelors as well as on married people. To abolish the latter compensation because the former has been brought up to the bare limit, which makes it serve its own purpose, is, this Government submits, much the same as to give a man a better house and deprive him of the adequate means of living in it.

5. When the Government of Bombay first submitted their proposals (in their Financial Department letter No. 1588, dated 13th April 1909) to the Government of India, they expressed their approval of the Bombay Committee's report and suggestions. In paragraph 5 of the letter a special stipulation was made that certain officers drawing local allowances should continue to draw them, and in paragraph 12 of the report the expression was used "these house allowances should be granted . . . . in lieu of the house rent allowances now drawn by them."

The Government of India in their answering letter No. 3367, Finance Department, already referred to, took no exception to the above, and when the scheme subsequently received the sanction of the Secretary of State, the Government of Bombay, overlooking the effect of rule V, issued their Government Resolution No. 1045, Financial Department, dated 23rd March 1911. Statement II (*a*) on page 19 of that Government Resolution set out clearly the allowances admissible to certain officers, and it was not until May 1912, more than a year later, that any question on the subject arose. The Accountant General, Bombay, then referred to rule V and refused to pass the presidency allowance for the Under Secretary, Public Works Department, in addition to the new house rent allowance. In answer to Mr. Secretary Hill's letter No. E.—6043, dated 3rd July 1912, explaining the case, the Government of India, in their letter No. 1131-E., dated 10th October 1913, supported the Accountant General's view.

6. A reference to the Bombay notes and minutes underlying the whole case shows that this decision was unexpected and in opposition to the original proposals of the Government of Bombay. I am to attach a statement showing in detail how not only the Under Secretaries, Public Works Department, but also the other Public Works Department executive officers stationed in Bombay are affected by the above ruling. The result works out as follows:—

Public Works Department Officer.	Original allowances, married or single.	Present allowances M. = Married S. = single or wife at home.	Loss per annum.
	Rs.	Rs.	Rs.
Under Secretary	2,940	M. 2,700	240
	2,940	S. 1,200	1,740
Executive Engineer, Presidency	1,740	M. 1,500	240
	1,740	S. 0	1,740
Assistant Engineer, Rs. 620 and upwards.	Same as Executive Engineer.		
Assistant Engineer, Rs. 500 to 580.	960	M. 1,500	Gain 540
	960	S. 0	Loss 960
Assistant Engineer, less than Rs. 500.	840	M. 990	Gain 150
	840	S. 0	Loss 840

Thus with two small exceptions these officers on being admitted to the benefits of the new house allowance scheme incur a loss of from Rs. 240 to Rs. 1,740 per annum. Considering that the previous allowances were deemed insufficient and that the new scheme was designed to ameliorate the condition of Government officers living in Bombay, the fact that the Public Works Department officers actually lose more or less heavily by the concession referred to in Rule V is in the opinion of this Government somewhat disappointing.

7. The Governor in Council is convinced that when the Government of India wrote their Finance Department letter No. 638-Ex., dated 31st January 1907, inviting the Government of Bombay to prepare a scheme of house rent allowances for their Presidency town, it was not their intention to reduce the emoluments of men drawing comparatively low pay. In these circumstances I am directed to urge very strongly upon the Government of India the necessity of granting again the presidency and other allowances for the Public Works Department officers referred to, with a view to the removal of a very real and grevious hardship.

8. It appears that the Government of India anticipated the possibility of some modification of the conditions being required, because in their despatch No. 117, Finance Department, dated 26th May 1910, forwarding the scheme to the Secretary of State they wrote:—

"Paragraph 4. We enclose statements of the appointments which, as at present advised, we propose to admit to the scheme. They will be subjected to further scrutiny, particularly in respect of the withdrawal of local allowances sanctioned on account of the high cost of house rents in Bombay and are now sent up merely in order to afford an indication of the cost of the scheme."

In these circumstances I am to express a hope that they will take a favourable view of the present representation.

9. So far I have dealt with the principle of restoring the presidency allowance to the Public Works Department officers for the reasons stated. I am directed now to make a further representation to the effect that Rs. 100 per annum is a totally inadequate figure for the presidency allowance. To prove this I am to attach a copy of letter No. 4946, dated 13th June 1913, from Mr. A. H. Whyte, Executive Engineer, Presidency, a man of simple tastes, who is married and has a small family. His pay till last October was Rs. 850, and as his wife is in India he draws Rs. 125 average house-rent. Deducting income-tax and contribution to the General Provident Fund his net pay amounts to Rs. 847, while his expenses are shown to be Rs. 909 exclusive of doctor's bills and savings for passage home and for additions to furlough pay.

10. It is evident that unless an officer of this standing has a private income he must run into debt in Bombay, and Government cannot consider this a fair condition of service. The Executive Engineer, Presidency, has very onerous duties to perform and he must be specially selected for his capability and energy. The billet, far from being a prize for good officers, may rightly be regarded as an appointment to be shunned in the present circumstances.

11. There can be no doubt that the cost of living in Bombay, quite apart from house rent, has increased considerably in recent years, and the arguments as to dearness of living apply equally to the other Public Works Department officers in Bombay. I am therefore to recommend the following scale of presidency allowances as suitable for the various ranks:

	Pay.	Presidency allowance.
	Rs.	Rs.
Executive Engineer, Presidency	800 to 1,250 per mensem.	250 per mensem.
Under Secretaries who rank as Executive Engineers.	800 (usually)	250
Assistant Engineer	380 to 750	150

APPENDIX XVI—*continued.*

If the allowance be granted, I am to ask that it may be sanctioned with retrospective effect from the date mentioned opposite the name of each of the officers in the footnote.*

12. In conclusion, I am to summarise the proposals put forward by this Government as follows:—

(*a*) The presidency and other allowances previously given, excepting the old house rent allowance, should not be withdrawn from the Public Works Department officers, as the new house rent allowances were not designed to do more than replace the old house rent allowances in Bombay, which had been proved to be inadequate.

(*b*) The presidency or local allowances, which were previously limited to Rs. 100 per mensem, are (like the old house rent allowances) found to be insufficient, and should be raised to Rs. 250 for Executive Engineers and Rs. 150 for Assistant Engineers permanently stationed in Bombay.

I am to express the most earnest hope that the Government of India will be able to treat this case in a sympathetic manner, as the efficiency of the administration and the execution of the many important works in hand and projected in the City of Bombay must suffer, if officers are overwhelmed with private cares and difficulties in their everyday life.

I have the honour to be,
Sir,
Your most obedient Servant,
H. F. BEALE,
Secretary to Government.

Accompaniment to above letter:—

No. 4946 of 1913.

From A. H. Whyte, Esquire, Executive Engineer, Presidency, to the Chief Engineer, Public Works Department, Bombay.

Executive Engineer's Office,
Public Works Department,
Bombay, 13th June 1913.

SIR,

I HAVE the honour to represent the following facts for the favourable consideration of Government.

2. I have now been serving for a period of 10 years in Bombay, first as Assistant Engineer under the Consulting Architect to Government and later as Executive Engineer, Presidency District, to which post I was appointed in March 1912 on a salary of Rs. 800 per mensem.

3. Up till now, the post of Executive Engineer, Presidency, has nearly always been held by an officer considerably senior in rank and consequently drawing a higher salary.

4. In my present position, my expenses are very much more than I would be likely to incur in the districts, and although I receive a House Rent Allowance of Rs. 125 $\frac{(80 + 170)}{2}$ average for the year, I find it quite impossible to live on my salary, as a statement of my average monthly expenses given below† shows; and were it not for the fact that I have a small private income, I should be compelled to run into debt or ask for a transfer.

5. My total emoluments are Rs. 850 + 125, average House Rent, from which Income Tax of Rs. 22 is deducted, also my subscription to the General Provident Fund of Rs. 106, giving a net total of Rs. 847 per mensem. I am thus quite unable to save anything for going home for the benefit of my health, to see my child, or even to send my wife home or to the hills should necessity arise, and for other emergencies, such as Doctors' fees for my wife and family.

6. I do not think it will be denied that the cost of living in Bombay has increased very considerably in the last 10 years, especially house rent.

7. Mr. Hill gave me to understand that one of the reasons why I was chosen for the post was my long experience of Bombay and local conditions; but had I been allowed to remain on in Dhárwár District, I should certainly have been able to live within my pay and probably to have saved something.

8. Further, I should like to mention the case of Assistant Engineers stationed in Bombay. At the present moment, I have only one Assistant Engineer who is drawing House Rent and Local Allowance under the old scheme in addition to his salary; but should he be transferred out of Bombay—no matter for how short a period—he would, on returning to Bombay, be compelled to forego the allowances under the new rules or accept a smaller one in its place, if he be married. This applies to all Assistant Engineers posted to Bombay.

9. Assistant Engineers' expenses are greatly enhanced the moment they arrive in Bombay and unless they are assisted by means of a local allowance, say Rs. 150 per mensem, or by private means they are likely to get into debt.

10. I would respectfully request that Government will be pleased to sanction to all Executive and Assistant Engineers who may be stationed in Bombay, Local Allowances at the rates of Rs. 250 and 150, respectively, and in my own special case with retrospective effect from the date I took over charge of the office.

I have the honour to be,
Sir,
Your most obedient servant,
A. H. WHYTE,
Executive Engineer, Presidency.

* Mr. A. H. Whyte, Executive Engineer, Presidency District, 13th March 1912; Mr. H. J. M. Cousens, B.Sc. (Eng.), Executive Engineer and Under Secretary to Government, Public Works Department, Roads and Buildings Branch, 11th December 1912; Mr. E. M. Duggan, B.Sc. (Eng.), A.M.I.C.E., Executive Engineer and Under Secretary to Government, Public Works Department, Irrigation and Railways, 17th November 1912; Mr. J. C. Gammon, B.Sc. (Eng.), A.C.G.I., Assistant Engineer under the Consulting Architect to Government, 12th April 1913, with a short break of about a month when he was sent to Sind.

APPENDIX XVII.

Memorandum prepared by the Administration of the Central Provinces and Berar relating to the Public Works Department.

1. The present regulations as to recruitment, training and probation, and whether these regulations are satisfactory.

(*a*) *Imperial Service.*—The Regulations for the appointment of officers to the Imperial Service of the Public Works Department are given as Appendix VIII of the Memorandum on the Department prepared by the Government of India for the Royal Commission.

(*b*) *Royal Engineers.*—Officers are selected from the Corps of Royal Engineers on the Indian Establishment, and are appointed permanently at once in the 3rd or 2nd Grade of Assistant Engineers. Officers whom it is considered desirable to appoint to a higher grade than that of Assistant Engineer, 1st Grade, are posted as supernumeraries for a period of six months, after which a report is made as to their qualifications.

These officers are liable for recall to Military duty and form a War Reserve.

(*c*) *Provincial Service.*—The Regulations for the Provincial Service are contained in Appendix I of the Memorandum referred to above. The probationary period for qualified students is ordinarily one year.

(*d*) *Remarks.*—The system of recruitment, training, and probation at present in force is working satisfactorily on the whole, and the Officiating Chief Commissioner has no suggestions to make for its improvement.

The organisation of the service is, however, not on a satisfactory basis, and the system by which officers on the same list doing the same class of work are divided into Imperial and Provincial according as they are recruited in England or India is unsound.

The distinction between the two branches of the service proposed by the Public Service Commission of 1886, and introduced in 1892, was practically abandoned in the orders contained in Government of India, Public Works Department, Resolution No. 439—458-E., dated the 15th May, 1912, and the retention of the names Imperial and Provincial serves no useful purpose.

2. At the same time the training afforded by the Engineering Colleges in England is still superior to that which can be procured in India and will continue to be so for many years to come. This is due partly to the superior equipment of those Colleges, and so far as this defect is concerned, it would no doubt be possible to provide a remedy by establishing a fully equipped Engineering College in India. Such a College will not, however, succeed in producing Engineers on a large scale equal to those that can be trained in England, for in industrial development India is far behind England, and it is the industrial development of a country with its large demand for trained Engineers and its opportunities for their practical training more than the equipment of the College that secures a highly trained Engineer. Until, therefore, the industries of India have expanded more than they have done at present, it seems improbable that the best of the Indian trained Engineers will be equal to the best of those trained in England, and as the presence of Engineers trained in the best school available is essential to the maintenance of the high efficiency of the service, it is, in Mr. Crump's opinion, desirable to continue to recruit a certain proportion of the higher branch of the Public Works Department from England.

It is also desirable to employ members of the Corps of Royal Engineers in the service as a convenient way of maintaining the War Reserve required for Military purposes.

The balance of the Engineers required to complete the cadre would be recruited direct from the Engineering Colleges in India and in every exceptional cases by promotion from the subordinate ranks.

It appears from page 8 of the Memorandum prepared by the Government of India on the Public Works Department that at present the number of vacancies occurring each year is about 37 and that these are filled as follows:—

20 (including 10 per cent. of Indians) recruited in England.

14 recruited in India, 9–10 in alternate years by direct appointment from Indian Colleges.

3 from Royal Engineers.

These proportions are at present suitable, though when the expansion of industries in India leads to an increased demand for Engineers for private employ in India and an improvement of the supply of locally trained Engineers, it will no doubt be possible to replace a portion of the Engineers recruited in England by men trained at the Indian Colleges.

The question of the rates of pay and allowances and the rules for leave and pension for officers recruited in England and India, depends not on the fact that the majority of the former are English and of the latter Indian, but on the market value of their services. Engineers trained in English Colleges are to be found in every part of the world, and have a far larger field of employment open to them than those trained in Indian Colleges, and are thus able to command a higher price in the market. Many Engineers working in England earn far more than India can afford to pay, and those that are willing to go to Foreign Countries such as South America, or to the Colonies such as Australia or Africa, command a higher wage than their equals who stay in England.

If India, therefore, wishes to obtain any portion of its Engineering staff from England, as it must for many years to come if efficiency of the service is to be maintained, it must be prepared to pay for them, and the rates of pay recently sanctioned for the Imperial Service require no change. It applies equally to all, whether English or Indian. At present the members of the Provincial Service, who are recruited in India, are paid at approximately two-thirds of the rate of pay sanctioned for those recruited in England until they rise to the rank of Chief Engineer. Owing to the absence of any large demand for their services outside Government employ, their present market value is less than that of the Engineers trained in England, and the present rates of pay require no alteration, except that on selection as Superintending Engineer both classes should be paid alike, for such selection shows that their market value has become the same.

2. The rates of pay and allowances in force in 1890 and 1900 and at the present time, and whether the present rates of pay and allowances are satisfactory.

The rates of pay and allowances in 1890, 1900, and at the present time are given below:—

(*a*) *Imperial Service.*

1890.		1900.		1913.	
Rank.	Pay.	Rank.	Pay.	Rank.	Pay.
	Rs.		Rs.		Rs.
Chief Engineer—		Chief Engineer—		Chief Engineer (*a*)—

		Old 3rd Grade	250		
Apprentice Engineer	100				

(*a*)—1913—Local allowance Rs. 150 per mensem is drawn by a Secretary and Joint Secretary to Local Administration, *vide* paragraph 10 of Public Works Department Code, Volume I.

(*b*)—1913—Local allowance of Rs. 100 per mensem is drawn by Under Secretary to the Chief Commissioner, Public Works Department, Central Provinces.

APPENDIX XVII—*continued.*

(*b*) *Royal Engineers.*—In 1890 and 1900 Royal Engineer Officers in Civil employment in the Public Works Department might receive their net Military pay in addition to the pay of their Civil grade, or their staff salary plus Military pay and allowances. In 1913 Royal Engineer Officers who joined the Public Works Department after the 11th February 1910 draw pay at the rates given above for Imperial Engineers.

(*c*) *Provincial Service.*

1900.		1913.

3rd „ ...	250		
Apprentices	100	Apprentices	100

* NOTE.—Apprentice Engineers, other than qualified students appointed from the Thomason College, Rurki, may, after 6 months' satisfactory service, receive Rs. 150 per mensem.

A special increment of Rs. 50 may be granted by the Local Administration to a deserving Executive Engineer who, after completion of 5 years on the maximum pay of Rs. 850, is not promoted to Administrative rank.

The Provincial Service was organised in 1892.

For Chief Engineers of the Provincial Service the rates of pay are the same as those of the Imperial Service given above.

(*d*) *Remarks.*—Subject to the proposals made under head I for a reorganisation of the service and the fixing of the pay of officers recruited in India at two-thirds of that of those recruited in England, the present rates of pay are generally suitable. In the case, however, of Superintending and Chief Engineers, the present orders by which these posts are graded do not always work fairly. Superintending Engineers are appointed and promoted by the Local Government, but as an officer is ordinarily promoted to the rank of Superintending Engineer after 20 years' service, the division into classes may result in his never attaining the highest class before the time comes for him to retire. A time-scale would, in Mr. Crump's opinion, work more equitably, and he recommends the abolition of classes for Superintending Engineers, and that the pay of these officers be fixed at Rs. 1,500—100—2,000, with the proviso that no officer under 22 years' service should be eligible for increments even if appointed permanently as a Superintending Engineer.

In the case of Chief Engineers also, Mr. Crump is in favour of the abolition of the second class, and the pay of Chief Engineers being fixed at Rs. 2,750.

3. The number of posts in each grade, and the provision, if any, made in the cadre for leave and training.

The number of sanctioned posts is as follows (which includes a provision of one Superintending Engineer, one Executive Engineer and one Assistant Engineer for Central India):—

Post.	Number.
Chief Engineers (*a*)	2
Superintending Engineers	5
1st Class, 1.	
2nd Class, 2.	
3rd Class, 2 (*b*).	
Executive Engineers (*c*)	18
Assistant Engineers	16

(*a*) Including one Chief Engineer, 2nd Class, sanctioned for two years.

(*b*) Including one Superintending Engineer sanctioned for two years.

(*c*) Including one Executive Engineer sanctioned for the post of second Under Secretary, Public Works Department, for two years.

The sanctioned provision for absentees is 7 posts, or 20 per cent. of 35, which was the former strength of the Department, making a total sanctioned strength of 48, though the actual strength is at present 49.

The following statement shows the present distribution of the 49 posts between Imperial and Provincial:—

Rank.	Imperial.	Provincial.	Total.
Chief Engineer ...	2	—	2
Superintending Engineer	5	—	5
Executive Engineer ...	20	3	23
Assistant Engineer ...	8	11	19
	35	14	49

4. What appointments outside the authorised cadre are held, temporarily or otherwise, by officers of the service.

Outside the number of sanctioned posts detailed under the previous head, there is one post of Sanitary Engineer, Central Provinces, held by an Executive Engineer of the Public Works Department.

Besides the sanctioned cadre, Temporary Engineers, in numbers varying as occasion demands, are employed in the Department on pay ranging from Rs. 150 to Rs. 750 per mensem. At present 28 Temporary Engineers are entertained.

5. Whether any addition is required to the present cadre.

The existing scale of permanent establishment provides for:—

Roads and Buildings Branch—

One Chief Engineer.

Two Superintending Engineers.

Nine Divisional Charges.

One Under Secretary in the Public Works Department.

Irrigation Branch—

One Chief Engineer sanctioned temporarily for two years.

Two Superintending Engineers—one sanctioned temporarily for two years.

Four Divisional Charges.

One Under Secretary in the Public Works Department, sanctioned temporarily for two years.

This cadre, even including the appointments sanctioned temporarily, is not sufficient to carry on the large programme of work which the rapid development of the Province requires, and the necessity of a large increase of permanent establishment has been pressed frequently on the Government of India, and the proposals are only held in abeyance pending the Report of the Royal Commission on the Public Services.

Temporary Engineers should only be employed to carry out the construction of large works with which the permanent staff cannot deal, and all ordinary work and maintenance should be entrusted to the permanent staff, the strength of which should be fixed accordingly.

Taking first the supervising staff, with the large Irrigation works now under construction, such as the Tendula Canal, the Mahanadi Canal and the Weinganga Canal, the maintenance of which will have to be provided for, it is clear that the temporary appointments of a Chief Engineer, a Superintending Engineer and an Under Secretary which have been only sanctioned temporarily for two years, will be needed permanently.

The maintenance of these works and the construction of further Minor and Major Irrigation works of

which the Province stands in need and the maintenance of such works and of those already constructed will also require an addition to the existing four Divisions in the Irrigation Branch, and in 1910 and again in 1912 and in 1913 the Government of India were asked to sanction the creation of three new Irrigation Divisions with a staff of three Executive Engineers and three Assistant Engineers.

In the Roads and Buildings Branch the work of the Nagpur Division has increased so enormously that it has been found necessary to divide it into three Divisions, two with headquarters at Nagpur and one at Chanda. Two of these Divisions are at present only temporary, and in 1910 the necessity of making the Chanda Division permanent was pressed on the Government of India. Since then the pressure has increased, and Mr. Crump considers that with the large area of the Nagpur Division and the importance of its roads and buildings it will be necessary to make the third Division also permanent, if the principle that Temporary Engineers should be employed only as temporary additions to the permanent staff is to be maintained. Two Executive Engineers and two Assistant Engineers are therefore required in the Roads and Buildings Branch.

The permanent additions to the Cadre now needed are:—

Chief Engineer ...	1	At present sanction exists for two years only with effect from the 12th November, 1912.
Superintending Engineer	1	Sanctioned for two years only which will expire in November 1914.
Executive Engineers	6	Including one Executive Engineer sanctioned for Under Secretary's post in the Irrigation Branch for two years from the 13th November, 1912.
Assistant Engineers	5	
Total	13	
Absentees at 20 per cent.	3	
Total Engineer officers required	16

APPENDIX XIX.

Indian Public Works Department and Indian State Railways.

Regulations as to Appointment of Assistant Engineers, 1914.

1. The Secretary of State for India in Council will, in the year 1914, make *about 30* appointments of Assistant Engineers in the Public Works and State Railway Departments of the Government of India.

In making these appointments he will act with the advice of a Selection Committee, including at least one eminent representative of the Engineering profession.

2. Applications for the appointments must be made on a printed form to be obtained from the Secretary, Public Works Department, India Office, Whitehall, London, S.W., and to be returned so as to reach *him not earlier than 1st February 1914,** and not later than *Wednesday the 1st April 1914.*

3. Candidates must have attained the age of 21 and not attained the age of 24 years on the 1st July 1914. To this rule no exception can be made.

[N.B.—*Natives of India must obtain a certificate of age and nationality in the form explained in Annexure II. As the production of this certificate is a necessary condition of appointment, candidates are advised to procure it without delay. The certificate should be forwarded to the India Office together with the candidate's form of application or at the earliest subsequent opportunity.*]

4. Every candidate, except as provided in Regulation 5, must be a British subject of European descent, and at the time of his birth his father must have been a British subject, either natural-born or naturalised in the United Kingdom. The decision of the Secretary of State in Council as to whether a candidate satisfies this condition shall be final. He must also be of good moral character and sound physique.

5. Natives of India who are British subjects, and are not qualified under Regulation 4, are eligible for appointment, and shall be selected to the extent of 10 per cent. of the total number of Assistant Engineers thus recruited, if otherwise duly qualified.

6. Candidates must produce evidence that they have either (1) obtained one of the University degrees mentioned in Annexure I.; or (2) passed the A.M.I.C.E. examination; or (3) obtained such other diploma or distinction in Engineering, as may, in the opinion of the Selection Committee, be accepted as approximately equivalent to the degrees mentioned.

It will be for the Selection Committee to decide in dealing with the applications, whether they will recommend any candidate under head (3).

7. It is preferred that candidates should have taken a college course and obtained one of the degrees mentioned in Annexure I. It is advisable that in addition they should have had at least one full year's practical experience of Civil Engineering under a qualified civil engineer at the time when they appear before the Selection Committee. Those whose qualifying diploma has been obtained without a college course should have had a full three years of such practical experience. In the event of any candidate being selected who has not, in the opinion of the Selection Committee, had sufficient practical experience, he may be required to undergo, after arrival in India, a year's probation in charge of works, and his final appointment will be made dependent upon the result of such probation.

8. Candidates must be prepared, if called upon, to attend at the India Office, at their own expense, for a personal interview with the Selection Committee, which will probably take place at the end of April or early in May 1914.

9. They will further be required, before final appointment by the Secretary of State in Council, to appear, at their own expense, before the Medical Board at the India Office for examination as to their physical fitness for service in India.

The Regulations governing the physical examination of candidates for the Public Works and State Railway Departments of the Government of India are given in Annexure V.

**10. Selected candidates will also be required to satisfy the Secretary of State, in such manner as he may determine, of their ability to ride.*

11. They will on appointment be provided with a free first-class passage to India and they will be expected to proceed thither about the end of September 1914.

Their pay will begin from the date of their landing in India, and, if they so desire, they will be able to obtain an advance of two months' pay, recoverable by monthly instalments of one-third of salary. Of this advance a proportion not exceeding one-half may be received in England, and the balance can be drawn in India.

12. They will enter the Service as Assistant Engineers, on a salary of Rs. 4,560 a year (equivalent to 304*l.* a year, when the rupee is at 1*s.* 4*d.*).

13. The instruments required by Assistant Engineers are supplied to them in India.

14. Particulars as to their prospects of pay, pension, &c., are contained in Annexures III. and IV.

India Office,
December 1913.

NOTE FOR THE INFORMATION AND GUIDANCE OF CANDIDATES.

The Selection Committee of 1906 drew attention to the subjects which were held to be of most importance for the Public Works Service, viz.:—

Pure Mathematics, including a knowledge of the differential and integral calculus.

Applied Mathematics.

Geometrical and Engineering Drawing.

Surveying and Geodesy.

Strength and Materials and Theory of Structures.

Hydraulics.

Heat Engines.

Materials used in Construction.

Building Construction.—Wood and metal work, limes and cements, and building with stone, brick, and concrete.

Knowledge of the principles of road-making, waterworks, sanitary and railway engineering. (Important.)

The Selection Committee were further of opinion that all candidates should have had some workshop training.

---

* Applications from candidates not resident in the United Kingdom may be submitted before this date and since the India Office cannot undertake to correspond with candidates except by letter, such applications should be submitted as early as possible.

* Selected candidates will be examined by the Civil Service Commissioners as to their ability to ride, and will be required to obtain either—

(*a*) a certificate from the Civil Service Commissioners that they are able to ride well and to perform journeys on horseback; or

(*b*) a certificate from the Civil Service Commissioners of minimum proficiency in riding.

In the latter case they will be subjected, on their arrival in India, to such further tests in riding as may be prescribed by their Government.

Candidates are warned that the certificate of minimum proficiency in riding, without which they will not be allowed to proceed to India, is only granted to those who can qualify in a series of tests, which includes jumping.

The chief tests will be saddling and bridling; mounting and dismounting; trotting and cantering; riding at a trot, without stirrups; riding at a trot with stirrups but without reins, jumping a hedge hurdle about 3 feet in height.

Although the examination will, in the main, be confined to these points, the examiner will not be debarred from applying any other tests which may appear desirable.

APPENDIX XIX—*continued.*

The following Announcement regarding the recruitment of the Public Works Department in future years is published for the information of intending candidates:—

The foregoing Regulations apply only to the appointment of Assistant Engineers in the permanent establishment of the Public Works Department in 1914, but it is the intention of the Secretary of State for India in Council, as at present advised, to recruit the permanent establishment of the Department in succeeding years on the same general lines as those already laid down; see, however, Note to Annexure I.

The Secretary of State is unable to give any undertaking that the Regulations will remain unaltered in the future.

ANNEXURES.

ANNEXURE I.

LIST OF DEGREES REFERRED TO IN PARAGRAPH 6.

Note.—Certain modifications of this Annexure to be applicable to students entering on their University course after June 1914, are under consideration.

University of Oxford.—B.A. (with honours in the Engineering Science Final Honours School).

University of London.—B.Sc. (Engineering).

University of Cambridge.—B.A. Honours (Mechanical Science Tripos).

Univ. of St. Andrews.—B.Sc. (Engineering).

University of Glasgow.—B.Sc. (Engineering).

University of Edinburgh.—B.Sc. (Engineering).

Victoria University of Manchester (or Victoria University).—B.Sc. (with honours in Engineering), and B.Sc. Tech. in "Mechanical" or "Electrical" Engineering (Honours Division in the Final Examination).

University of Liverpool.—B.Eng.; provided the degree be obtained by passing the Examination of the University.

University of Leeds.—B.Sc. in Civil or Mechanical Engineering.

University of Sheffield.—B.E. (First Class in the Final Examination).

University of Birmingham.—B.Sc. (Engineering). Provided that the Engineering Matriculation Examination shall have been passed before entry upon any course of study which forms part of the Degree course; and that a regular course of study, occupying not less than three academical years, shall have been pursued between the passing of such Matriculation Examination and the passing of the Final Examination for the degree.

University of Dublin.—B.A.I.

Royal University of Ireland.—B.E. and M.E.

University of Wales.—B.Sc. (in the Department of Civil, Mechanical, or Electrical Engineering).

University of Durham.—B.Sc. in Civil, Mechanical, or Electrical Engineering or in Naval Architecture; provided that the Matriculation Examination for Engineering and Naval Architecture shall have been passed before entry upon any course of study which forms part of the degree course.

University of Bristol.—B.Sc. in Civil or Mechanical Engineering.

Other degrees.—Any other degree of a University or College in the United Kingdom which may hereafter be recognised by the Council of the Institution of Civil Engineers as exempting the holder from passing the examination for Associate Membership.

ANNEXURE II.

PARTICULARS REGARDING THE CERTIFICATE OF AGE AND NATIONALITY TO BE OBTAINED BY CANDIDATES WHO ARE NATIVES OF INDIA.

A.—*Rules for Candidates born within His Majesty's Dominions.*

1. A candidate who is resident in British India must obtain a certificate signed either (*a*) by the Secretary to Government (or his lawful deputy) of the province in which his family resides, or (*b*) by the Commissioner (or his lawful deputy) of the District in which his family resides.

2. A candidate who is resident in a Native State must obtain a certificate signed by the highest Political Officer (or his lawful deputy) accredited to the State in which his family resides.

3. The certificate required must be in the following form—

"I hereby certify that has submitted the proofs of his birth detailed below,* and has satisfactorily shown that he was actually born on or about the date stated, viz., the day of 18 , at , a place within His Majesty's dominions."

*(*Here enter details*).

and the nature of the evidence produced must be such as to satisfy the officer who issues the certificate.

4. The documentary evidence which a candidate may be expected to produce in order to obtain such certificate comprises:—

(*a*) The horoscope.
(*b*) Family books.
(*c*) Tradesmen's account books showing entries relating to the birth.
(*d*) The record of admission in the registers of the school in which the candidate was educated, and the record of the candidate's age at various periodical school examinations.
(*e*) If the candidate is matriculated, a certified copy of his application to the Registrar in Form A.

Oral testimony from persons able to give relevant evidence may also be taken.

5. If a candidate has proceeded to England without obtaining a certificate, the certificate may be granted to his father or guardian on production of the requisite evidence.

B.—*Rules for Candidates not born within His Majesty's Dominions.*

6. The rules are the same as the foregoing except that a candidate not born within His Majesty's dominions must also prove that he is the son or grandson of a person born in those dominions, and in his case the form of certificate must be not as in paragraph 3 above but as follows:

"I hereby certify that has submitted the proofs of his birth detailed below* and has satisfactorily shown that he was actually born on or about the date stated, viz., the day of 18 , and that he was born at a place without His Majesty's dominions, but that he is $\frac{\text{son}}{\text{grandson}}$ of a person born in those dominions."

*(*Here enter details*).

ANNEXURE III.

PARTICULARS REGARDING THE INDIAN PUBLIC WORKS DEPARTMENT (EXECUTIVE BRANCH).

(*The arrangements and salaries hereinafter described are subject to revision according to the requirements of the Service.*)

1. The Engineer Establishment of the Indian Public Works Department consists of a staff of Engineers, military and civil, engaged on the construction and maintenance of the various public works undertaken by the State in India.

2. The permanent establishment of the Department is recruited from the following sources:—

(1) Officers of Royal Engineers.

(2) Persons appointed to the Imperial Service by the Secretary of State by selection from the United Kingdom.

(3) Persons educated at the Government Civil Engineering Colleges in India, and appointed to the Provincial Services by the Government of India.

(4) Occasional admission of other qualified persons.

3. The various ranks of the Department are at present as follows:—

	Salary per Annum (Imperial Service). Rs.
Chief Engineer, First Class	33,000
,, ,, Second Class	30,000
Superintending Engineer, First Class ...	24,000
,, ,, Second Class...	21,000
,, ,, Third Class ...	18,000
Executive Engineer, 20th year of service and following years	15,000
,, ,, 19th year of service	14,000
,, ,, 18th year of service	13,800
,, ,, 17th year of service	13,200
,, ,, 16th year of service	12,600
,, ,, 15th year of service	12,000
,, ,, 14th year of service	11,400
,, ,, 13th year of service	10,800
,, ,, 12th year of service	10,200
,, ,, 11th year of service	9,600
*Assistant Engineer, 10th year of service	9,000
,, ,, 9th year of service	8,400
,, ,, 8th year of service	7,920
,, ,, 7th year of service	7,440
,, ,, 6th year of service	6,960
,, ,, 5th year of service	6,480
,, ,, 4th year of service	6,000
,, ,, 3rd year of service	5,520
,, ,, 2nd year of service	5,040
,, ,, 1st year of service	4,560

4. The increments will be given for approved service only, and in accordance with the rules of the Department.

Exchange compensation allowance will not be granted to future entrants.

5. Promotions above the grade of Executive Engineer are dependent on the occurrence of vacancies in the sanctioned establishment, and are made wholly by selection; mere seniority is considered to confer no claim to promotion.

ANNEXURE IV.

PARTICULARS RELATING TO PENSIONS, PROVIDENT FUND, AND LEAVE.

(Not printed).

ANNEXURE V.

Regulations as to the Physical Examination of Candidates for Appointment to the Public Works Department of the Government of India.

Note.—These Regulations are published for the convenience of candidates and in order to enable them to ascertain the probability of their coming up to the required physical standard. But it must be clearly understood that the Secretary of State reserves to himself an absolute discretion to reject as unfit any candidate whom he may consider, after hearing the opinion of his medical advisers, to be physically disqualified for the public service; and that his discretion is in no respect limited by these Regulations.

It is not the practice to communicate to candidates who may be reported as physically unfit for service in India the reasons for the Medical Board's opinion.

General Physical Requirements.

1. A candidate must be in good mental and bodily health, and free from any physical defect likely to interfere with efficient performance of duty.

2. In the examination of candidates the Medical Board will apply the following table of correlation of age, height, and chest girth:—

Age.	Height without Shoes.	Chest. Girth when expanded.	Chest. Range of Expansion.
	Inches.	Inches.	Inches.
21 and upwards	62½ and under 65 ...	35	2
	65 ,, 68 ...	35½	2
	68 ,, 70 ...	36	2
	70 ,, 72 ...	36½	2½
	72 and upwards ...	37	2½

3. *Measurement of Height.*—The candidate will be placed against the standard with his feet together, and the weight thrown on the heels, and not on the toes or outside of the feet. He will stand erect without rigidity, and with the heels, calves, buttocks, and shoulders touching the standard; the chin will be depressed to bring the vertex of the head level under the horizontal bar, and the height will be noted in parts of an inch to eighths. In the Indian Police Force a maximum height of 5 ft. 4 ins. is required, but in other Departments no fixed limit of height is imposed.

4. *Measurement of Chest.*—The candidate will be made to stand erect with his feet together, and to raise his hands above his head. The tape will be carefully adjusted round the chest, with its posterior upper edge touching the inferior angles of the shoulder blades, and its anterior lower edge the upper part of the nipples. The arms will then be lowered to hang loosely by the side, and care will be taken that the shoulders are not thrown upwards or backwards so as to displace the tape. The candidate will then be directed to empty his chest of air as much as is possible. This is best done by continuous whistling with the lips as long as sound can be produced. The tape is carefully gathered in during the process, and when the minimum measurement is reached it is recorded. The candidate will then be directed to inflate his chest to its utmost capacity. This maximum measurement will likewise be noted. The girth with the chest fully expanded and the range of expansion between the minimum and the maximum will then be recorded.

5. The hearing must be good.

6. The speech without impediment.

7. The teeth in good order, *i.e.*, decayed or broken teeth must be properly stopped or crowned, and deficient teeth replaced by artificial teeth where necessary for effective mastication.

8. The chest must be well formed, the lungs and heart sound.

9. Rupture, hydrocele, varicocele, varicose veins in a severe degree, or other condition likely to cause inefficiency will disqualify a candidate, unless such condition is cured by operation.

10. The limbs, feet, and toes must be well formed and developed, with free and perfect motion of all the joints.

11. A candidate must have no congenital malformation or defect likely to interfere with efficiency.

12. A candidate must not be the subject of chronic skin disease.

13. Evidence of previous acute or chronic disease pointing to an impaired constitution will disqualify.

14. The Regulations as to the standard of vision required are shown separately for each department. In all cases of "colour blindness" a note of the same will be made on the candidate's papers.

* Officers of the Assistant Class will ordinarily pass into the executive class in the 11th year of service, but no Imperial Engineer may draw more than Rs. 9,600 per annum unless he holds charge of a division or a charge of equal importance.

APPENDIX XIX—*continued.*

Candidates may, if they wish it, undergo a preliminary examination by the Medical Board, which meets at the India Office every Tuesday, under the following conditions:—

(*a*) Applications must be addressed to the Under Secretary of State, India Office, Whitehall, London, accompanied by a fee of two guineas, and a statement as to the particular appointment which the candidate desires to obtain.

(*b*) Candidates must pay their travelling expenses.

(*c*) Candidates considered to be unfit by the Medical Board at this preliminary examination are not bound to accept its opinion, but may, *at their own risk*, continue their studies, with the knowledge that they will have to submit themselves for a final medical examination by the Medical Board, prior to the examination, or to their appointment.

(*d*) On the other hand, it must be distinctly understood that the preliminary examination by the Medical Board is held solely for the candidate's information, and that, if after that examination he is reported to be apparently fit, he has not on that account any claim to be accepted as physically fit when he presents himself for the final Medical Examination, upon which alone his acceptance or rejection will depend. Candidates may be considered fit for the Service at the preliminary examination, but may be found at the final examination to be unfit, either on account of some physical defect which did not exist or passed undetected at the preliminary examination, or for other reasons.

Regulations as to the Standard of Vision.

1. If myopia in one or both eyes exists, a candidate may be passed provided the ametropia does not exceed 3·5 D, and if, with correcting glasses not exceeding 3·5 D, the acuteness of vision in one eye equals $\frac{6}{6}$ and in the other $\frac{6}{9}$, there being normal range of accommodation with the glasses.

2. Myopic astigmatism does not disqualify a candidate, provided the lens, or the combined spherical and cylindrical lenses, required to correct the error of refraction, does not exceed 3·5 D; the acuteness of vision in one eye, when corrected, being equal to $\frac{6}{6}$, and in the other $\frac{6}{9}$, together with normal range of accommodation with the correcting glasses, there being no evidence of progressive disease in the choroid or retina.

3. A candidate having total hypermetropia not exceeding 4 D is not disqualified, provided the sight in one eye (when under the influence of atropine) equals $\frac{6}{6}$, and in the other eye equals $\frac{6}{9}$, with + 4 D glasses, or any lower power.

4. Hypermetropic astigmatism does not disqualify, provided the lens or combined lenses required to cover the error of refraction do not exceed 4 D, and that the sight of one eye equals $\frac{6}{6}$, and the other $\frac{6}{9}$, with or without such lens or lenses.

5. A candidate having a defect of vision arising from nebula of the cornea is disqualified if the sight of one eye be less than $\frac{6}{12}$. In such a case the better eye must be emmetropic. Defects of vision arising from pathological or other changes in the deeper structures of either eye, which are not referred to in these rules, may exclude a candidate.

6. Squint or any morbid condition, subject to the risk of aggravation or recurrence, in either eye, may cause the rejection of a candidate. Any imperfection of the colour sense is a disqualification for appointment to the engineering branch of the Railway Department. In other cases the existence of imperfection of colour sense will be noted on the candidate's papers.

FOR ALL APPOINTMENTS UNDER THE INDIAN GOVERNMENT A DECLARATION, AS FOLLOWS, IS REQUIRED FROM CANDIDATES.

1. I.....declare upon honour that, to the best of my knowledge and belief, I am not at present suffering or affected with any form of disease or bodily infirmity, such as—

(*a*) Disease of the heart or lungs.
(*b*) Venereal disease.
(*c*) Fits.
(*d*) Rupture.
(*e*) Varicocele or varicose veins.
(*f*) Hydrocele.
(*g*) Malformation.
(*h*) Congenital defect.
(*i*) Defective sight or hearing.
(*j*) Loss of teeth.
(*k*) Impediment in speech.
(*l*) Gout or rheumatism.

2. That I have not to my knowledge any hereditary tendency or predisposition to mental or constitutional disease, such as—

(*a*) Fits or insanity.
(*b*) Cancer.
(*c*) Consumption or scrofula.

3. That I will fully reveal to the Medical Board all circumstances within my knowledge that concern my health and fitness for the appointment for which I am a candidate.

4. That I have previously been examined by a Medical Board for the public service and was declared on the .

Signature.....
Date.....

N.B.—A wilful mis-statement by a candidate will invalidate any subsequent appointment obtained.

APPENDIX XX.

Officials and non-officials who furnished written evidence to the Royal Commission in connection with their enquiry into the PUBLIC WORKS DEPARTMENT but who were not orally examined.

1. Rai Bahadur Bakhshi Sohan Lal, Member, Legislative Council, Punjab.
2. Rai Bahadur Lala Kanhya Lal, C.E., Retired Offg. Superintending Engineer, Punjab Public Works Department.
3. F. W. Schönemann, Esq., Superintending Engineer, Public Works Department, Punjab.
4. Lala Kashi Ram, Pleader, Chief Court, Punjab.
5. Rai Bahadur Ram Sarn Das, Member, Punjab Legislative Council.
6. Rai Bahadur Lala Sultan Singh, late Member of the Punjab Legislative Council, Reis and Magistrate, Delhi.
7. Lala Lajpat Rai, Pleader, Chief Court, Punjab, Lahore.
8. Chawalal Pradhan Lala, and two other Temporary Engineers.
9. S. Athim, Esq., A.M.I.C.E., Executive Engineer, Ganges Canal, Rurki.
10. Khan Bahadur Nawab Ashadulla Khan, Meerut.
11. J. W. Meares, Esq., M.I.C.E., Electrical Adviser to the Government of India.
12. Gazetted staff of the Thomason Civil Engineering College, Rurki (other than R.E. officers and officers of the Indian Educational Service).
13. Officers of the Public Works Department, Burma, appointed to the Imperial Branch from the Thomason Civil Engineering College.
14. C. A. Duncan, Esq., Assistant Engineer, Ramgarh, Hazaribagh District, Bihar and Orissa.
15. C. A. Marchant, Esq., Honorary Assistant Engineer, Bihar and Orissa.
16. R. E. Carter, Esq., Superintending Engineer, Orissa Circle, and eight other officers of the Public Works Department in Bihar and Orissa.

APPENDIX XX—*continued.*

17. Lala Sukhbir Sinha, Muzaffarnagar.
18. W. J. Finniston, Esq., Executive Engineer, Bassein, Burma.
19. A. E. P. Rae, Esq., Assistant Secretary, Public Works Department, Burma.
20. The Anglo-Indian Association, Calcutta.
21. Babu K. C. Sen, Assistant Engineer, Sambalpur.
22. E. A. W. Phillips, Esq., M.I.C.E., retired Superintending Engineer, Burma.
23. The Indian Society of Civil Engineers.
24. W. R. Wells, Esq., Executive Engineer, Burma.
25. S. D. Pears, Esq., Superintending Engineer.
26. J. M. Lacey, Esq., Executive Engineer.
27. Fardunji C. Daraporvala, Esq.
28. Vasudeo Rajaram Gupta, Esq., and Chuitaman Sakharam Deole, Esq., Honorary Secretaries on behalf of the Deccan Sabha, Poona.
29. The Bombay Public Works Department, Upper Subordinates' Association, Poona City.
30. P. F. Plomer, Esq., A.M.I.C.E.
31. J. H. Sharpe, Esq., Executive Engineer (Supplementary Notes on his Written Statement, *vide* paragraph 8).
32. Lt.-Col. J. P. Blakeway, R.E., Superintending Engineer, 1st Circle, and four other R.E. officers.
33. Keshavlal S. Sanghani, Esq., Assistant Engineer, Bombay.
34. K. R. Godbole, Esq., Civil Engineer, Poona City.
35. Babu Motilal Ghosh, Editor, Amrita Bazar Patrika, Calcutta.
36. W. McM. Sweet, Chief Engineer, Public Works Department, Assam. Memoranda giving (1) views of a majority of Members of the Department belonging to Assam; (2) his own views.
37. Nanabhai Dayabhai Daru, Esq.

INDEX.

The numbers refer to paragraphs.

Public Works Department.

A.

Administrative posts:
- Absorption into Imperial Service of Provincial Engineers who reach, advocated, *Desenne* 72,004
- Appointments to, should be controlled by Government of India, *Desenne* 72,004, 72,021
- Charges, particulars, *Russell*... 71,266
- Maintenance of British element necessary, *Harrison* 72,603
- Number would have to be increased, if construction staff increased to extent of 10 per cent., *Russell* 71,287

PAY:
- Exchange Compensation Allowance withdrawn and reduction in pay and allowances entailed, *Lewis*, 72,063; *Edge*, 72,112.
- Extension of incremental scale undesirable, *Hope*, 71,323, 71,334; *Cowley*, 71,858.
- Indians and Europeans should receive same, *Desenne* ... ... 72,005, p. 248

Pensions, special service, grant advocated, *Lewis*, 72,065; *Sharpe*, 72,552.

PROMOTION TO:
- no Feeling that only Europeans should be promoted, *Cowley* 71,854
- Indians:
  - should have Chance of being promoted if fit, *Sharpe* 72,578
  - not as Efficient as Europeans, *Harrison* 72,620
  - Fit for grade, *Radhika Narayan* ... 71,770
  - no Limitations to employment of, in theory, but excluded in practice, *Raj Narayan* 71,409
  - Proportion, *Bagley*, 71,402; *Nethersole*, 71,458; *Rose*, 71,534; *Wazir Chand*, 71,570, p. 220; *Baij Nath*, 71,699; *Finnimore*, 71,811.
  - Percentage of officers appointed in England and in India ... ... p. 219, p. 220
  - by Selection as opposed to mere seniority advocated, *Russell*, 71,269; *Dorman*, 72,157.
  - Seniority determining factor, *Russell*, 71,312; *Harrison*, 72,620.
- 33⅓ per cent. held by Indians, *Harrison*, 72,589.
- Transfers from one Province to another, considerable hardship and pecuniary loss caused, *Edge* 72,112, 72,125
- (*see also* Chief Engineers *and* Superintending Engineers.)

Agashe, V. T., evidence of 72,431–9

Age limits (*see under* Recruitment).

Allen, H. N., evidence of 72,478–501

Allowances (*see under* Leave *and* Pay).

Anglo-Indians and domiciled Europeans:
- Civil appointments on Rs. 200 a month and over held by, 1st April, 1913 ... ... p. 268
- Fairly good at work and generally discharge duties satisfactorily, *Russell* 71,302

Annada Prasad Sarkar, Rai Bahadur, evidence of 71,900–25

Assam:
- Administration, memorandum by ... ... p. 243–4

CADRE:
- Additional Executive Engineer required p. 244
- Appointments held outside authorised ... p. 244

Assam—*cont.*

CADRE—*cont.*
- Number of posts in each grade and provision for leave and training ... ... p. 244
- Civil appointments, statement of, on Rs. 200 a month and over, held by Europeans, Anglo-Indians, and Indians, 1st April, 1913 ... p. 271
- Comparison of number of Europeans and Indians, *Raj Narayan* 71,409
- Local allowances drawn ... ... p. 244

(*see also subject headings.*)

Assistant Engineers:
- Allotment of guaranteed posts among colleges, *Heaton* 71,963, 71,985
- Appointment of, in 1911, particulars, *Haines* 72,626, p. 209

EMPLOYMENT ON TEMPORARY TERMS:
- Advocated, *Heaton* 71,964, 71,977, 71,983, 71,996
- not Advocated, *Desenne* 72,029

INDIANS:
- Number of applicants and number appointed, 1905-14, *Haines* ... ... 72,626, p. 212
- Number of qualified candidates and of appointments made, 1911-13, *Haines* ... ... 72,626, p. 211, 72,633
- Provinces from which men came, 1911-13, *Haines* 72,626, p. 211
- Universities in Great Britain at which course taken, 1911-13, *Haines* 72,626, p. 211, 72,638

Larger proportion employed in Irrigation Circle, *Lewis* 72,095

Number, *Lewis* 72,095

Number should be fixed in accordance with number of superior vacancies, *S. N. Banarji* ... 71,885

Professional experience of, at time of selection, 1905-14, *Haines* ... ... 72,626, p. 212

Testimonials required from engineers under whom employed, *Haines* 72,637

Atkinson, Lieutenant-Colonel E. H. de V., evidence of 71,581–624

B.

Bagley, F. R., evidence of 71,356–402

Baij Nath, Rai Bahadur Lala, evidence of 71,693–735

Banarji, Shailendra Nath, evidence of 71,866–99

Baniyas and Vaisyas, civil appointments on Rs. 200 a month and over held by 1st April, 1913 p. 268

Beale, H. F., evidence of 72,362–430

Bengal:

CADRE:
- no Addition required at present ... ... p. 241
- Appointments held outside authorised ... p. 241
- Number of posts in each grade and allowance for absentees ... ... p. 241
- as at Present sanctioned ... ... p. 239

Civil appointments, on Rs. 200 a month and over, held by Europeans, Anglo-Indians, and Indians, 1st April, 1913 ... ... p. 269

Comparison of number of Europeans and Indians, *Raj Narayan*, 71,409; *Finnimore*, 71,812.

Bengal—*cont.*
DIVISIONS:
very Junior men holding charge, *Finnimore* 71,792
Redistribution to make practically equal, not possible, *Cowley* 71,864
Government, memorandum ... ... p. 239–42
Royal Engineers, employment being extended, *Finnimore* 71,786
Temporary engineers, no difficulty with regard to, *Finnimore* 71,785
(see also subject headings.)

Bihar and Orissa:
CADRE:
Appointments held outside authorised ... p. 243
Number of posts in each grade and allowance for absentees ... ... p. 243
Sufficient for normal requirements ... p. 243
Civil appointments, on Rs. 200 a month and over, held by Europeans, Anglo-Indians, and Indians, 1st April, 1913 ... ... p. 270
Comparison of number of Europeans and Indians, *Raj Narayan* 71,409
Government, memorandum ... ... p. 242–3
Training, Provincial Engineer's apprentice, period should be abolished ... ... p. 242
(see also subject headings.)

Bombay:
CADRE:
Appointments held outside authorised ... p. 257
Establishment, and proportion of Europeans and Indians, *Beale* 72,369
Number of posts in each grade and provision for leave ... ... p. 257
Permanent, insufficient and application for increase refused by Government of India, *Beale* 72,365, 72,401
Recruitment to Imperial Service, table, and spasmodic increases ... ... p. 257
Urgent necessity for strengthening, and statement showing sanctioned scale, the actual strength, and proposed strength necessary to meet normal requirements ... ... p. 257–63
Civil appointments, on Rs. 200 a month and over, held by Europeans, Anglo-Indians, and Indians, 1st April, 1913 ... ... p. 269

C.

Cadre:
Actual strength of establishment compared with, *Russell* 71,266
Composition, and Department suffers greatly in efficiency from, *Purves* 71,664, 71,681
more Frequent revision advocated, *Russell*, 71,286, 71,303–4; *Hope*, 71,348; *Raj Narayan*, 71,405; *Nethersole*, 71,434, 71,444, 71,445, 71,454, 71,472; *Rose*, 71,512, 71,522; *Cowley*, 71,830; *Edge*, 72,111; *Dorman*, 72,157; *Howley*, 72,249, 72,261; *Beale*, 72,365, 72,380; *Learoyd*, 72,504, 72,520, 72,527; *Harrison*, 72,585.
Inadequate provision for works under construction, and necessity for considering future demands in advance, *Russell* ... 71,266, 71,307
Only officers promoted to executive rank, should be placed on permanent cadre, *Heaton* 71,977
Reserves for leave and training adequate, *Russell* 71,289
Strength of establishment, method of determining, *Russell* 71,266
Urgency for increasing staff due to class of men now in charge of sub-divisions, *Hope* 71,346
Transfer of Temporary Engineers to *(see under* Temporary Engineers).

Calcutta, special allowances should be given to European officers stationed at, *Finnimore*, 71,774, 71,801, 71,815, 71,821, 71,826; *Cowley*, 71,831, p. 241.

Casualties, comparison between Indian and European officers, *Beale* 72,368, 72,404

Central Provinces and Berar:
Administration, memorandum by ... ... p. 265–8
CADRE:
Appointments held outside authorised ... p. 267
Insufficient and large increase necessary p. 267–8
Number of posts in each grade and provision for leave ... ... p. 267
Civil appointments, on Rs. 200 a month and over, held by Europeans, Anglo-Indians, and Indians, 1st April, 1913 ... ... p. 271
Comparison of number of Europeans and Indians, *Raj Narayan* 71,409
(see also subject headings.)

Charges:
DIVISIONAL:
Appointments should be by selection only, *Hope* 71,326
Control over initial expenditure by officers, *Russell* 71,266
Growth of size, *Russell* 71,266
Increase in number advocated, *Rose*, 71,528; *Baij Nath*, 71,731.
Laying down definitely that fixed proportion should be reserved for Provincial Engineers undesirable, *Learoyd* 72,508
Proportions of sub-divisions to, should not be decreased, *Hope* 71,353
Grading, according to class of work to be performed endeavoured to be put in practice at present, *Russell* 71,319
Re-adjustment, duties of Imperial Engineers could be confined to higher executive and administrative functions, *Sharpe* 72,549
SUB-DIVISIONAL:
Cases known of engineers from England being appointed direct to, *Radhika Narayan* 71,767
Certain number of districts where not held by Assistant Engineers, *Lewis* 72,095
Functions of officers, &c., *Russell* ... 71,266
Maintenance of buildings and roads only kind of work performed in many, *Cowley* ... 71,850
Majority must devolve on upper subordinates, *Russell*, 71,266; *Hope*, 71,350.
Nomination of upper subordinates of class required for, suggested, *Russell* ... 71,287
Ordinary work of officers, but such inferior classes of men being obtained that work had to be done by Executive Engineers, *Hope* 71,349

Chief Engineers:
ONE CLASS ONLY:
Advocated and proposed rates of pay, *Russell*, 71,270, 71,311, 71,513; *Hope*, 71,323; *Pollard-Lowsley*, 71,628; *Cowley*, 71,831, 71,847; *Lewis*, 72,063; *Dorman*, 72,158; *Ellis*, 72,200, 72,216; *Beale*, 72,366; *Learoyd*, 72,505; *Harrison*, 72,586; pp. 236, 248, 267.
no Importance attached to suggestion, *Nethersole* 71,463
Pay, same whether recruited in India or England, *Rose* 71,520
PENSIONS:
Amount, *Annada Prasad* 71,924
no Difference should be made between pension of Superintending Engineer and, *Hope* 71,354
Special, advocated, *Russell*, 71,272; *Annada Prasad*, 71,905; *Ellis*, 72,202, 72,223.
should not be Permitted to retain same appointment for more than 5 years, *Lewis*, 72,062, 72,074; *Learoyd*, 72,504; *Hope*, 71,322, 71,343.
no Provincial Engineer has yet qualified for post, *Craig* 72,104

Civil Appointments, statement of, on Rs. 200 a month and over held by Europeans, Anglo-Indians, and Indians, 1st April, 1913 ... p. 268

Conditions of Service, Imperial:
Constitution of engineers into service under name of "Imperial Engineers" advocated, *Hope*, 71,322; *Raj Narayan*, 71,405; *Nethersole*, 71,433; *Cowley*, 71,830; *Desenne*, 72,004; *Learoyd*, 72,504, 72,510, p. 235.
Cost of site for residence should be fixed without reference to actual cost due to local variations in price of land or to special circumstances, *Desenne* 72,004
no Officer should have promotions or prospects in service affected by report or series of reports which have not been openly or judicially inquired into, *Raj Narayan* 71,405
Particulars, *Russell* 71,269
Present regulations and, satisfactory on the whole, *Bagley*, 71,359; *Nethersole*, 71,428; *Wazir Chand*, 71,562; *Ellis*, 72,199.
not Realised by recruits, *Harrison* 72,613
Table of precedence should be revised, *Hope*, 71,322; *Raj Narayan*, 71,405; *Learoyd*, 72,504.
(*see also* Leave, Pay, &c.)

Conditions of Service, Provincial:
no Officer should have promotion or prospects in service affected by report or series of reports which have not been openly or judicially enquired into, *Raj Narayan* 71,405
Particulars and comparison with conditions of English recruits, *Russell*, 71,269; *Baij Nath*, 71,702; *Hodgkins*, 72,037; *Craig*, 72,096, p. 133–5.
Proposal for getting reports on seniors by juniors who may be working under them, unfair to Indian-trained engineer, *Raj Narayan* ... 71,405
Same as engineers recruited in England advocated, *Raj Narayan*, 71,405; *Purves*, 71,664; *Baij Nath*, 71,696, 71,710; *Radhika Narayan*, 71,738; *S. N. Banarji*, 71,876, 71,895; *Mookerjee*, 71,928; *Jnananjan Saha*, 72,145; *Swaminatha Ayyar*, 72,306; *Framji*, 72,453; *Allen*, 72,480; *Sharpe*, 72,549.
(*see also* Leave, Pay, &c.)

Confidential Reports, *Raj Narayan*, 71,405; *Agashe*, 72,434.

Contracts by private firms, question of, *Russell*, 71,303–4; *R. N. Mookerjee*, 71,941, 71,951, 71,954, 71,959, 71,967; *Lewis*, 72,094; *Ellis*, 72,219, 72,227, 72,241; *Beale*, 72,381, 72,388, 72,392–3, 72,400, 72,405, 72,408, 72,411; *Learoyd*, 72,515, 72,525, 72,533, 72,541.

Coopers Hill College:
Abolition regretted, *Beale* 72,363, 72,412, 72,419
ESTABLISHMENT OF COLLEGE ON SAME LINES:
Advantages of, purely illusory, *Bagley* ... 71,381
Impracticable, *Cowley* 71,828
Number of students exactly corresponded with number of appointments to be filled in India 4 years later for some years, *Russell* ... 71,314
Practical training to men from, given in first year, *Annada Prasad* 71,923
no Restrictions limiting number of admission of Indian students known of, *Framji* ... 72,477

Cowley, F. A. A., evidence of 71,828–65
Craig, J., evidence of 72,096–108

D.

Departmental examination (*see under* Probation and Training).

Deputy Engineers, abolition of Provincial Service advocated and establishment of new service proposed, and particulars, *S. N. Banarji*, 71,874, 71,875, 71,877, 71,886, 71,887; *Annada Prasad*, 71,912, 71,915; *Mookerjee*, 71,932.

Desenne, O. H., evidence of 72,002–34

District Boards:
Government should make stringent rules for appointment of superior engineers and subordinates from qualified students of State-maintained colleges, *S. N. Banarji* 71,880, 71,893
PAY:
Rates higher than Provincial Service, *Hodgkins* 72,054
Received immediately after leaving college, *Annada Prasad* 71,918

Divisional charges (*see under* Charges).

Division into Imperial and Provincial Services:
Abolition advocated, *Bagley*, 71,364; *Raj Narayan*, 71,413; *Nethersole*, 71,441; *Ganga Ram*, 71,451, 71,536, 71,539, 71,553; *Wazir Chand*, 71,566; *Baij Nath*, 71,698, 71,699, 71,707, 71,709, 71,710, 71,723; *Radhika Narayan*, 71,748, 71,753, 71,757, 71,762; *Cowley*, 71,842; *S. N. Banarji*, 71,867, 71,872, 71,874, 71,876; *Annada Prasad*, 71,902; *Hodgkins*, 72,041, 72,044; *Craig*, 72,098; *Edge*, 72,123; *Jnananjan Saha*, 72,146, 72,148; *Dorman*, 72,170, 72,183; *Howley*, 72,259; *Srinivasa Ayyangar*, 72,284, 72,288, 72,290–1; *Swaminatha Ayyar*, 72,311, 72,314, 72,329; *Beale*, 72,384; *Agashe*, 72,431, 72,433, 72,442; *Framji*, 72,458; *Sharpe*, 72,546, 72,547, 72,557; *Earle*, p. 246.
Abolition and establishment of proposed new Service advocated, *Bagley*, 71,376, 71,377, 71,393; *Raj Narayan*, 71,403, 71,410; *Ganga Ram*, 71,539, 71,544, 71,549, 71,552, 71,553, 71,554, 71,558, 71,559; *Wazir Chand*, 71,567, 71,573; *S. N. Banarji*, 71,867, 71,874, 71,875, 71,876, 71,877, 71,885, 71,886, 71,887; *Annada Prasad*, 71,912, 71,915; *Mookerjee*, 71,932, p. 234.
Retention desirable, *Rose*, 71,516, 71,519; *Finnimore*, 71,773, 71,781; *Heaton*, 71,965, 71,976; *Desenne*, 72,008; *Lewis*, 72,066; *Ellis*, 72,203, 72,209–10; *Beale*, 72,369; *Learoyd*, 72,508, 72,509, 72,513; *Harrison*, 72,589, 72,595.

Dorman, W. S., evidence of 72,155–96

E.

Earle, Sir Archdale, K.C.I.E., note by ... p. 245–6

Edge, R. C., evidence of 72,109–41

Electrical Engineering, Indian graduates should be appointed where non-qualified Europeans now employed, *S. N. Banarji* 71,880

Electrical Inspectors, Local Governments' appointments, 1913, and methods, *Haines* ... 72,626, p. 210, 72,635

Ellis, Colonel W. M., evidence of ... 72,197–246

Engineers:
Administrative posts (*see that title*).
Assistant (*see that title*).
Chief (*see that title*).
Demand for, outside Government Service, *Annada Prasad* 71,917
Deputy (*see that title*).
Executive (*see that title*).
Imperial (*see that title*).
Provincial (*see that title*).
Royal (*see that title*).
Superintending (*see that title*).
Temporary (*see that title*).

European element:
Necessity for maintenance, *Harrison* ... 72,603
(*see also under* Administrative posts.)

Europeans, civil appointments on Rs. 200 a month and over held by, 1st April, 1913 ... ... p. 268

Executive Engineers:
Duties, *Ellis* 72,214
Increase in office work by amalgamation of Public Works Accounts Department with Civil Accounts Department, *Lewis* 72,067
Number, *Lewis* 72,095
Particulars regarding ... ... p. 273–4
Pay, special increments should be granted, *Lewis* 72,063, 72,075
Pensions, scale advocated, *Ellis* 72,223
Proportion of Indian-trained engineers having risen to rank of, *Russell* 71,285

F.

Family Pension Fund:
Establishment advocated, *Russell*, 71,292; *Rose*, 71,515; *Hope*, 71,325, 71,338; *Finnimore*, 71,790; *Cowley*, 71,833, 71,844, 71,848, 71,859; *Hodgkins*, 72,048; *Lewis*, 72,068; *Craig*, 72,102; *Edge*, 72,128; *Dorman*, 72,176, 72,193; *Howley*, 72,252, 72,264–5, 72,272; *Srinivasa Ayyangar*, 72,282; *Swaminatha Ayyar*, 72,309; *Learoyd*, 72,507, 72,519; *Harrison*, 72,588, 72,601, 72,615, p. 236.
Not considered necessary, *Jnananjan Saha* 72,152

Finnimore, B. K., evidence of... ... 71,771–827

Foreign service allowance (*see under* Pay, Imperial Service).

Framji, J. S., evidence of 72,450–77

Furlough (*see under* Leave).

G.

Ganga Ram, Rai Bahadur, evidence of 71,535–59

General Provident Fund (*see* Provident Fund).

Griffith, W. M., evidence of 71,244–65

Gwyther, F. E., note by ... ... p. 228–30

H.

Haines, Hermann A., evidence of ... 72,625–41

Harrison, C. S. C., evidence of ... 72,583–624

Heaton, E., evidence of 71,963–2,001

Hindus, civil appointments on Rs. 200 a month and over held by, 1st April, 1913 ... ... p. 268

Hodgkins, F. H., evidence of 72,035–59

Honours list, inadequate recognition in, *Raj Narayan*, 71,405; *Nethersole*, 71,433; *Dorman*, 72,163, 72,178; *Harrison*, 72,591.

Hope, H. J., evidence of 71,320–55

Howley, W. J. J., evidence of... ... 72,247–76

I.

Imperial Service:
Constitution of Service, *Russell* 71,266
Division of Department into Provincial and (*see under* Division into Imperial and Provincial).
European, not in real touch with people of country, *Radhika Narayan* 71,761
(*see also* Conditions of Service, Leave, Pay, &c.)

Indian Christians, civil appointments on Rs. 200 a month and over held by, 1st April, 1913 p. 268

Indians:
Attracted to Engineering more than to Civil Service because free from evil practices of nomination, *Raj Narayan* 71,420
EDUCATED IN ENGLAND:
should be Appointed to Provincial Service, as three years' training insufficient for Imperial Service, *Hope* 71,339
would have to be Appointed to Provincial Service by Secretary of State, *Russell* ... 71,318
Higher classes of Indians not attracted to Public Works Department to same extent as to Provincial Civil Service, *Russell* 71,281
Improvement of relations between Europeans and, chief problem of day, *Radhika Narayan* 71,745

Indians—*cont.*
LIMITATIONS IN EMPLOYMENT OF:
Abolition advocated, *Raj Narayan*, 71,409, 71,424; *Ganga Ram*, 71,539; *Wazir Chand*, 71,566; *Baij Nath*, 71,697, 71,706; *Radhika Narayan*, 71,742; *Finnimore*, 71,777; *S. N. Banarji*, 71,872; *Annada Prasad*, 71,906; *R. N. Mookerjee*, 71,932; *Jnananjan Saha*, 72,146; *Srinivasa Ayyangar*, 72,283; *Swaminatha Ayyar*, 72,310; *Agashe*, 72,438; *Framji*, 72,457; *Sharpe*, 72,553.
should be Retained, *Russell*, 71,273; *Bagley*, 71,363, 71,372; *Nethersole*, 71,432; *Rose*, 71,494; *Cowley*, 71,834; *Heaton*, 71,965; *Desenne*, 72,008; *Hodgkins*, 72,041; *Lewis*, 72,066; *Edge*, 72,115; *Dorman*, 72,161; *Ellis*, 72,203; *Howley*, 72,253; *Beale*, 72,369; *Allen*, 72,482; *Learoyd*, 72,509; *Harrison*, 72,589.
RECRUITMENT:
Confined to Provincial Service advocated, *Russell* 71,279
(*see also* Indians *under* Recruitment, Imperial Service, *and* Recruitment, Provincial Service.)
Relations between European officers and, *Sharpe* 72,555
Report on value, *Beale* ... 72,373, 72,424–30

Irrigation Branch:
Large portion of staff employed on maintenance work, *Hope* 71,350
on Somewhat different footing from other branches, and suffered somewhat from being part of department in which great deal of other work carried on, *R. N. Mookerjee* 71,942
Special allowances should be given to, and suggested scale, *Raj Narayan* 71,406, 71,414

J.

James, W. H., evidence of 72,330–61

Jnananjan Saha, Babu, evidence of ... 72,142–54

K.

Kaiyasthas, civil appointments on Rs. 200 a month and over held by, 1st April, 1913... ... p. 268

Kshatryas, civil appointments on Rs. 200 a month and over held by, 1st April, 1913 ... ... p. 268

L.

Learoyd, H. B., evidence of 72,502–45

Leave, Imperial Service:
ALLOWANCES:
Payment at 15 rupees to pound sterling, when issued in India, advocated, *Rose*, 71,514; *Dorman*, 72,159; *Harrison*, 72,587.
Regulations, *Ellis* 72,201
Scale inadequate and officers cannot avail themselves of furlough due, *Russell*, 71,271, 71,287; *Hope*, 71,324; *Nethersole*, 71,430, 71,477; *Rose*, 71,514; *Cowley*, 71,832; *Desenne*, 72,006; *Lewis*, 72,064, 72,076; *Edge*, 72,113; *Dorman*, 72,159, 72,175, 72,177; *Howley*, 72,251; *Beale*, 72,367; *Learoyd*, 72,506, 72,541; *Sharpe*, 72,551; *Harrison*, 72,587, p. 236.
Extraordinary, regulations *re*, *Ellis* ... 72,201
FURLOUGH:
Amount of, which should count as qualifying service for pension, *Lewis* 72,065
Commutation of full period on half-pay into shorter period on full-pay advocated, *Hope*, 71,324; *Nethersole*, 71,430; 71,448; *Desenne*, 72,006; *Lewis*, 72,064, 72,085; *Ellis*, 72,201, 72,222; *Howley*, 72,270; *Learoyd*, 72,506, 72,518, 72,522; *Sharpe*, 72,551.
Eight years' limit:
should be Granted at any time after completion of eight years' service, *Rose*, 71,514; *Dorman*, 72,159.
Reduction advocated, *Ellis*, 72,201; *Desenne*, 72,006; *Learoyd*, 72,506.
not Regarded as serious hardship, *Edge* 72,126, 72,139
no Useful purpose served by, *Hope* ... 71,324

Leave, Imperial Service—*cont.*

European given more than Indian because serving in foreign country, supposed to require more change on medical grounds, *Nethersole* 71,477
Indian officers do not take much, *Beale*... 72,367
on Medical certificate, regulations, *Ellis* 72,201
without Medical certificate, regulations, *Ellis* 72,201
Private employment during, should not be prohibited, *Learoyd*, 72,506, 72,535; *Hope*, 71,324, 71,342; *Finnimore*, 71,802; *Dorman*, 72,194.
Proportion should be one-fifth of service as against one-fourth, to enable full amount being enjoyed in service of 30 years, *S. N. Banarji* ... 71,878, 71,883
Rule *re* lapse of 18 months since last privilege leave should be relaxed, *Hope*, 71,324; Learoyd, 72,506.
Rule precluding taking of furlough for period of three years since return from last furlough exceeding three months should be modified, *Russell* 71,271
Simplification of rules advocated, *Cowley* 71,832
should be Total amount earned less total amount already taken, *Lewis* 72,064
General rules, *Ellis* 72,201
Long, regulations, *Ellis* 72,201
One set of rules irrespective of source from which recruited advocated, *Atkinson*, 71,581, 71,595; *Cowley*, 71,833; *Dorman*, 72,160; *Harrison*, 72,588; *Beale*, 72,367.
Periods sufficient, *Hope*, 71,324; *Bagley*, 71,361, 71,374; *Rose*, 71,514; *Cowley*, 71,832; *Ellis*, 72,220; p. 236.
Privilege of leaving headquarters on holidays should be allowed as far as possible, *S. N. Banarji* 71,878
PRIVILEGE:
Cumulative period, extension beyond three months advocated, *Russell*, 71,271, 71,306; *Hope*, 71,324; *Raj Narayan*, 71,407; *Nethersole*, 71,430, 71,448; *Rose*, 71,514; *Finnimore*, 71,775; *Cowley*, 71,832, 71,862; *Desenne*, 72,007; *Edge*, 72,113; *Dorman*, 72,159, 72,192; *Ellis*, 72,201; *Howley*, 72,251; *Learoyd*, 72,506; *Sharpe*, 72,551; *Srinivasa Ayyangar*, 72,281; *Swaminatha Ayyar*, 72,308; *Harrison*, 72,587.
Permission to officers to avail themselves of, immediately prior to retirement, and to retire at end without return to duty advocated, *Russell*, 71,271; *Rose*, 71,514; *Cowley*, 71,832; *Dorman*, 72,159; *Ellis*, 72,238; *Howley*, 72,251; *Srinivasa Ayyangar*, 72,281; *Swaminatha Ayyar*, 72,308; *Harrison*, 72,587.
Regulations, *Ellis* 72,201
should be Total amount earned less total amount already taken, *Lewis* 72,064
Rules same as other Services except as regards allowances, *Lewis*, 72,064, 72,091; *Edge*, 72,113; *Dorman*, 72,159; *Howley*, 72,251; *Harrison*, 72,587.
Rules too complicated and require revision, *Ellis* 72,201
Rules now under revision, *Beale* 72,367
Same as Indian Civil Service advocated, *Mookerjee* 71,930
Short, regulations, *Ellis* 72,201
Special, existing rules require no alteration, but allowances should be same as in case of furlough, *Rose*, 71,514; *Dorman*, 72,159; *Harrison*, 72,587.
STUDY:
Advocated, *Russell*, 71,271; *Hope*, 71,324; *Rose*, 71,514; *Cowley*, 71,832, 71,853; *Mookerjee*, 71,932; *Desenne*, 72,006; *Lewis*, 72,064, 72,082; *Edge*, 72,113, 72,126; *Dorman*, 72,159, 72,188; *Ellis*, 72,205; *Howley*, 72,251, 72,263, 72,268–9; *Beale*, 72,367; *Agashe*, 72,438, 72,443; *Learoyd*, 72,506; *Harrison*, 72,587, 72,600, 72,604, p. 235.
not Advocated, *Nethersole* ... 71,465, 71,466
Subsidiary, regulations, *Ellis*... 72,201
Summary of present regulations, *Ellis* ... 72,201
(see also particular posts.)

Leave, Provincial Service:

ALLOWANCES:
Equivalent of amount of English engineers advocated, *Agashe* 72,436
should be Half average emoluments subject to a maximum, *Swaminatha Ayyar* 72,308
Scale, *Beale* 72,367

Leave, Provincial Service—*cont.*

Extraordinary, regulations, *Ellis* 72,201
FURLOUGH:
Extension to four years advocated, *Agashe* 72,436
Indian officers do not take much, *Beale*... 72,367
Proportion should be one-fifth of service, *Finnimore*, 71,775; *S. N. Banarji*, 71,878, 71,883.
Reduction of interval between two furloughs advocated, *Agashe*, 72,436; *Ellis*, 72,201.
Term furlough "due" should be defined, *S. N. Banarji* 71,883
Indian Service rules, under improvement, *Beale* 72,367
on Medical certificate, regulations, *Ellis* ... 72,201
PRIVILEGE:
Cumulative period, extension beyond three months advocated, *Raj Narayan*, 71,407; *Desenne*, 72,007; *Hodgkins*, 72,056; *Ellis*, 72,201; *Srinivasa Ayyangar*, 72,281; *Swaminatha Ayyar*, 72,308; *Agashe*, 72,436.
Permission to officers to avail themselves of, immediately prior to retirement, and to retire at end without return to duty advocated, *Srinivasa Ayyangar*, 72,281; *Swaminatha Ayyar*, 72,308.
Privilege of leaving headquarters on holidays should be allowed as far as possible, *S. N. Banarji* 71,878
Regulations, *Ellis* 72,201
Rules should be left as they are for Indian Service generally, and Europeans in India allowed to have preferential treatment, *Bagley* ... 71,386, 71,395, 71,397
SAME AS FOR ENGINEERS RECRUITED IN ENGLAND:
Advocated, *Hope*, 71,324, 71,337, 71,352; *Raj Narayan*, 71,407, 71,413; *Nethersole*, 71,465; *Ganga Ram*, 71,538, 71,548; *Wazir Chand*, 71,564, 71,574; *Purves*, 71,664; *Baij Nath*, 71,696, 71,704, 71,710; *Radhika Narayan*, 71,740, 71,743; *S. N. Banarji*, 71,895; *Hodgkins*, 72,039, 72,049; *Jnananjan Saha*, 72,145; *Srinivasa Ayyangar*, 72,281; *Swaminatha Ayyar*, 72,308; *Agashe*, 72,442; *Framji*, 72,455; *Sharpe*, 72,551, p. 236.
not Warranted, *Finnimore* 71,827
Same as uncovenanted service generally, advocated, *Bagley* 71,371
Short, rules fair, *S. N. Banarji* 71,878
Study, advocated, *Finnimore*, 71,775, 71,778, 71,827; *S. N. Banarji*, 71,878; *Mookerjee*, 71,932; *Desenne*, 72,006; *Beale*, 72,367; *Agashe*, 72,438, 72,443.
ON URGENT PRIVATE AFFAIRS:
in Instalments advocated, *S. N. Banarji*, 71,883; *Annada Prasad*, 71,904.
Regulations, and considered fair, *S. N. Banarji*, 71,878; *Ellis*, 72,201.
(see also particular posts.)

Lewis, L. W., evidence of 72,060–95

Listed or Prize posts, to be offered to upper subordinates, suggestion, *Raj Narayan* 71,403

Lower Subordinate Service *(see under* Subordinate Service).

Overseers:
Free quarters or suitable house-rent allowance advocated, *S. N. Banarji* 71,877
Pay, scale advocated, *S. N. Banarji* ... 71,877
PROMOTION:
to Deputy Engineer class on supernumerary list with honorary rank advocated, *S. N. Banarji* 71,875, 71,877
to Sub-divisional posts, suggestion, *Heaton* 71,978

Overseers—*cont.*
Recruitment from candidates having passed Overseers' Examination of Technical Board advocated. *S. N. Banarji*... 71,874
Training, system satisfactory, *S. N. Banarji* 71,875

P.

Parsis, civil appointments on Rs. 200 a month and over held by, 1st April, 1913 ... ... p. 268

Pay, Imperial Service:
Bar at Rs. 800 and 1,250, officers reported as fit for promotion but for whom no vacancies exist, should continue to draw increments, *Russell*, 71,270, 71,288, 71,305; *Hope*, 71,323, 71,332, 71,333, 71,345; *Raj Narayan*, 71,406; *Rose*, 71,513; *Finnimore*, 71,795, 71,798; *Cowley*, 71,831; *Lewis*, 72,062; *Edge*, 72,131, 72,141; *Dorman*, 72,158, 72,190; *Ellis*, 72,217; *Howley*, 72,250, 72,262, 72,276; *Beale*, 72,366, 72,382, 72,410; *Learoyd*, 72,505; *Harrison*, 72,586; *Sharpe*, 72,549, 72,550, p. 248.
Basis of market value, impossible, *Nethersole* 71,463
should Depend on training and on work, *Cowley* 71,856
Difference from Provincial rates marked by leave and pension rules advocated, *Bagley* ... 71,370, 71,386, 71,395, 71,397, 71,399
Estimate of expenditure of married officer in executive grades, *Desenne* 72,005, 72,031, p. 120
FOREIGN SERVICE ALLOWANCE:
Anomalies should be guarded against, *Framji* 72,476
Claim can be met adequately by improved leave and pension rules, without any differentiation in actual salaries while on duty, *Bagley* 71,374
should be Given so as to make pay for European in India above what would be received in England, but not above standard in India, *S. N. Banarji* 71,889, 71,898
to Indians recruited in England might be necessary, *Finnimore* 71,796
Question of, difficult to deal with, *Srinivasa Ayyangar* 72,290–1, 72,297
Question whether men could be obtained on terms of receiving pay they would receive in their own country plus compensation allowance for serving in India, *Ellis* 72,226
Higher to Indians recruited in England than to those recruited in India, objection to, *Ottley* 72,657
House rent and allowances, sub-divisional officers stationed elsewhere than at headquarters should receive rent-free quarters, *Lewis* 72,068
Improvements that may be recommended should have retrospective effect, *Sharpe* 72,555
Increment should be made dependent on good work and not lapse into mere matter of course, *Nethersole* 71,428
Incremental scale approved, *Hope*, 71,323; *Srinivasa Ayyangar*, 72,280, p. 236.
Leave allowances (*see under* Leave).
Local allowances, Indian-trained engineers receive two-thirds of that granted to officers obtained from England and injustice, *Baij Nath* 71,703
Payment in sterling at exchange value of two shillings per rupee advocated, *Nethersole* 71,432, 71,447, 71,463, 71,471, 71,476, 71,479
Personal allowances should be given to officers whose promotion is stopped by irregularities in past recruitment, *Nethersole* 71,428
Presidency house-rent and extra emoluments, anomalies and remedy suggested, *Harrison* 72,591, 72,599, 72,606, 72,610, 72,617
Rates in 1890, 1900, and present scale ... p. 227, p. 241–2, p. 243, p. 244, p. 247, p. 253, p. 256, p. 266–7.
Reduction of rates to Provincial Service level not advocated, *Raj Narayan*, 71,419; *Agashe*, 72,447; *Framji*, 72,475.
Same for Indian and English recruits advocated, *Atkinson*, 71,581, 71,595; *Cowley*, 71,843; *R. N. Mookerjee*, 71,929, 71,938, 71,939–40; *Sharpe*, 72,581.

Pay, Imperial Service—*cont.*

Scale adequate, *Bagley*, 71,360; *Radhika Narayan*, 71,739; *S. N. Banarji*, 71,877; *Annada Prasad*, 71,903; *Edge*, 72,124; *Ellis*, 72,200, 72,237; *Sharpe*, 72,550.

Scale revised in 1908, and exchange compensation allowance withdrawn; net increase not commensurate with cost of living, *Russell*, 71,270; *Hope*, 71,323; *Cowley*, 71,831; *Lewis*, 72,063; *Edge*, 72,112; *Dorman*, 72,158; *Howley*, 72,250; *Beale*, 72,366; *Learoyd*, 72,505, 72,519, 72,529; *Harrison*, 72,586, p. 227.

Statement showing comparison of different scales of pay of Royal Engineers and, as revised from time to time, *Pollard-Lowsley* ... ... p. 60

TRAVELLING ALLOWANCES:

Inadequate and revision advocated, *Rose*, 71,518; *Desenne*, 72,004; *Ellis*, 72,205; *Srinivasa Ayyangar*, 72,286; *Swaminatha Ayyar*, 72,312; *Framji*, 72,454; *Learoyd*, 72,504; *Harrison*, 72,591, 72,616.

on Transfer:

Detailed statements of expenses ... p. 254–5

Inadequate and revision advocated, *Hope*, 71,322; *Rose*, 71,518; *Cowley*, 71,836, 71,865; *Desenne*, 72,004; *Lewis*, 72,068; *Edge*, 72,117, 72,130; *Dorman*, 72,163; *Ellis*, 72,205; *Howley*, 72,255; *Srinivasa Ayyangar*, 72,286; *Swaminatha Ayyar*, 72,312; *Beale*, 72,371, 72,386, 72,416–7; *Framji*, 72,454; *Learoyd*, 72,504; *Sharpe*, 72,550, 72,561; *Harrison*, 72,591, 72,602, 72,611, p. 253.

Two incremental scales, one for Assistants and one for Executive Engineers, would militate against recruitment, *Russell* 71,288

(see also particular posts.)

Pay, Provincial Service:

Avoidance of higher paid officer working occasionally under lower paid officer considered impossible, *Russell* 71,316

ON BASIS OF MARKET VALUE:

Advocated, *Harrison* 72,623

Impossible, *Nethersole* 71,463

Bar at Rs. 535, officers reported as fit for promotion but for whom no vacancies exist, should continue to draw increments, *Russell*, 71,270; *Hope*, 71,323; *Raj Narayan*, 71,406; *Cowley*, 71,831; *Beale*, 72,366, 72,382.

Daily allowance, 50 per cent. increase advocated, *S. N. Banarji* 71,877

should Depend on training and on work, *Cowley* 71,856

Discontent might still continue if difference maintained, *Beale* 72,421

Dissatisfaction at distinction from Imperial Service, *Allen* 72,480, 72,490

Grading according to class of work to be performed, endeavoured to be carried out in practice at present, *Russell* 71,319

Higher to Indians serving in different Province from their own, not objected to, *Ellis* 72,234

Inadequate, *Baij Nath*, 71,729; *Hodgkins*, 72,058; *Srinivasa Ayyangar*, 72,294, 72,303; *Beale*, 72,369, 72,385, 72,423; *Sharpe*, 72,564, 72,566.

INCREASE:

Proportionately with other important Services in India, *Raj Narayan* 71,406, 71,412

would Result in better and more contented Service, *Harrison* 72,613

To three-quarters of that of corresponding ranks in Imperial Service advocated, *Desenne* 72,005, 72,027

Local allowances, same as officers recruited in England advocated, *Wazir Chand*, 71,563; *Hodgkins*, 72,042; *Framji*, 72,454.

Non-equality of, with Europeans, grievance not admitted by Indians, *Russell* ... 71,280, 71,318

Present scales satisfactory, *Nethersole*, 71,429, 71,459; *Finnimore*, 71,774, 71,789; *Ellis*, 72,200, p. 241.

PROMOTION OF EXCEPTIONAL ENGINEERS TO IMPERIAL RATES:

Advocated, *Heaton* 71,976

Discontent can be removed by ... ... p. 248

Rates in 1900 and present scale, *Ellis* ... 72,200, p. 227, p. 241–2, p. 243, p. 244, p. 247, p. 253, p. 256, p. 267.

Pay, Provincial Service—*cont.*

SAME AS FOR ENGINEERS RECRUITED IN ENGLAND:

Advocated, *Bagley*, 71,367; *Raj Narayan*, 71,406, 71,413, 71,414, 71,425; *Ganga Ram*, 71,537, 71,546, 71,550, 71,553, 71,558; *Wazir Chand*, 71,563, 71,577; *Purves*, 71,664; *Baij Nath*, 71,696, 71,699, 71,703–4, 71,710, 71,719–21, 71,726, 71,734–5; *Radhika Narayan*, 71,738, 71,739, 71,743, 71,754, 71,756, 71,758, 71,762–3, 71,768; *S. N. Banarji*, 71,872, 71,890, 71,875, 71,877, 71,895; *Annada Prasad*, 71,903, 71,925; *Desenne*, 72,005; *Hodgkins*, 72,038, 72,046; *Jnananjan Saha*, 72,145, 72,151; *Srinivasa Ayyangar*, 72,280, 72,290–1, 72,303; *Swaminatha Ayyar*, 72,307, 72,316, 72,319, 72,323, 72,325, 72,329; *Agashe*, 72,435, 72,442, 72,444, 72,445, 72,447–9; *Framji*, 72,454, 72,451, 72,462, 72,463; *Sharpe*, 72,555, 72,560, 72,567, 72,579.

not Advocated, *Russell*, 71,270, 71,279, 71,316; *Hope*, 71,326, 71,355; *Nethersole*, 71,432, 71,477, 71,471, 71,479; *Rose*, 71,516, 71,519, 71,533; *Cowley*, 71,834; *Lewis*, 72,066; *Dorman*, 72,182–3; *Ellis*, 72,245; *Howley*, 72,253, 72,273; *Beale*, 72,369, 72,389; *Learoyd*, 72,509, 72,513, 72,525, 72,534, 72,538; *Harrison*, 72,589; *Ottley*, 72,657–8, 72,675.

Scale should be made identical with that for Provincial Civil Service, *Sharpe* ... ... 72,550.

Scale sufficient for Indians, *Cowley* ... 71,834

TRAVELLING ALLOWANCES:

Increase advocated, *Srinivasa Ayyangar*, 72,286; *Swaminatha*, 72,312; *Framji*, 72,454.

on Transfer, increase advocated, *Framji* 72,454

Two-thirds of Europe-recruited engineers, and anomalies and defects, *Wazir Chand*, 71,563; *Framji*, 72,454.

(see also particular posts.)

Pensions, Imperial Service:

IMPROVEMENT IN SCALE:

Lengthening of time of service reasonable, *Finnimore* 71,791

should have Retrospective effect, *Hope*, 71,325; *Rose*, 71,515; *Cowley*, 71,833; *Howley*, 72,252; *Sharpe*, 72,555.

Inadequacy, increase advocated, *Russell*, 71,272; *Hope*, 71,325; *Bagley*, 71,362, 71,374; *Nethersole*, 71,431, 71,460, 71,464; *Rose*, 71,515, 71,527; *Radhika Narayan*, 71,741; *Finnimore*, 71,776; *Cowley*, 71,833, 71,845; *Annada Prasad*, 71,905; *Desenne*, 72,007, 72,020; *Lewis*, 72,065; *Edge*, 72,114, 72,138; *Dorman*, 72,160, 72,175, 72,191; *Ellis*, 72,202, 72,218; *Howley*, 72,252, 72,264; *Srinivasa Ayyangar*, 72,282; *Swaminatha Ayyar*, 72,309; *Beale*, 72,368; *Learoyd*, 72,507, 72,519; *Sharpe*, 72,552; *Harrison*, 72,588.

Invalid, scale rendered inoperative by low maximum and increase advocated, *Russell*, 71,272; *Hope*, 71,325; *Rose*, 71,515; *Cowley*, 71,833; *Dorman*, 72,160, 72,196; *Lewis*, 72,065; *Howley*, 72,252; *Learoyd*, 72,507; *Harrison*, 72,588, p. 236.

Memorials of 1907-8, 1912, and 1913 and reply p. 250–2

One set of rules, irrespective of source of recruitment, advocated, *Atkinson*, 71,581, 71,595; *Cowley*, 71,833; *Dorman*, 72,160; *Sharpe*, 72,552; *Harrison*, 72,588.

RATE OF EXCHANGE:

1*s.* 9*d.* for man retiring in England and 1*s.* 4*d.* for man living, after retirement, in India objected to, *Ellis*, 72,239; *Howley*, 72,271.

Rs. 15=£1 advocated, *Sharpe* 72,552

Rules, history, *Dorman* ... ... p. 146–8

System under which part of money in form of pension and part in form of capital sum advocated, *Edge* 72,127

(see also particular posts.)

Pensions, Provincial Service:

Conditions satisfactory, *Finnimore*... ... 71,776

Maximum limit increase advocated, *S. N. Banarji*, 71,879; *Ellis*, 72,202; *Srinivasa Ayyangar*, 72,282; *Swaminatha Ayyar*, 72,309.

Regulations, *Ellis*, 72,202; *Beale*, 72,368.

Rules should be left as they are for Indian Service generally, and European in India allowed to have preferential treatment, *Bagley* ... 71,386, 71,395, 71,397

Pensions, Provincial Service—*cont.*

SAME AS FOR ENGINEERS RECRUITED IN ENGLAND:

Advocated, *Raj Narayan*, 71,408, 71,413; *Wazir Chand*, 71,565, 71,572; *Purves*, 71,664; *Baij Nath*, 71,696, 71,705, 71,710; *Radhika Narayan*, 71,741, 71,743; *S. N. Banarji*, 71,871, 71,890, 71,895; *S. N. Mookerjee*, 71,931; *Hodgkins*, 72,039, 72,051; *Jnananjan Saha*, 72,145; *Srinivasa Ayyangar*, 72,282; *Agashe*, 72,437, 72,442; *Framji*, 72,456.

not advocated, *Finnimore* 71,827

(*see also particular posts.*)

Pollard-Lowsley, Captain H. de L., C.I.E., R.E., evidence of 71,625–62

Poona Engineering College:

ADMISSION TO:

Age on, *Allen* 72,485

Not restricted to statutory natives of India, *Allen* 72,498

Qualifications for, *Framji*, 72,469; *Allen*, 72,484, 72,494.

Advisory Committee, *Framji*... 72,450

Cost of course, *Allen* 72,494

Course, *Framji*, 72,450; *Allen*, 72,486.

Curricula more suited to requirements of Department than many colleges of the United Kingdom, *Framji* 72,452

Entire re-organisation under consideration, *Allen* 72,486, 72,487, 72,488, 72,497

FINAL EXAMINATION:

Course made more comprehensive, and old degree of Licentiate of Civil Engineering converted into that of Bachelor of Engineering... p. 256

Wholly theoretical, *Allen* 72,499

Guaranteed appointment, factors taken into consideration in appointing students... ... p. 255–6

Laboratory fitted up on large and magnificent scale, *Framji* 72,450

List of distinguished engineers from, *Baij Nath* 71,699

Number of appointments should be increased in proportion to requirements of province, *Jnananjan Saha* 72,143

One guaranteed appointment, *Allen* ... 72,482

Perhaps not quite up to Rurki standard, *Allen* 72,495

MUHAMMADANS:

no Special scholarships for, *Allen*... ... 72,494

Two, students at present, *Allen* 72,494

STUDENTS:

Distribution, *Allen* 72,496

Number, *Allen* 72,486

Orders regarding practical course of training p. 256

Subordinate officers have often practically same qualifications as Provincial man, and had only failed by a few marks, *Allen* 72,487

no System of sending students for one year for practical training with private firms, *Allen* 72,500

Upper Subordinates and Provincial Service candidates all drawn from same class, but in future to be given two entirely different courses of instruction, *Framji* 72,450, 72,469

Well up to average of other Indian colleges, *Allen* 72,492

Precedence, table of (*see under* Conditions of Service).

Private work:

on Furlough (*see under* Leave).

taking up by Officers on active service should be strictly limited, *Finnimore* 71,802

Opportunity occasionally given, but encouragement not advocated, *Nethersole* 71,473

Probation and Training, Imperial Service:

Adequate proficiency in Indian languages attained, *Hope* 71,321

Apprenticing to Executive Engineers advocated, *Agashe* 72,433

Care should be exercised in placing newly joined recruits under efficient and sympathetic officers, and on suitable works, *Cowley* 71,829

Probation and Training, Imperial Service—*cont.*

DEPARTMENTAL EXAMINATION:

Considered sufficient, *Hope* ... 71,321, p. 235

Failure to pass, in accounts and engineering after appointment should entail loss of increment and seniority, *Cowley* 71,829

should be Directed to requirements of India, *Bagley*, 71,358, 71,374, 71,387, 71,389; *Raj Narayan*, 71,404; *Wazir Chand*, 71,561, 71,569; *Baij Nath*, 71,695, 71,710, 71,730; *Hodgkins*, 72,036, 72,055; *Edge*, 72,110, 72,133; *Dorman*, 72,184; *Framji*, 72,452.

European engineers should be placed under some specially selected, experienced, and capable Indian Executive Engineer, and Indians under European, *Radhika Narayan* 71,737

European standards of work not considered much superior to those in vogue in good practice in India, *Bagley* 71,374

Examination in reading native accounts might well be dispensed with, *Hope* 71,321

no Facilities given for learning vernacular, and suggestion, *Beale* 72,418

Method of dealing with subordinates and office establishment, necessity for sound training at beginning of engineer's career essential, *Radhika Narayan* 71,737

Officers should be required to pass examination in Law before being given charge of Irrigation or Embankment Division, *Cowley* 71,829

Period should count towards promotion, leave, pension, &c., *Lewis*, 72,065; *Srinivasa Ayyangar*, 72,279.

should be Placed on regular and systematic basis, *Radhika Narayan* 71,737

PRACTICAL:

in British Isles or Europe, and should be made condition of appointment, *Hope*, 71,320; *Rose*, 71,511; *Cowley*, 71,829, 71,840; *R. N. Mookerjee*, 71,926, 71,943; *Edge*, 72,110, 72,119, 72,132; *Dorman*, 72,156, 72,169; *Howley*, 72,248, 72,275; *Harrison*, 72,584, 72,596, 72,624.

in India, should be insisted upon, and free return passages given to rejected candidates, *Russell*, 71,296, 71,308; *Bagley*, 71,358; *Raj. Narayan*, 71,404; *Nethersole*, 71,427, 71,438, 71,451, 71,470; *Rose*, 71,511; *Wazir Chand*, 71,561; *Atkinson*, 71,581; *Baij Nath*, 71,695, 71,701; *Finnimore*, 71,787; *Ellis*, 72,198, 72,208, 72,229; *Desenne*, 72,003, 72,017, 72,028–9; *Hodgkins*, 72,036; *Lewis*, 72,061, 72,071, 72,081; *Craig*, 72,100; *Srinivasa Ayyangar*, 72,278, 72,298, 72,301; *Swaminatha Ayyar*, 72,305; *James*, 72,330; *Framji*, 72,452; *Ottley*, 72,653, 72,662, 72,670–1; p. 235, 246–7.

Indian recruits should be sent to England for, *Atkinson*, 71,581, 71,591, 71,593, 71,624; *Annada Prasad*, 71,901, 71,913; *R. N. Mookerjee*, 71,927, 71,936, 71,939, 71,943, 71,952–3, 71,956–7.

Probationary period not advocated, *Hope*, 71,330; *Bagley*, 71,374; *Finnimore*, 71,772, 71,823; *Cowley*, 71,829, 71,840; *Lewis*, 72,061, 72,071–2; *Edge*, 72,110, 72,119; *Dorman*, 72,156, 72,173; *Howley*, 72,248, 72,257, 72,274; *Beale*, 72,364, 72,419; *Learoyd*, 72,503, 72,516, 72,526; *Harrison*, 72,584; p. 247.

Recruits should be consulted as to class of work desired, with view to specialisation, *Framji* 72,452, 72,466

Recruits should be posted under Indian-trained engineers, *Raj Narayan* 71,405

Sound training in judging subordinates and in arriving at decisions for and against them necessary during period of probation, *Radhika Narayan* 71,737

Specialities in India requiring special study, *Radhika Narayan* 71,760

Stress laid on necessity of making young engineer learn to sympathise with and know people among whom he has to live and work, and to be in real touch with them, *Radhika Narayan* ... 71,737

System, *Russell*, 71,268; *Radhika Narayan*, 71,767; *Ellis*, 72,198; *Beale*, 72,379.

System, advocated, *Learoyd*, 72,503, 72,532; *Sharpe*, 72,548, 72,559, 72,572.

Probation and Training, Imperial Service—*cont.*
TERMINABLE CONTRACT AS ALTERNATIVE:
not Advocated, *Craig*, 72,101; *Dorman*, 72,180, 72,187.
Probationary period, suggestion, *Lewis*, 72,072, 72,078–9, 72,083–4, 72,089–91, 72,095.

Probation and Training, Provincial Service:
APPOINTMENT ON PROBATION:
Advocated, *Raj Narayan*, 71,404; *Finnimore*, 71,772; *S. N. Banarji*, 71,875; *Beale*, 72,364.
no Further period necessary, *Srinivasa Ayyangar* 72,278
Unnecessary, *Jnananjan Saha* 72,144
Capable of improvement, *Ellis* 72,233, 72,235–6
Candidates appointed should be required to qualify for confirmation, *Cowley* 71,828, 71,829
Combination of theoretical and practical impracticable, *Heaton* 71,991
Comparison with English training, *Hope*, 71,339; *Raj Narayan*, 71,404, 71,413; *Ganga Ram*, 71,535; *Baij Nath*, 71,701; *Finnimore*, 71,771, 71,794, 71,811; *Cowley*, 71,856; *Annada Prasad*, 71,919; *Craig*, 72,106; *James*, 72,357; *Beale*, 72,409.
DEPARTMENTAL EXAMINATION:
Further, not advocated, *S. N. Banarji*... 71,875
Officers should be required to pass same, after appointment as Imperial Service Officers, *Cowley* 71,829
IN ENGLAND:
Advocated, *Nethersole*, 71,427, 71,438, 71,443, 71,450, 71,453, 71,466; *Ganga Ram*, 71,543, 71,547; *Radhika Narayan*, 71,753; *Finnimore*, 71,772, 71,787, 71,793, 71,808; *S. N. Banarji*, 71,875; *Desenne*, 72,033; *Jnananjan Saha*, 72,144; *Beale*, 72,397; *Ottley*, 72,680.
not Advocated, *S. N. Banarji*, 71,868, 71,888, 71,897; *Heaton*, 71,973; *James*, 72,343.
on Irrigation works in India, better than could be obtained in Egypt or America, with certain exceptions, *Russell* 71,296
Officers should be put in charge of work, *Bagley* 71,380
Period not counted for promotion and distinction should be abolished, *Wazir Chand*, 71,563, 71,571; *Baij Nath*, 71,703; *Hodgkins*, 72,042; *Srinivasa Ayyangar*, 72,279.
Period too short, and extension advocated, *Heaton*, 71,964, 71,973, 71,981; *James*, 72,346.
PRACTICAL:
One year on large works advocated, *Desenne* 72,003, 72,017
Some students undergo, at own expense, *Annada Prasad* 71,922
should be Raised to highest possible standard, *Russell* 71,300
Rejection of man during period of probation, not known of, *Allen* 72,493
Second year's trial under different officer should be given before final rejection if unfavourable reports received on first year's work, *Raj Narayan* 71,404
Sufficient, *Bagley*, 71,396; *Heaton*, 71,981–2; *Hodgkins*, 72,036; *Jnananjan Saha*, 72,144; *Srinivasa Ayyar*, 72,305, 72,320–2; *Framji*, 72,452, 72,461.
System, *Russell*, 71,268; *Ellis*, 72,198; *Allen*, 72,479.
System of deputing two candidates to one appointment should be abolished, *Hope*, 71,320, 71,331; *Raj Narayan*, 71,404; *Wazir Chand*, 71,561; *Baij Nath*, 71,712; *Atkinson*, 71,617; *Radhika Narayan*, 71,736.
Technical education, certain amount necessary as foundation, but counted as comparatively valueless, *Bagley* 71,379
Visit to engineering works outside country desirable, *Russell* ... ... 71,296, p. 241
Wholly directed to requirements of country, *Wazir Chand* 71,561, 71,569

Promotion, Imperial Service:
Age limit for Assistants should be raised to prevent block in, by proposals for increase in cadre, *Nethersole* 71,478
Confidential qualification reports objected to, *Agashe* 72,434
Economy in carrying out works taken into consideration, *Nethersole* 71,469

Promotion, Imperial Service—*cont.*
Recruitment should be regulated so as to ensure regular flow, *Hope*, 71,322; *Finnimore*, 71,798; *Cowley*, 71,830.
Rules, same for all recruits of whatever race or creed advocated, *Atkinson*, 71,581, 71,595; *Finnimore*, 71,810.
Selection system should be more closely followed, *Rose*, 71,512; *Ottley*, 72,659.
by Seniority, *Finnimore* 71,789, 71,795

Promotion, Provincial Service:
should be Borne on same list as Imperial Engineers, *Rose*, 71,516, 71,519; *Cowley*, 71,834.
Confidential qualification reports objected to, *Agashe* 72,434
to Imperial Service (*see under* Recruitment, Imperial Engineers).
on Merit alone and not on ground of seniority advocated, *Rose*, 71,522, 71,523; *Ottley*, 72,659.

Provident Fund:
Average proportion of salary contributed to, *Russell* 71,292
Government contribution advocated, *Finnimore*, 71,774, 71,789, 71,880, 71,819; *Harrison*, 72,615, p. 241.
should be Made more elastic as regards amount which can be deposited, *Lewis* 72,068
should be Permissible for balance at credit of account to remain for reasonable period after tender of payment has been made, and to continue to draw interest during period, *Cowley*, 71,836; *Dorman*, 72,160; *Harrison*, 72,591.
Replacing of pensions by, in case of new recruits advocated, *Desenne* 72,007, 72,020

Provincial Service:
Absorption of members of present Service into Imperial Service advocated if scheme adopted, *Sharpe* 72,547
no Analogy with other Provincial Services, *Baij Nath*, 71,699, 71,708; *S. N. Banarji*, 71,872; *Framji*, 72,453, 72,459.
Bulk of executive work could be performed by, with suitable re-adjustment of charges, *Sharpe* 72,549
Constitution, *Russell* 71,266
Department would have suffered if, instead of creating, Government had increased recruitment in India and reduced in England, *Russell* 71,312
Dissatisfaction and memorials, history, *Baij Nath* 71,733
Division of Department into Imperial Engineers and (*see under* Division into Imperial and Provincial).
Evils as at present existing, and inevitable result if continued on same lines, *Bagley* 71,367
Failure of experiment, *Radhika Narayan* ... 71,761
History, *Bagley*, 71,367; *Baij Nath*, p. 75–7, 79; *Wazir Chand*, 71,566; *Craig*, 72,096, p. 131–3, p. 233–4, 237–9.
Increase of relative proportion to Imperial Service not advocated, *Russell* 71,273, 71,297
Position compared with that of recruits from England ... ... p. 77–9
Same responsibilities and standard of education as Imperial Engineers not proposed, *Cowley* 71,861
below Standard of Imperial Service, *Hope*, 71,340; *Dorman*, 72,185; *Ellis*, 72,231–2, 72,243–4.
Unpopularity and reasons, *Hodgkins* 72,052–3
(*see also* Conditions of Service, Leave, Pay, &c.)

Punjab:
Civil appointments, on Rs. 200 a month and over, held by Europeans, Anglo-Indians, and Indians, 1st April, 1913 ... ... p. 270
Comparison of number of Europeans and Indians, *Raj Narayan* 71,409
DIVISIONS AND SUB-DIVISIONS:
Number ... ... p. 230–1
Ratio of, should be altered... ... ... p. 232
Government, memorandum ... ... p. 227–8
Jungle allowance ... ... p. 227
IRRIGATION BRANCH:
Cadre:
no Appointments outside, held by Imperial or Provincial Service Engineers... ... p. 228
Estimated requirements ... ... p. 232
Increase to superior staff advocated ... p. 230–2
much below Requirements ... p. 228, p. 232

Punjab—*cont.*
IRRIGATION BRANCH—*cont.*
Cadre—*cont.*
Sanctioned, and provision for leave but not for training ... ... p. 227
Comparative statement showing average area of irrigation per Division and Sub-division and cost of establishment ... p. 230, p. 230–1
Divisions and Sub-divisions:
too Big and should be reduced, *Rose* ... 71,522
Statement showing how they are held at present ... ... p. 230
Executive posts, increase in number advocated, *Rose* 71,522
Number of engineers on deputation ... p. 228
Redistribution of charges advocated ... p. 231–2
Scheme outlined by Government of India, objections and alternatives proposed ... p. 228–9
Statement comparing with United Provinces p. 233
Temporary Engineers:
Date of last occasion of advertisements, *Purves* 71,692
Particulars ... ... p. 228
ROADS AND BUILDINGS BRANCH:
Cadre:
no Addition contemplated at present... p. 228
Sanctioned, and provision for leave but not for training ... ... p. 227
Number of engineers on deputation ... p. 228
Temporary Engineers employed, particulars p. 228
Temporary Engineers, memorials to Lieutenant-Governor of the, and to the Viceroy, with replies and connected correspondence ... ... p. 221–6
Three posts in Central Workshops of Department at Amritsar held by Covenanted Temporary Engineers ... ... p. 228

Purves, R. Egerton, note by ... ... p. 230–3

R.

Radhika Narayan, Lala, evidence of 71,736–70

Railway Department:
Chief Engineers' pay, unfavourable comparison with men in similar position in different parts of world, *Dorman* 72,158
non-qualified Europeans should not be employed on higher pay in preference to qualified Indians, *S. N. Banarji*... ... ... 71,880, 71,893
Probation advocated, *Dorman* 72,156
Recruitment, not necessary to adopt different method from other branches of department, *Bagley* 71,394
Suggestion that permanent cadre should be fixed in accordance with normal rather than minimum requirements, illusory, *Bagley* 71,387
Training, needs no higher theoretical training than needed for work on buildings, roads, and irrigation, *Bagley* 71,375

Raj Narayan, evidence of 71,403–25

Rangoon House Allowance Scheme, should be extended so as to include bachelors and married men whose families are not in Rangoon, *Lewis* 72,068

Recruitment, Imperial Service:
AGE LIMIT:
Present, satisfactory, *Lewis*, 72,060, 72,070; *Dorman*, 72,167.
21-24, advocated, *Cowley* ... ... 71,828, p. 235
22-23, advocated, *Desenne*, 72,018; *Edge*, 72,119.
22-24, advocated, *Hope* 71,320
24 should be maximum, *Learoyd* ... 72,502, 72,530, 72,545
Appointments since 1st January, 1911, and method, *Haines* ... 72,626, p. 209–10, 72,632, 72,635
Average annual, and proportion to Indian Engineering Colleges, *Raj Narayan*, 71,403, 71,409; *Wazir Chand*, 71,560; *Baij Nath*, 71,728; *Finnimore*, 71,812; *Hodgkins*, 72,035, 72,050; *Srinivasa Ayyangar*, 72,277; *Beale*, 72,420; *Agâshe*, 72,432.
no Better plan suggested, *Ottley* 72,653

Recruitment, Imperial Service—*cont.*
CANDIDATES:
should have been at a Recognised engineering college for at least three years, *Hope* ... 71,320, 71,330
should have Resided at least five years in Europe, *Cowley* 71,828, 71,838
CENTRAL COLLEGE:
in England, advocated, *Hope*, 71,330; *Nethersole*, 71,426, 71,436, 71,455, 71,461, 71,475; *Rose*, 71,510; *Finnimore*, 71,772, 71,806; *Desenne*, 72,002, 72,011–15; *Dorman*, 72,155, 72,165; *Beale*, 72,413; *Harrison*, 72,583.
in India:
Advocated, *S. N. Banarji*, 71,886, 71,887; *R. N. Mookerjee*, 71,935, 71,947, 71,955, 71,960, p. 235.
Passed students from colleges should be given further training of two years in, and appointed to Superior Engineering Service as result of competition in final examination, *S. N. Banarji* ... 71,867, 71,868, 71,887
Training of all recruits both English and Indian at, and Rurki obviously fitted for, advocated, *Atkinson* 71,581, 71,591–2, 71,596, 71,602–3, 71,618
Colleges, giving certain number of places to, not practicable, *Ottley* 72,679
Comparison of recruits with those formerly recruited from Coopers Hill College, *Nethersole*, 71,467; *Finnimore*, 71,771, 71,780, 71,805; *S. N. Banarji*, 71,867; *Ottley*, 72,644–51, 72,662.
Comparative attractiveness of the Service, *Ottley* 72,683
COMPETITION:
Advocated ... ... p. 235
from Colleges where result is only attained after course of several years during which practical work is taken into consideration as theoretical, advocated, *Atkinson* 71,581, 71,590, 71,618
Combined with nomination advocated, *Russell*, 71,277; *Ganga Ram*, 71,535, 71,451; *Edge*, 72,119.
Difficulty, *Haines* 72,637
Number of appointments should not exceed one-third of candidates, *Raj Narayan*, 71,404; *Ganga Ram*, 71,536; *Wazir Chand*, 71,560; *Baij Nath*, 71,694, 71,701; *Hodgkins*, 72,036.
Objected to, *Ellis*, 72,207, 72,224; *Learoyd*, 72,531, 72,537; *Harrison*, 72,612, 72,614.
Subjects advocated, *Raj Narayan* 71,403, 71,413
Declaration required from candidates for all appointments ... ... p. 275
DEGREES:
Candidates should be graduates, or B.Sc. in engineering, or A.M.I.C.E.'s, or passed engineers from any Indian Engineering College, *Ganga Ram* 71,535
Honours Degree or diploma of some recognised Engineering College advocated, *Nethersole* 71,426, 71,437, p. 246
Qualifying, extract from regulations *re*, *Haines* 72,626, p. 210, 72,630; p. 239–40, 273
Recognised by Institute of Civil Engineers only, should be accepted, *Cowley*, 71,828, 71,839, 71,849, 71,851, 71,855, 71,857; *Dorman*, 72,168, *Learoyd*, 72,502.
in England and in India, advocated, *Atkinson*, 71,581, 71,597; *Annada Prasad*, 71,900, 71,909; *Jnananjan Saha*, 72,143, 72,148; *Sharpe*, 72,547, 72,557, 72,563, 72,577, 72,582; *Framji*, 72,451, p. 234.
Improvements that may be recommended should have retrospective effect, *Sharpe* 72,555
Indian vernacular suggested as necessary subject, *Swaminatha Ayyar* 72,327
INDIANS:
Candidates, continuous improvement in standard, *Haines* ... ... 72,626, p. 209, 72,639
no Europeans at all would be ideal arrangement, and pay of experts for special occasions to be charged to work concerned, *Raj Narayan* 71,417
in India on recommendation of local governments and administrations, advocated, *Ottley* 72,656, 72,668

Recruitment, Imperial Service—*cont.*

INDIANS—*cont.*

Policy of excluding alumni of Indian Engineering Colleges unjust and should be abandoned, *Craig* 71,706, p. 75, 79, 80, 72,096, 72,097, 72,103, 72,108.

will be Possible to make larger proportion of appointments when terms are made good enough to tempt best class of domiciled European and Anglo-Indian and of Indians to whom kind of service is attractive, *Bayley* 71,357

Proportion, and history of proceedings, *Haines* 72,626, p. 208–9

Provision should be made for training Indians in some special institution recommended for English recruits, *Earle* ... ... p. 245

should be Recruited direct and on equal terms with Europeans, *Earle* ... ... p. 245

should be Residents of province to which they are posted as far as possible, *Earle* ... ... p. 245

Ten per cent. rule:

should be Abandoned, and recruitment in India from Indian colleges substituted, *Hope* 71,329

Absolute exclusion not advocated although recruitment confined to Indian colleges preferred, *James* 72,348

Advantage in Indians going to England, *Howley* 72,266

Alternative of appointment of Provincial Engineers to Imperial Service to extent of 10 per cent. of total recruitment in England, advocated ... ... p. 252

not meant to be Definite limit, but not exceeded in practice, *Haines* 72,629, 72,630, 72,631

Disadvantage in recruiting Indians in England, *Cowley*, 71,828, 71,839; *Learoyd*, 72,502.

Effect on recruitment of Indians, *Haines* 72,629–30, 72,636

should not be Exceeded at present, *Cowley*, 71,834; *Lewis*, 72,066, 72,093; *Edge*, 72,115, 72,121, 72,140; *Dorman*, 72,161; *Howley*, 72,253; *Harrison*, 72,589, 72,594, p. 246.

should Include all qualified men up to age of 30 years and embrace men already serving in Provincial or Subordinate Establishment, *Ellis* 72,197, 72,246

Increase, no objection, *Ellis* 72,273

Indians or Anglo-Indians should have studied at least three years in British Isles and obtained degree from one of recognised British Universities, *Harrison* ... 72,589, 72,594, 72,605, 72,607, 72,621

Limitation objected to, *Radhika Narayan*, 71,736, p. 241; *S. N. Banarji*, 71,874, 71,880; *Annada Prasad*, 71,906; *Dorman*, 72,171, 72,181; *Srinivasa Ayyangar*, 72,277; *Swaminatha Ayyar*, 72,310, 72,314; *Learoyd*, 72,502; *Ottley*, 72,654–7, 72,666–7, 72,675–6.

Men failing for Provincial Service and having got in, heard of, *Edge*, 72,135; *Framji*, 72,452, 72,464.

Method and conditions, *S. N. Banarji* 71,874, p. 239

Necessity of having to go to England a limitation, but unavoidable, *Bagley* ... 71,363

Number of appointments compared with total number of officers so appointed, *S. N. Banarji* 71,874

Objected to, *Russell* 71,278

Open competition, advocated, *S. N. Banarji* 71,874

Particulars regarding certificate of age and nationality ... ... p. 273

and Percentage of total Indian recruitment, *Jnananjan Saha* 72,153

no Reason for not increasing, if candidates of requisite qualifications can be found, *Finnimore* 71,771, 71,777, 71,782, 71,797, 71,816

Record of entrants since 1880 ... ... p. 173

Recruitment in India by local Governments advocated, *James* 72,338 72,353

Reservation of 10 per cent. of vacancies, filled by Secretary of State, for Indians not objected to, *Nethersole*... ... 71,439, 71,481

if Retained, field should be made wider so that when no eligible candidate in England he could be drawn from India, *Dorman* 72,171

no Rule permitting more than 10 per cent. known of, *Ottley* 72,684

Recruitment, Imperial Service—*cont.*

INDIANS—*cont.*

Ten per cent. rule—*cont.*

Rules *re* qualifications recently revised, *Haines* 72,630

Selection from Provincial Service and not by direct appointment either in England or India, advocated, *Ellis*, 72,197, 72,203, 72,209, 72,221, 72,225; *Howley*, 72,258.

Standard of men varies considerably, *Ottley* 72,684

Standard reached by some barely qualified for appointment, *Haines* 72,636

Statistics, *Russell* 71,282

System of scholarships suggested, *Russell* 71,298

Training in India and then sending to England, advocated, *Edge* 72,135

Worst possible system, *Atkinson* ... 71,581

Training in England:

Advocated, *Desenne* ... 72,012–15, 72,034

not Essential, men from Indian Colleges more useful, *Ottley* 72,656, 72,675, 72,681, 72,686

Limitation to Europeans advocated, *Heaton*, 71,963, 71,965, 71,979, 71,997, 72,000–1; *Learoyd*, 72,542.

Madras and Bombay Colleges only given one place each, *Atkinson* 71,619

Method, *Russell*, 71,267; *Raj Narayan*, 71,406; *Wazir Chand*, 71,560; *Baij Nath*, 71,700; *Finnimore*, 71,771; *Hodgkins*, 72,035; *Edge*, 72,109; *Ellis*, 72,197; *Swaminatha Ayyar*, 72,304, 72,317, 72,329; *James*, 72,330; *Framji*, 72,451, pp. 239, 242, 243–4, 246, 252, 255, 265.

Miscellaneous appointments, recruitment, method, *Haines* ... ... 72,625, p. 208

Nomination by Principal of College, who should submit to Selection Committee confidential report on general character and special qualifications of each candidate, advocated ... ... p. 246

Nominations, should be no limit, *Lewis* ... 72,060

Number of applicants and vacancies in certain years, *Ottley* 72,678

OPEN COMPETITION:

Advocated, *Russell*, 71,309, 71,314; *Nethersole*, 71,483; *Wazir Chand*, 71,560; *Radhika Narayan*, 71,736, 71,746; *Annada Prasad*, 71,900, 71,910; *R. N. Mookerjee*, 71,926, 71,943; *Hodgkins*, 72,035; *Agashe*, 72,432.

not Advocated, *Lewis*, 72,092; *Haines*, 72,637.

with no Racial limit, advocated, *Ganga Ram*, 71,535; *Baij Nath*, 71,694, 71,700, 71,710, 71,711, 71,715, 71,722, 71,725; *Radhika Narayan*, 71,736; *R. N. Mookerjee*, 71,926, 71,946; *Jnananjan Saha*, 72,146.

Subjects which should be included in curriculum, *Ganga Ram*, 71,535, 71,555–6; *Wazir Chand*, 71,561, 71,569, 71,580; *Baij Nath*, 71,695, 71,701, 71,722; *Radhika Narayan*, 71,736.

Physical examination, regulations as to ... p. 274–5

not Possible to do away with recruitment of Europeans, and not suggested, *Framji* ... 72,472

Present system satisfactory, *Hope*, 71,320, 71,326, 71,329; *Bagley*, 71,357, 71,381, 71,391; *Cowley*, 71,828, 71,838; *Ellis*, 72,207; *Howley*, 72,247, 72,257; *Learoyd*, 72,502, 72,512, 72,537, p. 266.

PROMOTION FROM PROVINCIAL SERVICE:

Advocated, *Finnimore*, 71,771, 71,781, 71,801, 71,803, 71,818, 71,825; *Heaton*, 71,965, p. 241.

not Advocated, *Sharpe*, 72,547, 72,558, 72,570, 72,575; *Harrison*, 72,622.

too Great reliance should not be placed on, *Earle* p. 245

Proportions advocated, *Russell*, 71,313; *Hope*, 71,326, 71,329; *Bagley*, 71,372, 71,377, 71,388, 71,390, 71,396; *Raj Narayan*, 71,403, 71,413, 71,416; *Nethersole*, 71,432, 71,457; *Rose*, 71,516; *Ganga Ram*, 71,451, 71,535, 71,557; *Wazir Chand*, 71,560; *Atkinson*, 71,594, 71,618; *Baij Nath*, 71,694, 71,700, 71,706, 71,710, 71,711; *Radhika Narayan*, 71,748, 71,757; *Finnimore*, 71,771, 71,803; *Cowley*, 71,834; *S. N. Banarji*, 71,867, 71,872, 71,885; *Mookerjee*, 71,926, 71,932, 71,933, 71,962; *Hodgkins*, 72,035, 72,041, 72,044; *Craig*, 72,099; *Jnananjan Saha*, 72,143; *Srinivasa Ayyangar*, 72,277, 72,283, 72,288, 72,289; *Swaminatha Ayyar*, 72,314 72,329; *Agashe*, 72,432, 72,438; *Framji*, 72,451, 72,457, 72,465, 72,468, 72,473–4; *Learoyd*, 72,508, pp. 234–5, 266.

Recruitment, Imperial Service—*cont.*

Qualifications, advocated, *Lewis*, 72,060, 72,070; *Ottley*, 72,645, 72,647, 72,661, 72,668, 72,669, 72,674, 72,684, p. 235.
Record of entrants since 1880 ... ... p. 173
Recruits on whole satisfactory, but better class would be obtained on lines advocated ... p. 236
Regulations as to appointment of Assistant Engineers ... ... p. 272–5
Royal Engineers (*see that title*).
SELECTION:
must be Accepted as established fact, *Cowley* 71,828
Committee:
Candidates rejected should not be eligible for appointments in subsequent years, *Lewis* 72,060
Constitution advocated, *Hope*, 71,320; *Nethersole*, 71,426, 71,438; *Rose*, 71,510; *Ganga Ram*, 71,535; *Finnimore*, 71,771, 71,807; *Cowley*, 71,828; *Lewis*, 72,060; *Dorman*, 72,155; *Ellis*, 72,197; *Howley*, 72,247; *Beale*, 72,363, 72,375; *Learoyd*, 72,502; *Harrison*, 72,583, 72,612, pp. 235, 240–1, 246.
no Indian member, *Ottley* 72,677
does not make Point of approaching different Engineering Schools, *Ottley* 72,679
Responsible for Railways as well as Public Works Department, *Ottley* 72,682
Continuance of system advocated, *Lewis* 72,060, 72,070, 72,087
no Instances of defects known of, *Russell* 71,314
Special recommendation by Government of India, system, *Haines* 72,641
Supplemented by competitive examination, advocated, *S. N. Banarji* 71,867
System, *Haines* 72,635, 72,641
System faulty in practice, *Raj Narayan*, 71,403; *Framji*, 72,451, 72,464, 72,471.
Tests comparatively high, but not altogether sufficient to prevent certain amount of patronage, *Baij Nath* 71,727
Social qualifications should be treated as very important, *Russell*, 71,277, 71,309; *S. N. Mookerjee*, 71,932; *Lewis*, 72,060, 72,070; *Harrison*, 72,584, p. 246.
Specialists in one branch of engineering should not be barred from entering Service, *Harrison* 72,618
Statistics, *Russell* 71,282
System of series of examinations better than single one, *Beale* 72,414
Temporary Engineers (*see that title*).

Recruitment, Provincial Service:

AGE LIMIT:
22-26, advocated, *Cowley* 71,828
23, advocated, *Desenne* 72,018
Average annual, and comparison with English recruitment, *Raj Narayan*, 71,403, 71,409; *Wazir Chand*, 71,560; *Baij Nath*, 71,728; *Finnimore*, 71,812; *Hodgkins*, 72,035, 72,050; *Srinivasa Ayyangar*, 72,277; *Beale*, 72,420; *Agashe*, 72,432.
FROM COLLEGES:
should be Abolished and men taken straight into upper Service, *Craig*, 72,096 (p. 131–3, 135–6), 72,097, 72,103, 72,108.
Admission at 17, advocated, *S. N. Banarji* 71,886
should be Brought to highest possible standard, *James* 72,338
Central, for all India:
Advocated, *Finnimore*, 71,771, 71,782–3, 71,804, 71,809, 71,824; *Cowley*, 71,828, 71,841; *Heaton*, 71,969, 71,975, 71,992, *Desenne*, 72,002, 72,016, 72,023; *Hodgkins*, 72,035, 72,045; *Edge*, 72,123; *Ellis*, 72,212; *Srinivasa Ayyangar*, 72,289, p. 244.
not Advocated, *Raj. Narayan*, 71,422; *Nethersole*, 71,442, 71,478; *Baij Nath*, 71,713–4, *Radhika Narayan*, 71,747, 71,751; *Annada Prasad*, 71,911, 71,919; *James*, 72,337; *Beale*, 72,395; *Framji*, 72,470; *Allen*, 72,488.
Appointments should still be made on Provincial basis, *Finnimore* 71,817
Desirable, but not called for at present moment, *Bagley* 71,384
Engineers should obtain reduction in fees payable for education of sons, if established, *Desenne* 72,004

Recruitment, Provincial Service—*cont.*

FROM COLLEGES—*cont.*
Central, from all India—*cont.*
would be Good, but divisions in India necessitated more than one Central College, *Russell* 71,301
Certain number of appointments should be given to, in proportion to Public Works Establishments of the particular Provinces, *Bagley* 71,383
should be Confined to training of subordinates, *Atkinson*, 71,581, 71,591; *Finnimore*, 71,771, 71,804.
Co-ordination of work of various, desirable, *Russell* 71,297
Entrance to, should be by selection, combined with qualifying examination, *Hope* ... 71,320
Existing system satisfactory, and with gradual improvements in colleges, general standard of efficiency will be raised, *Harrison* 72,589, 72,593
should be Freely thrown open to Europeans when Imperial Service is again thrown open to Indian students, *Raj Narayan* 71,403
Government doing all possible to raise efficiency, *Russell* 71,313
by Governments directly from, advocated, *Sharpe* 72,547, 72,558
Marks in passing-out examination for riding and proficiency in gymnastics and games which tend to activity of mind and body and a sound physique suggested, *Bagley* 71,368
Requirements of country met, *S. N. Banarji* 71,892
Retention of four colleges, each specialising in separate subject, suggested, *Heaton* ... 71,969, 71,972, 71,992–5
Reversion to older system advocated, *Srinivasa Ayyangar* 72,277, 72,295
Searching medical examination, with particular attention to physical activity and hardiness before applicants allowed to go in for entrance examination, suggested, *Bagley* ... 71,368
Separate course for engineers from subordinates advocated, *Russell*, 71,281; *Hope*, 71,320; *Cowley*, 71,828, 71,841; *Edge*, 72,115, p. 241.
Standard, *Russell*, 71,281; *Bagley*, 71,374; *Raj Narayan*, 71,421, 71,422; *S. N. Banarji*, 71,874; *James*, 72,349; *Ottley*, 72,681.
Technical education given in all colleges about on an equality, *Bagley* 71,384
Theoretical and practical course extending over three years to be terminated by final University examination advocated, *S. N. Banarji* 71,867, 71,868
Unequal from four colleges, and guaranteed posts should be divided proportionately, *Radhika Narayan* 71,736
(*see also particular names of colleges.*)
COMPARISON OF CLASS OF MEN:
with Former class, *Bagley*, 71,378; *Rose*, 71,529.
with Imperial Service, *Radhika Narayan* 71,757
COMPETITIVE EXAMINATIONS:
Marking up papers found necessary, *Nethersole* 71,440
only Practicable system, *Bagley* 71,368, 71,382, 71,391
Declaration required from candidates for all appointments ... ... p. 275
Defects, *S. N. Banarji*... 71,867
no Difficulty in obtaining recruits, *Beale* ... 72,385
Europeans, record of entrants since 1880 ... p. 173
INDIANS:
Percentage, and percentage of total Indian recruitment, *Jnananjan Saha* 72,153
Record of entrants since 1880 ... ... p. 173
Keen competition, *Agashe*, 72,445; *Framji*, 72,461.
Method, *Russell*, 71,267; *Raj. Narayan*, 71,403; *Wazir Chand*, 71,560; *S. N. Banarji*, 71,874; *Hodgkins*, 72,035; *Ellis*, 72,197; *Srinivasa Ayyangar*, 72,277; *Swaminatha Ayyar*, 72,304, 72,318; *Beale*, 72,363, 72,376, 72,394, 72,406; *Framji*, 72,451; *Allen*, 72,478, 72,499, 72,501; pp. 240, 242, 243–4, 246, 252, 255–6, 266.
Nomination, followed by qualifying examination advocated, *Hope* 71,331
should be Open to all British subjects equally, irrespective of caste, colour, or creed, *Jnananjan Saha* 72,146

Recruitment, Provincial Service—*cont.*

PROMOTION OF UPPER SUBORDINATES:

Advocated, *Radhika Narayan*, 71,749; *Jnananjan Saha*, 72,149.

not Advocated in proposed re-organised department, *Agashe* 72,446

has not Attracted best of available men, *Srinivasa Ayyangar* 72,277, 72,302

should be no Bar to Service, *Baij Nath*... 71,716

Early in career as subordinates advocated, *Beale* 72,363, 72,376, 72,399

no Increase advocated, but promotion of exceptional man not objected to, *James*, 72,330, 72,340; *Beale*, 72,406.

not put on Probation, *Beale* 72,364

Objected to, *R. N. Mookerjee*, 71,937, 71,950; *Craig*, 72,108; *Learoyd*, 72,536.

Proportion of recruitment, *Agashe* ... 72,432

Provincial Service entirely manned by, advocated, *Craig* 72,108

Rate, *Ellis* 72,230

Record of entrants since 1880 ... ... p. 173

Reduction desirable, *Russell* 71,283

Stopping of, advocated, and creation of additional grade of Extra Assistant Engineers suggested, *Framji* 72,451, 72,467

System satisfactory, *Desenne*, 72,030; *Ellis*, 72,197.

10 per cent. of, 50 per cent, advocated, *Hodgkins* 72,035

Undesirable, and should form new Provincial Service, *Raj Narayan* 71,403

Proportion advocated, *Russell*, 71,313; *Hope*, 71,326, 71,329; *Bagley*, 71,372, 71,390, 71,396; *Raj Narayan*, 71,403, 71,413, 71,416; *Nethersole*, 71,432, 71,457; *Rose*, 71,516; *Ganga Ram*, 71,451, 71,535, 71,557; *Wazir Chand*, 71,560; *Baij Nath*, 71,694, 71,700, 71,706, 71,710, 71,711; *Radhika Narayan*, 71,736, 71,748, 71,757, 71,764–5; *Finnimore*, 71,771, 71,803; *Cowley*, 71,834; *S. N. Banarji*, 71,867, 71,872, 71,885; *R. N. Mookerjee*, 71,926, 71,932, 71,933, 71,962; *Hodgkins*, 72,035, 72,041, 72,044; *Craig*, 72,099; *Jnananjan Saha*, 72,143; *Srinivasa Ayyangar*, 72,277, 72,283, 72,288–9; *Swaminatha Ayyar*, 72,310, 72,314, 72,329; *Agashe*, 72,432, 72,438; *Framji*, 72,451, 72,457, 72,465, 72,468, 72,473–4; *Learoyd*, 72,508, pp. 234–5, 236.

Record of entrants since 1880 ... ... p. 173

not Restricted to statutory natives of India, *Beale*, 72,396; *Allen*, 72,498.

Restriction imposed on people of one province disabling them from competing for guaranteed appointments in other provinces should be removed, *Srinivasa Ayyangar* 72,286

Selection, system should be adopted, *Rose*... 71,516

System satisfactory and proportion suitable p. 266

Transferred from other Governments, record of entrants since 1880 ... ... p. 173

Relations with other Services:

Amalgamation scheme of Public Works and Civil Accounts recently introduced, but previous system more efficient, *Raj Narayan* 71,411

Improvement desirable, *S. N. Banarji*, 71,873, 71,881; *Srinivasa Ayyangar*, 72,285; *Swaminatha Ayyar*, 72,311.

Independence in relation to other Services should be maintained, *Heaton*, 71,966; *Lewis*, 72,067.

Orders of local administration regarding departments should be dealt with only by Public Works Secretariat, *Desenne* 72,022

Resentment at putting officers under Accountant-General in drawing salaries and travelling allowances, *Raj Narayan* 71,411

Satisfactory, *Russell*, 71,274; *Bagley*, 71,366; *Nethersole*, 71,433; *Rose*, 71,517; *Finnimore*, 71,778; *Cowley*, 71,835; *Annada Prasad*, 71,907; *Desenne*, 72,009; *Lewis*, 72,067; *Edge*, 72,116; *Dorman*, 72,162; *Ellis*, 72,204; *Howley*, 72,254; *Beale*, 72,370; *Harrison*, 72,590.

Serious attempt should be made to equalise conditions of service, Sharpe 72,554

Tendency of Revenue officers to bring Public Works officers under their control, Raj Narayan 71,411

Rendel, Sir A. M., note on his procedure in getting and choosing candidates ... ... p. 211

Retirement:

Comparison between Indian and European officers, *Beale* 72,368, 72,404

COMPULSORY:

for Continued inefficiency, advocated, *Hope*, 71,322; *Cowley*, 71,830; *Ellis*, 72,199, 72,215, 72,220; *Srinivasa Ayyangar*, 72,279; *Swaminatha Ayyar*, 72,306; *Beale*, 72,365, 72,403; *Harrison*, 72,585, p. 235.

at 50, if rank of Superintending Engineer not reached:

Abolition advocated, *S. N. Banarji* ... 71,879

should be Rigidly enforced, *Russell*, 71,269; *Nethersole*, 71,428; *Rose*, 71,512; *Cowley*, 71,830; *Lewis*, 72,062; *Dorman*, 72,157; *Srinivasa Ayyangar*, 72,286; *Swaminatha Ayyar*, 72,306; *Beale*, 72,365; *Harrison*, 72,585.

at 55:

not Considered essential as long as rule made applicable to future entrants and applied to other services, *Russell*... 71,310

should be Rigidly enforced, *Russell*, 71,269, 71,291; *Hope*, 71,322, 71,336; *Rose*, 71,512, 71,525; *Finnimore*, 71,799, 71,820; *Lewis*, 72,062; *Dorman*, 72,189; *Srinivasa Ayyangar*, 72,279; *Swaminatha Ayyar*, 72,306; *Beale*, 72,365; *Learoyd*, 72,504, 72,517, 72,523–4; *Sharpe*, 72,549; *Harrison*, 72,619.

OPTIONAL:

should be Given to officers whose claims for promotion have been continuously overlooked, *Srinivasa Ayyangar*, 72,289; *Swaminatha Ayyar*, 72,306.

Qualifying period should be reduced to 25 years, *Ellis* 72,202

after 20 years' service:

Abolition favoured if better terms were offered in way of pension, *Russell* 71,290

Advocated, *Wazir Chand*, 71,565, 71,572; *Sharpe*, 72,552.

no Case known of, *Beale* 72,407

Few, but no difficulties put in way of anyone who desired to go, and concessions valued, *Russell*, 71,290; *Ellis*, 72,218.

Inducement to men to join department and should be retained, *Lewis* 72,077

Premature, *Nethersole* 71,449

Privilege should be extended to Indians, *Radhika Narayan* 71,755

Roads and Buildings Branch, subject to unfair criticisms, but second to no other in efficiency, *Desenne* 72,009

Rose, F. C., evidence of 71,488–534

Royal Engineers:

Additional expenses of employing, should be charged to Military Department, *Pollard-Lowsley* 71,660

Civil Department obtains considerable advantage by introduction, *Pollard-Lowsley* 71,661

Expenses as compared with Civil Engineers, *Pollard-Lowsley* 71,650, 71,656

General Provident Fund should be open to, *Pollard-Lowsley* 71,631, 71,658

in Irrigation Branch not objected to, but should come in at proper place and in early years of service, *Baij Nath* 71,717

LEAVE:

Civil leave rules, *Pollard-Lowsley*... ... 71,652

Furlough:

Commutation of, part on half-pay into half period on full pay claimed, *Pollard-Lowsley* 71,629

Rule prohibiting officer from taking, till an interval of not less than 18 months since return from privilege leave, should be abolished, *Pollard-Lowsley* 71,629

Privilege:

Rule requiring officer taking, immediately before retirement to return to duty before he retires, should be abolished, *Pollard-Lowsley* 71,629

Rule should be framed to allow accumulation up to maximum of six months, *Pollard-Lowsley*

Officers entering Department after military service, suggestions as to pay and seniority, *Pollard-Lowsley* 71,625, 71,642, 71,643, 71,655

Royal Engineers—*cont.*

PAY:

Bar of Rs. 900 should not apply in case of officer reported as fit to hold charge but for whom no charge is available, *Pollard-Lowsley* ... 71,628

Conditions, *Pollard-Lowsley* 71,628, 71,633–7, 71,654

Consolidated pay equal to civil pay plus net military pay, subject to no limitations claimed, *Pollard-Lowsley* ... 71,628, 71,632, 71,638–40

should not be Different from civilians, *Rose* 71,532

in Military Works Service, statement showing total pay drawn by officer, *Pollard-Lowsley* 71,662, p. 63

Minimum higher than Civil Engineers, *Learoyd* 72,544

Europeans and Anglo-Indians attend, as a rule, and not other colleges, *Allen* 72,482, 72,495

Existing system of open competition for admission to, and for admission from college into service excellent, *Raj Narayan* 71,403

Final examination, marks given for sports and games, *Atkinson* 71,616

Further medical examination before leaving college, *Atkinson* 71,616

General education of students defective, and training inferior to course at Universities in England, which it is recommended recruits should undergo pp. 235–6

as Good practical training given as anywhere, *Atkinson* 71,588–9

Higher mathematics, large proportion of Indian students and very small proportion of Anglo-Indians capable of taking, *Atkinson* ... 71,611

Improvement in training unnecessary at present, *Raj Narayan* 71,422

Indian graduates from, should be nominated for Upper Subordinate Service, *Russell* ... 71,293

Indian students limited to Provinces of Upper India; Bengal, Madras and Bombay excluded, *Atkinson* 71,584

Indians trained at, should be given opportunity of practical work, *Russell* 71,315

List of distinguished engineers from, *Baij Nath* 71,699

LOWER SUBORDINATE CLASS:

Every man should be given year's practical training, *Atkinson* 71,598

no Guaranteed appointments to look to, *Atkinson* 71,598

Particulars, *Atkinson* 71,583

Madras, Bombay and Sibpur Colleges not as well equipped, *Russell*, 71,313; *Atkinson*, 71,619.

not Maintained at all from Imperial funds, entirely supported by Provincial funds, *Atkinson* 71,606

Marking for moral fitness done in negative way, *Atkinson* 71,607

no Means by which students not obtaining Government appointments could get apprenticed at other works, *Atkinson* 71,621

Mechanical engineering, difficult problem to face, *Atkinson* 71,604

Mechanical laboratory at University of Sheffield compared with, *Atkinson* 71,610

Medical test enforced for admission, *Atkinson* 71,616

Men of higher social status desirable, *Atkinson* 71,600, 71,602

Number of appointments should be increased in proportion to requirements of Province, *Jnananjan Saha* 72,143

Practical work apart from laboratory work done entirely outside building, *Atkinson* ... 71,587

Primary reason for establishment, *Russell*... 71,298

Rurki College—*cont.*
Privately managed railways do not utilise to any extent for supply of engineers and mechanics, *Atkinson* 71,608
Provincial Service men from, not so good as men who formerly entered Imperial Service, *Russell* 71,293, 71,312
Qualifications for entry, *Atkinson* 71,585
Recruitment area smaller than other colleges although allotted six posts, *Heaton* ... 71,984
RECRUITMENT FROM:
on Basis of continuous record of marks, *Sharpe* 72,569
Increase in, desirable, *Russell* 71,283
Nomination and competition advocated, *Rose* 71,521
Restrictions on admission not at present existing at other colleges, *Atkinson* 71,619
not Same class of men as formerly, *Russell* 71,312
Smaller number of Europeans entering, than formerly, *Sharpe* 72,569
Social standing of class of Indians going to, satisfactory, *Russell* 71,297
Standard as good as that at Woolwich in certain subjects, *Atkinson* 71,609
Students not wanting guaranteed appointments do not come to, *Atkinson* 71,599
Sufficient amount of practical experience in surveying included, *Bagley* 71,379
Sufficient on intellectual side, but does not train men for practical work as they could be trained in English colleges, *Hope* 71,346
Syllabus not complained of on whole except that it is little too wide, *Nethersole* 71,440
System of appointing two apprentices to each vacancy unsatisfactory ... ... p. 246
should be Thrown open to students from Burma and Assam, *Jnananjan Saha* 72,143
Training provided, particulars, *Atkinson*... 71,586
UPPER SUBORDINATE CLASS:
Certain number of students European soldiers being trained for Military Works Department, *Atkinson* 71,584
Particulars, *Atkinson* 71,583
16 or 17 out of 40 obtained guaranteed appointments yearly and remaining 23 obtained employment somewhere, *Atkinson*... ... 71,598

Russell, R. P.:
Evidence of 71,266–319
Note by ... ... p. 219

S.

Salary (*see* Pay).

Secretariat, not strong enough, *Desenne* 72,025–6

Secretary to Government of India in Public Works Department:
Appointment on Rs. 4,000 advocated, *Russell*, 71,270, 71,311; *Rose*, 71,513; *Pollard-Lowsley*, 71,628; *Cowley*, 71,831; *Dorman*, 72,158; *Harrison*, 72,586.
Local allowance of Rs. 250 as at present, advocated, *Hope*, 71,323; *Learoyd*, 72,505; p. 236.
should be Two secretaries, or post should be given to either branch in rotation ... ... p. 235

Sharpe, J. H., evidence of 72,546–82

Sibpur College:
Admissions should not be increased though number of appointments be increased, *Jnananjan Saha* 72,143
Advanced age at which students qualify for Service, and proposal, *S. N. Banarji*, 71,875, 71,882, 71,891; *Annada Prasad*, 71,901.
Age of admission, reducing, under examination by Bengal Government ... ... p. 241
Bachelor of Science, admissions will be affected by new age regulations of Matriculation Examination of University, *Heaton* 71,963
Bengali students not keen on engineering for its own sake, more interested in trying to obtain Government post, *Heaton* 71,963
Course in some respects much stiffer than old Coopers Hill course, *Annada Prasad* ... 71,919
Distribution of passed-students, *Heaton* ... 71,970
Final examination, *Heaton* 71,989
Four years' course could be reduced with advantage to three years, *Jnananjan Saha* ... 72,143, 72,149

Sibpur College—*cont.*
Guaranteed appointments should be increased to two every year, or to four if Rurki not thrown open to Assam and Burma, *Jnananjan Saha* 72,143
Higher standard of education of boys entering, desirable, *Finnimore* 71,814
Increased patronage would attract larger number of suitable students, *Heaton* 71,964
Keen competition for entrance, *Heaton* ... 71,971
Length of course combined with increase in practical training, created age difficulty, and admission to college over a certain age should be refused, whether B.Sc. read up to or not, *Heaton* 71,988, 71,990, 71,998
Number of recruits for Bengal, Bihar and Orissa should be increased to 50 per cent. of total number of annual recruits, *Jnananjan Saha* 72,143
Number of students admitted yearly and average number passing through, and qualifying at end of four years' course, *Heaton* 71,963
One guaranteed post only, and most of students have to accept posts in Subordinate Services, *Heaton* 71,963, 71,980, 71,985
Particulars, *Heaton* 71,968
Practical and theoretical training should be combined, *Annada Prasad* 71,918, 71,921
Qualification for entrance, *Heaton* 71,988
RECRUITMENT:
Area, *Finnimore*, 71,771; *Annada Prasad*, 71,921; *Heaton*, 71,963, 71,984, 71,986.
Rules for, and schedule of marks ... ... p. 240
System unsatisfactory, *Jnananjan Saha* ... 72,143
REMOVAL TO DACCA:
not Advocated, *Annada Prasad* 71,919
Proposed, and reason, *Finnimore*... 71,809, 71,813
UPPER SUBORDINATE SERVICE STUDENTS:
Course and qualifications, *Heaton* ... 71,974
no Objection to training in same building as engineers, so long as separate lectures given, *Heaton* 71,974
Schedule for competition ... ... p. 240
Training not so good as at Rurki, *Finnimore* 71,813

Sikhs, civil appointments on Rs. 200 a month and over held by, 1st April, 1913 ... ... p. 268

Srinivasa Ayyangar, Avargal, M. R. Ry., R.A., evidence of 72,277–303

Sub-divisional Charges (*see under* Charges).

Subordinate Service:
very few Anglo-Indians, *Ellis* 72,230
Listed appointments as Executive Engineers, advocated, *Srinivasa Ayyangar*... ... 72,286, 72,292
LOWER:
Abolition and replacing by Overseers, advocated, *S. N. Banarji* 71,876
Government should reserve right of dispensing with services of inefficient officers, *Earle* p. 246
Pay:
Conveyance allowance, revision advocated, *S. N. Banarji* 71,877
Rates ... ... p. 248
Rates inadequate and improvement advocated, *Earle* ... ... p. 245–6
Recruitment, method of ... ... p. 246
Standard of admission, *Earle* ... ... p. 245
Many subordinate officers possess Assistant Engineer qualifications, *Heaton* 71,963
RECRUITMENT:
Candidates should be sent to colleges other than Rurki, *Russell* 71,281
Open examination from Provincial Colleges, advocated, *Mookerjee* 71,932
(*see also under particular names of colleges.*)
Training, no improvement necessary, *James* 72,341
UPPER:
College training appreciably lower than that of engineer student, *James*... 72,330
Constitution of, improved, advocated ... p. 234
Creation of Provincial Service for, advocated, *Raj Narayan*, 71,403; *Annada Prasad*, 71,902.
Deputy Engineer Service to replace, advocated, *S. N. Banarji*, 71,876, 71,885; *Agashe*, 72,432.
Designation recommended, *Earle* ... p. 245
Employment in charges which could not be filled by Assistants in Imperial Service, suggested, *Raj Narayan* 71,415, 71,416

Subordinate Service—*cont.*
UPPER—*cont.*
Engineering students failing to obtain appointments in Superior Service accept appointments in, *Finnimore* 71,771, 71,784
Majority of Sub-divisional Charges must devolve on, *Russell* 71,266
Pay:
Conveyance allowance, revision advocated, *S. N. Banarji* 71,877
Improvement should be possible without raising pay of Provincial Service, *Russell*... 71,293
Increments should be subject to stoppage for repeated bad work, *Earle* ... ... p. 245
Rates ... ... p. 248
Scale and improvement advocated, *Earle* p. 245
Personnel stood in need of great improvement, *Baij Nath* 71,716
Power to dispense with services should be given to Local Governments, *Earle* ... ... p. 245
Promotion:
to Rs. 350-550 grade should be by selection, and officers not promoted should be eligible for two increments, *Earle* ... ... p. 245
to Provincial Service (*see under* Recruitment, Provincial Service).
Recruitment:
Method ... ... p. 246
Selection should be limited, *Swaminatha Ayyar* 72,312, 72,314
practical Training after leaving college, *Ellis* 72,213
Working satisfactorily, *Ellis* 72,213
Work, standard, *Craig*, 72,106; *Srinivasa Ayyangar*, 72,296.
(*see also* Overseers.)

Sudras, civil appointments on Rs. 200 a month and over held by, 1st April, 1913 ... ... p. 268

Superintending Engineers:
should be Heads of Departments, *Desenne* 72,004
One class only, advocated, *Edge* ... 72,112, 72,124
PAY:
Incremental scale should be extended to... p. 242
Less drawn than before change in 1908, *Edge* 72,112
Rates advocated. *Hope*, 71,323; *Rose*, 71,513; *Cowley*, 71,831; *Lewis*, 72,063; *Edge*, 72,112, 72,124; *Learoyd*, 72,505; *Harrison*, 72,586, 72,598.
Same whether recruited in India or England, advocated, *Rose* ... ... 71,517, 71,520, p. 266
Time scale advocated ... ... p. 267
PENSIONS:
no Difference should be made between pension of, and Chief Engineer, *Hope* 71,354
Extra, Provincial Engineers should have right to, *Bagley* 71,371
Special, advocated, *Russell*, 71,272; *Annada Prasad*, 71,905; *Ellis*, 72,202, 72,223.
no Provincial Engineer has yet qualified for, *Craig* 72,104
Two classes only, advocated. *Learoyd*, 72,505; *Rose*, 71,513; *Cowley*, 71,831.

Swaminatha Ayyar, Avargal, M. R. Ry., N., evidence of 72,304–29

T.

Temporary Engineers:
Agreements renewed yearly, *Beale* 72,410
Already employed for many years should be taken permanently into service—on separate list—or discharged, *Raj Narayan* 71,405
Appointment, 1913, particulars, *Haines* 72,626, p. 209
not Being permanently connected with service, might show tendency to succumb to temptations more than those on permanent staff, *Nethersole* 71,482
Cadre based on number of superior appointments, *Russell* 71,299
Certain number necessary, *Nethersole*, 71,444; *Rose*, 71,528; *Purves*, 71,682.
Charge of divisions should not be given to, *Hope*, 71,347; *Raj Narayan*, 71,405; *Desenne*, 72,004; *Sharpe*, 72,547.

Temporary Engineers—*cont.*
CONDITIONS OF SERVICE:
Main grievances, summary, *Purves* ... 71,667
Particulars and Declaration Form, *Griffith*, 71,245; *Russell*, 71,266; *Purves*, 71,667, 71,680, pp. 220–1.
should be Regarded as permanent non-pensionable service on incremental scale of pay, *Purves*, 71,668, 71,669, 71,675; *Baij Nath*, 71,699, 71,718, 71,708; *Hodgkins*, 72,042, 72,047; *Jnananjan Saha*, 72,150; *Framji*, 72,459.
Suggested improvements, *Russell*... ... 71,266
Unsatisfactory, *Radhika Narayan* ...
Definition, *Purves* 71,665
Difficulties of dispensing with services, *Russell* 71,266
Difficult to obtain, under existing conditions of pay, *Russell* 71,294
Distinct difference in level of efficiency as between permanent engineer and, *Nethersole* ... 71,468
Duties in Irrigation Department, *Purves* ... 71,691
Employment of great number constituted evil and led to discontent, *Nethersole* 71,468
Employment should be reduced to a minimum, *Hope*, 71,322, 71,347; *Beale*, 72,365; *Learoyd*, 72,502.
Exact position on entering Service not realised until too late, *Purves* 71,676, 71,678, 71,688, 71,689–90
Future appointments should be on understanding of non-appointment to permanent scale, *Rose*, 71,512; *Purves*, 71,668; *Cowley*, 71,830; *Dorman*, 72,157; *Howley*, 72,249; *Swaminatha Ayyar*, 72,306; *Harrison*, 72,585.
no General demand to be brought under General Provident Fund, *Purves* 71,677
Greater security of tenure should be arranged, *Bagley* 71,373
Increase of cadre to absorb all, not possible, *Rose* 71,522
Increase in number of Divisions advocated so that permanent men have no just cause of complaint of introduction, *Purves* 71,668, 71,669, 71,674, 71,683
Increase in permanent cadre and reduction in, advocated, *Nethersole* 71,434, 71,444, 71,445, 71,454, 71,472
should not be Kept in service longer than five years as a rule, *Sharpe* 72,547
to Large extent permanently employed, *Russell* 71,266
LEAVE:
Conditions of, *Griffith* 71,245
Claim to be brought under European service rules, *Beale* 72,367
Rules should be in accordance with uncovenanted service rules generally, *Bagley* 71,373
Length of service, *Purves* 71,672
should be no Limitation in employment of, chargeable to works, *Sharpe* 72,547
Local Governments find increasing difficulty in getting, of as good quality as formerly, *Russell* 71,294
should not be Looked upon as source of recruitment for permanent service, *Lewis* 72,068
Main reason for employment—difficulty of finding sufficient number of upper subordinates qualified for permanent posts, and suggested remedy, *Russell* 71,287
Mechanical, Electrical, Architectural and Sanitary Engineers who are fully qualified and specialised should be given permanency after term of approved service, *Purves* 71,668, 71,669
Memorials of certain Temporary Engineers and connected correspondence, *Purves* 71,668, p. 221–6
Men should be transferred from one Province to another as needed, *Purves* 71,669
Number, *Purves*... 71,671
Number holding executive charge, *Purves*... 71,673
Number should be reduced to requirements of work of purely temporary nature ... ... p. 235
no Objection to admission to proposed new service. *Raj Narayan* 71,416
Organised on quasi-permanent basis and intended to eke out deficiencies of permanent establishment, *Russell* 71,299, 71,304
Particulars *re*, *Bagley*... 71,373
PAY:
Allowances drawn by permanent men claimed 72,366, p. 173

Temporary Engineers — *cont.*

PAY—*cont.*

Claim to 10 per cent. more than permanent men occupying same posts ... ... 72,366, p. 173
Conditions, *Griffith* 71,246
Contribution towards Provident Fund would meet part of demand, *Beale* ... ... 72,366, p. 136
Higher than officer of corresponding rank in Provincial or Imperial Service; reasonable in consideration of being employed on non-pensionable basis, *Russell*... 71,288
on Incremental basis claimed ... 72,366, p. 173
Scale should be at least that of permanent service, *Bagley* 71,373, 71,386
on Still higher basis to enable insurance for pension or contribution to Provident Fund 72,366, p. 173
should be Placed on permanent pensionable scale, by increasing cadre list suitably, *Purves*... 71,668, 71,669, 71,674, 71,683, 71,684
Position occupied, unsatisfactory 71,708
should be eligible for Promotion to higher rank than Assistant Engineer, *Bagley* ... 71,373, 71,386
Prospects of other employment, *Beale* ... 72,398
Provident Fund should be extended to, *Russell*, 71,292; *Bagley*, 71,373; *Harrison*, 72,585, 72,609.
Re-casting of cadre for certain Provinces which have gone far ahead of other Provinces in way of construction works, *Purves* 71,674

RECRUITMENT:

from Indian Colleges advocated, *Hodgkins*, 72,042; *Framji*, 72,458.
Method, and brief history, *Griffith*, 71,244; *Purves*, 71,666.
Method suggested, *Sharpe* 71,708, 72,547
should be Stopped altogether, or should be placed on some regular and systematic basis, *Radhika Narayan* 71,736
Statistics, *Russell* 71,282
Reluctance to employ upper subordinates as subdivisional officers cause of employment of, *Russell* 71,266
Rule of discharge of incompetent, with month's notice fairly strictly carried out, *Bagley* 71,392
Six months' notice of termination of service on either side should be minimum, *Purves* 71,668, 71,669
Some endeavour should be made by Government to secure men employment elsewhere, *Purves* 71,669, 71,687
Statement that work is markedly inferior to that of Permanent Engineers not agreed with, *Purves* 71,685–6
Sufficient number would be obtained in India, if establishment were improved or placed on more permanent footing, *Russell*... 71,294
Suggestion that in lean years there would be no difficulty in lending out to companies entirely illusory, *Bagley* 71,387
Three months' notice claimed, *Beale* ... 72,365

TRANSFER TO PERMANENT CADRE:

Absorption of certain number might be possible, *Nethersole* 71,446
not Advocated as general rule, but hard and fast rule inexpedient, *Beale* 72,363
Arbitrary selection made for transfer of men to permanent cadre, *Nethersole* 71,456
of Best men would in great measure remove present difficulty, *Rose* 71,528

Temporary Engineers — *cont.*

TRANSFER TO PERMANENT CADRE — *cont.*

should be put on Incremental scale of pay, *Learoyd* 72,502
Letters from Government of India to Bombay Government 174–5
on List of Extra-Assistant Engineers before new recruits admitted advocated, *Sharpe* ... 72,547, 72,575
Only possible by placing on list according to relative length of service, *Baij Nath* ... 71,732
Provincial Officers should also have been promoted *Craig* ... 72,096, 72,105, 72,107, pp. 132–3
Reconsideration of position on seniority list claimed, *Beale* ... ... 72,366, p. 173
Refusal by Supreme Government of recommendation of Local Government to appoint certain engineers to Imperial Cadre, *Griffith* 71,247–65
Supersession of permanent engineers should be guarded against, *Rose*, 71,512; *Cowley*, 71,828, 71,830, 71,852; *Dorman*, 72,157; *Ellis*, 72,214, 72,240; *Howley*, 72,249, 72,267; *Srinivasa Ayyangar*, 72,277; *Swaminatha Ayyar*, 72,312; *Beale*, 72,363, 72,403; *Learoyd*, 72,502, 72,514; *Harrison*, 72,585.
should not be Taken permanently into service in which pick of Indian and European colleges are appointed by competition, *Raj Narayan* 71,403
Vacancies should be filled as far as possible by p. 173
Value depends on method of appointment, *Raj Narayan* 71,423
Yearly selection as if service were one of regular sources of recruitment, advocated, *Radhika Narayan* 71,738, 71,752

Training (*see under* Probation and Training).

Travelling allowances (*see under* Pay).

U.

United Provinces of Agra and Oudh:

Civil appointments, on Rs. 200 a month and over, held by Europeans, Anglo-Indians, and Indians, 1st April, 1913 ... ... p. 270

ROYAL COMMISSION

ON THE

PUBLIC SERVICES IN INDIA

RELATING TO THE

POST OFFICE OF INDIA AND TELEGRAPH DEPARTMENT

At Delhi, Monday, 3rd November 1913.

PRESENT:

THE EARL OF RONALDSHAY, M.P. *(in the Chair).*

SIR MURRAY HAMMICK, K.C.S.I., C.I.E.
SIR THEODORE MORISON, K.C.I.E.
MAHADEV BHASKAR CHAUBAL, Esq., C.S.I.
ABDUR RAHIM, Esq.
JAMES RAMSAY MACDONALD, Esq., M.P.

And the following Assistant Commissioners:—

H. N. HUTCHINSON, Esq., I.C.S., Postmaster-General, Punjab.
H. S. STYAN, Esq., Director of Telegraphs, Punjab Circle.

M. S. D. BUTLER, Esq., C.V.O., C.I.E. *(Joint Secretary).*

W. MAXWELL, Esq., C.I.E., M.V.O., Director-General of Posts and Telegraphs in India.

Written statement relating to the Post Office of India.

75,144. **(I.) Methods of Recruitment.**—Recruitment for the posts of Superintendent is effected in two ways, namely:—

(1) by the selection of qualified persons not already in the service of the Department, and

(2) by the promotion of officials from the subordinate ranks of the Department.

In the former case, the person selected is generally required to join as a Probationary Superintendent and is not appointed to the lowest grade of Superintendent until he has shown his fitness in every respect for the position and has passed the prescribed departmental examination. It is necessary, however, on occasion to appoint a non-domiciled European direct to the lowest grade of Superintendent and, when this course is followed, the person selected is placed on probation and is not confirmed until he has justified his selection, and has passed the departmental examination.

In the latter case, the official chosen is permitted to appear at the departmental examination, and if he passes he is eligible for a Superintendentship. When appointed as such, he is placed on probation for an appropriate period, usually a year.

During the last five years 60 officers were appointed permanently as Superintendents, and of these 27 began their service as Probationary Superintendents, and 29 were promoted from the subordinate ranks of the Department, while only four were appointed direct to the Superintendents' grade. During the same period four Probationary Superintendents and one non-domiciled European appointed direct to the grade of Superintendent were found unfit for the position of Superintendent, and were removed from their appointments.

An Indian who seeks admission to the Department as a Probationary Superintendent must as a general rule be a graduate of a recognised university, and in the case of all other candidates for Superintendentships the possession of adequate educational qualifications is insisted on. In all cases regard is paid to social standing and physical fitness.

I am of opinion that the selection of Superintendents should, as in the recent past, continue to be made approximately equally from among outsiders and officials in the subordinate ranks of the Department. There is also, I consider, no objection to the occasional appointment of a non-domiciled European direct to the grade of Superintendent, provided that it is laid down that the person selected cannot move up in the grade until he has passed the Departmental examination and has been confirmed.

Recruitment for the appointments of Postmaster is almost invariably effected by the promotion of officials from the subordinate ranks of the Department, such as sub-postmasters and clerks, who usually start their careers as probationers. The rare exceptions to this rule are the Probationary Postmasters, eight of whom, including five Indians, have been appointed as Postmaster since 1909, in order to improve the personnel in the higher appointments. No alteration is required in regard to the recruitment of Postmasters.

75,145. **(II.) System of Training and Probation.**—Ordinarily a Probationary Superintendent is not allowed to act as a Superintendent until he has had a year's training in the practical work of the Department, that is to say, he performs the actual duties of a Postmaster, accompanies a Superintendent on tour, and is given an insight into the general working of the Department in the office of a Postmaster-General, a Superintendent and a Postmaster. There is, however, no maximum period fixed after which a Probationary Superintendent must, as a matter of course, receive a Superintendentship if he has shown himself to be qualified in every way. During the last three years 16 Probationary Superintendents were permanently appointed as Superintendents, and the average period for which they remained Probationary Superintendents was two years and two months.

O (5)28849 Wt 1800 6/15 E & S

As stated under the head "Methods of recruitment," all persons appointed to the grade of Superintendent are required to serve on probation for an appropriate period, and the minimum period is six months.

I am of opinion that no change is called for in the present arrangements.

As regards Postmasters, I have nothing to add to my remarks under the head "Methods of recruitment."

75,146. **(IV.) Conditions of Salary.**—In paragraph 27 of my predecessor's letter* No. 464-S.G., dated the 13th November 1912, to the Government of India regarding the proposed amalgamation of the Post Office and Telegraph Departments, copies of which have been supplied to the Commission, it has been proposed that the pay of Postmasters-General should be revised as shown below, so as to permit of the withdrawal of Exchange Compensation Allowance and the removal of all distinction between members of the Indian Civil Service and other Postmasters-General, and the abolition of the special rate of pay admissible for one Postmaster-General, 1st grade, if a member of the Indian Civil Service:—

Present.	*Proposed.*
1 on Rs. 2,250—50—2,500.	2 on Rs. 2,500.
3 on Rs. 1,750—50—2,000.	2 on Rs. 2,250.
6 on Rs. 1,500—50—1,750.	3 on Rs. 2,000.
(*plus* Exchange Compensation Allowance in the case of each officer personally eligible).	3 on Rs. 1,750.

The arguments in favour of this proposal are given in the letter referred to and I have no modifications to suggest.

The present rates of pay for Deputy Postmasters-General (including Inspectors-General, Railway Mail Service and Sorting) and Assistant Directors-General do not, in my opinion, require revision.

The recent history with regard to the matter of improving the pay of Superintendents is given at pages 6, 7 and 8 of the Memorandum on the Indian Postal Service that was prepared for the Commission by the Government of India in the Department of Commerce and Industry. The time-scale actually proposed by my predecessor was one under which each Superintendent would rise from a minimum of Rs. 200 to a maximum of Rs. 700 by annual increments of Rs. 20; and I have no objection to its introduction provided that there is an efficiency bar at the Rs. 500 stage.

If, however, the existing system of grades is to be maintained, the following scale would probably be suitable, subject to the condition that promotion to the highest grade should be made solely by selection:—

Grades.	Number of appointments.	Percentage on total.
Rs. 500—25—700	17	10
„ 400—20—500	34	20
„ 300—20—400	51	30
„ 200—20—300	69	40

The great defect in the existing grading is that a Superintendent is required to remain on a fixed pay of Rs. 200 for an indefinite period and again on a fixed pay of Rs. 250 for a similar period. Every Superintendent should, I think, be certain of drawing a pay of Rs. 300 after five years' service, and this would be the case whether the time-scale or the revised grading shown above were adopted. Personally, I would have no objection if the only change made were the substitution of a Rs. 200—20—300 grade for the present grades of Rs. 200 and Rs. 250, the highest pay for a Superintendent remaining at Rs. 600 for some time to come.

Orders have recently been issued raising the minimum pay of Probationary Superintendents to Rs. 100 and I consider that this is sufficient, except in Burma, where there is a special rate of Rs. 150.

The following table compares the grading sanctioned for Postmasters at the present time with that in force in 1907:—

Grades.	Number of appointments in 1907.	Number of appointments at present time.
Pay—Rs.		
1,000—40—1,200	0	2
800—40—1,000	0	1
600—50—1,000	2	0
600—50—900	1	0
600—40—800	0	2
500—20—600	0	5
450—25—600	1	0
400—20—500	3	9
300—20—400	5	11
300—10—350	1	0
300	4	0
250—10—300	7	0
200—20—300	0	32
250	1	0
200—10—250	9	0
200	3	0
150—10—200	28	60
150	20	0
100—10—150	0	58
140	1	0
100—8—140	46	0
120	2	0
100	85	74
80	46	0
70	2	0
Average Pay	Rs. 146·9	Rs. 194

It will be seen that the position of these officials is incomparably better than it was six years ago, and I am of opinion that all that is now required is to effect small improvements in the grading from time to time as the necessity arises, and this is actually done.

75,147. **(V.) Conditions of Leave.**—There are no special leave rules for officers of the Post Office, and it is not necessary, in my opinion, that they should be treated differently in the matter of leave from other uncovenanted officers. I think, however, that the general leave rules need modification in certain respects.

Under the rules as they stand, an officer is eligible for the grant of three months' privilege leave after 33 months' uninterrupted service, and this amount of privilege leave is not increased if the officer remains on duty after the expiry of the 33 months. It seems to me that, while an officer who voluntarily postpones taking the privilege leave that is due to him deserves no special consideration, an officer who is called upon by the Local Government, in the interests of the service, to postpone such leave should be treated more liberally. My suggestion is that in the latter case the officer in question should be allowed to accumulate privilege leave beyond a period of three months, that is to say, the whole of the period for which he is required to remain on duty, over and above the 33 months which rendered him eligible for privilege leave for three months, should be treated as service counting for privilege leave at the accepted rate of one day's leave for every eleven days' service, and that he should be allowed, when his services can be spared, to take the whole of this accumulated privilege leave on full pay either by itself or in combination, if he wishes, with any other leave to which he is entitled under the leave rules.

My second suggestion is that the period of service which an officer subject to the European service leave rules must render before he is eligible for first furlough should be reduced from eight to five years.

* Appendix [illegible] (enclosure).

I also think that the maximum leave allowances prescribed in Articles 314 and 341 of the Civil Service Regulations as admissible under the European and Indian Service Leave Rules, respectively, should be abolished. Having regard to the fall in the value of money both in Europe and in India, it goes without saying that allowances that were considered sufficient twenty years ago cannot possibly be adequate at the present time. Moreover, a very large number of officers serving under both rules take furlough in order to obtain medical treatment in Europe, and on this ground, if on no other, they have a distinct claim for more liberal treatment on Government, who should be a model employer. I understand that at present the covenanted employés of some of the larger mercantile firms in India are treated much more liberally in the matter of leave and leave allowances than Government officers. It seems to me inequitable that the leave allowances of the more senior and, generally speaking, the more efficient, officers should be limited as they are at present, and there is little doubt, I think, that if the rule under which privilege leave can be combined with other leave had not been introduced, the necessity for increasing the maximum leave allowances would have been urged on Government many years ago.

Another respect in which I consider that the present leave rules require alteration is the amendment of the definition of the term "average salary" for the purposes of calculating the leave allowances for furlough. The term "average salary" is defined in Article 16 of the Civil Service Regulations as "the "average of the salary which an officer has earned "during so much of the three years preceding the "day on which he gives up office as he has passed on "duty or on privilege leave."

I consider that the leave allowances for furlough should be not less than half the salary earned by an officer during so much of the *two* years preceding the day on which he gives up office as he has passed on duty or on privilege leave.

75,148. **(VI.) Conditions of Pension.**—There are no special pension rules for officers of the Post Office and it is not necessary, in my opinion, that they should be treated differently in this matter from other uncovenanted officers.

I have only two suggestions to make with regard to the existing general rules and orders relating to pensions. The first is that every officer should be entitled to commute one quarter of his pension for a lump sum *unconditionally*. The present rules lay down, among other things, that an applicant for commutation of pension must undergo a rigorous medical examination and that the Local Government should not only decide whether the commutation would be to the distinct and permanent advantage of the pensioner or his family but should also fix the proportion (not exceeding one-fourth) of the pension that may be commuted so as to leave sufficient to maintain the pensioner in accordance with his station in life after retirement. I am of opinion that, if an officer has earned his pension, he has served Government in full and the fact, for instance, that his health is broken possibly through that very service, is not a sufficient reason for imposing harder terms of commutation upon him. The Government of India do not deal with pensions on the principles of life insurance, and I consider it very desirable that, if the pension system is retained, all officers should be at liberty to commute without conditions of any sort one-fourth of the pensions granted to them on retirement, unless it is possible to introduce in India a system of superannuation allowances and gratuities similar to that prescribed in the English Superannuation Act of 1909 (9 Edw. VII., ch. 10), under which the proportion of annual salary on which the scale of pension is calculated was reduced from one-sixtieth to one-eightieth and the grant of a lump sum equal to one-thirtieth of the annual salary and emoluments of a retiring officer multiplied by the number of years' service rendered was introduced.

My second suggestion is that the exception in Article 644 (*b*) of the Civil Service Regulations, under which a period during which an officer officiates for another officer absent on privilege leave is not permitted to count as service qualifying for additional pension should be abolished. I do not think that the ordinary principle that two officers should not count service in the same appointment should be applied in this case, and I consider it desirable that the whole of the service rendered in a qualifying appointment should count towards the grant of an additional pension. The pension is given for approved service in the appointment, and there should be no distinction between service in a furlough vacancy and service in a privilege leave vacancy.

My own personal opinion is that the pension system should be abolished altogether and replaced by a system of deferred pay which might take the form of payments by Government into an officer's account in the General Provident Fund. The main disadvantage of the pension system is, that if an officer who has completed the period of service qualifying for full pension dies before the pension is sanctioned, or before he has drawn it for a reasonable period, neither he nor his family reap any benefit from the long service rendered by him to Government in the expectation of the receipt of a pension at the end of that service. Other disadvantages are the difficulty of giving effect to a set of rules which must necessarily be complex and, therefore, troublesome; the impossibility of dispensing with the services of an officer who is found to be no longer efficient without inflicting great hardship; the inequality of the system of granting additional pensions to a few selected officers which is in itself more or less a lottery; and the unfairness of limiting the pension of a thoroughly efficient officer who has attained a high position to the same amount as it admissible to an indifferent officer of a much lower standing. The last-mentioned disadvantage is most marked in the case of officers drawing more than Rs. 1,000 at the time of retirement, as from that stage onwards the pension admissible bears absolutely no relation to the average salary of an officer before retirement. Thus the pension admissible to an officer on Rs. 1,500 and an officer on Rs. 900 is exactly the same. The fall in the value of money to which I have already referred in connection with leave allowances must sooner or later be recognized by increasing the scale of pensions, and the whole position will have to be reviewed. It seems to me, therefore, that the time has arrived for considering whether a system cannot be devised which will not present the disadvantages described above and which will enable Government to gauge accurately their liability for non-effective charges.

75,149. **(VII.) Such limitations as may exist in the employment of non-Europeans and the working of the existing system of division of services into Imperial and Provincial.** — In the Post Office there is no division of the kind referred to above and no such division is, in my opinion, necessary. In addition to the appointments of Director-General and of Postmaster-General, ten per cent. of the total number of Superintendentships are open to non-domiciled Europeans because it is considered essential that there should be a leven of such persons in the ranks of Superintendents. With these exceptions, no appointment in the Post Office carrying a pay or minimum pay of Rs. 200 or more can be bestowed on a person who is not a Statutory Native of India, without the special sanction of the Government of India; and the occasions on which such sanction is asked for are very rare. In short, it may be said that, with the few exceptions mentioned above, appointments in the Post Office are practically reserved for Statutory Natives of India, and this, I think, is as it ought to be.

75,150. **(VIII.) Relations of the service with Indian Civil service and other Services.**—The recommendation of the Public Service Commission of 1886–87 was as follows, "That of the seven highest "appointments in the Department at present filled by "Covenanted Civilians, not less than three should "ordinarily be filled by promotion within the Depart-"ment."

In addressing the Secretary of State on the subject of this recommendation, the Government of India expressed themselves in the following terms: "We "accept the proposal to fill three of the seven highest "appointments in the Department by promotion of "departmental officers who do not belong to the "Indian Civil Service, subject to the reservation that "it shall be acted on only when men fit for this pro- "motion are available. The greatest importance is "attached to this reservation, as in view of past "experience and of the nature of the arrangements "under which it is proposed to recruit for the lower "supervising appointments it is considered by no "means improbable that there may sometimes be no "Deputy Postmaster-General, or other officer in the "Department below the rank of Postmaster-General, "fit for promotion to that rank. Indeed, the develop- "ment of the Post Office and the number of points "at which it is now being connected with other "branches of the administration render it perhaps "less likely than formerly that an officer trained "solely in the Department will make a thoroughly "efficient Postmaster-General."

The Secretary of State replied saying that the views expressed by the Government of India had his general concurrence.

The appointment of Director-General has hitherto been conferred on a member of the Indian Civil Service.

There are now ten appointments of Postmasters-General. Four of these are at present held by officers promoted from the ranks of the Department and probably there will soon be five, but the normal number is likely to be four. I am of opinion that it may properly be laid down that four Postmaster-General-ships should be filled by officers of the Post Office whenever men fit in every way to hold the position are available, but I should have no objection whatever if the number were fixed at five, subject to the proviso mentioned.

75,151. **(IX.) Any other points within the terms of reference to the Royal Commission not covered by the preceding heads.**—The only other point which I consider it necessary to bring to the notice of the Royal Commission is a general question relating to the travelling allowance admissible for journeys on transfer.

It is definitely stated in Article 995 of the Civil Service Regulations that travelling allowance is given to officers to cover the actual travelling expenses incurred by them in travelling in the interests of the public service, but under Article 1094 *ibid.* any gazetted officer, or any non-gazetted officer whose salary after transfer exceeds Rs. 400 a month, is allowed on transfer from one station to another only double the fare of the class in which he is entitled to accommodation in the case of journeys by rail, the ordinary mileage allowance in the case of journeys by road, and his bare fare in the case of steamer journeys. I understand that in the United Kingdom, where transfers are few, the rules regulating the grant of travelling allowance on transfer are such that the State bears the whole of the actual expenses incurred by the officer concerned, and although I would not at present propose that Government should bear the whole of the actual expenses incurred by a married officer in breaking up his home at one station and installing himself at his new station, it appears to me to be only equitable that Government should relieve all its officers of a reasonable share of the heavy expenses caused by frequent transfers. The number of transfers in a service like the Post Office in India must of necessity be numerous, and there is no doubt that the present rules operate harshly on married officers and constitute a real grievance especially in the case of officers drawing less than Rs. 1,000 a month.

Under Article 1098 of the Civil Service Regulations, a non-gazetted officer whose salary after transfer does not exceed Rs. 400 a month is, if the transfer is to a station more than 200 miles distant and is made for a period exceeding three months, granted his actual travelling expenses, subject in the case of railway and steamer journeys to a maximum of four full fares of the class of accommodation to which he is ordinarily entitled for himself and his family, three full fares of the lowest class for his servants, and the actual cost of carriage of his personal effects within certain specified maxima; and in the case of journeys by road to three times the ordinary mileage allowance admissible and the actual cost of carriage of his personal effects within the scale laid down for railway and steamer journeys.

I recommend that the condition regarding the minimum distance to be travelled should be expunged from this rule and that the rule as thus modified should be made applicable to all classes of Government officials on transfer.

Written statement relating to the Indian Telegraph Department.

75,152. **(I.) Methods of Recruitment.**—The orders under which recruitment to the superior service of the Indian Telegraph Department has hitherto been regulated are, briefly, that five-eighths of the superior establishment is to be recruited in England by the Secretary of State, one-fourth from the Engineering Colleges and Technical Institutes in India by the Government of India on the nomination of the Director-General, and the remaining one-eighth by the promotion of selected subordinates. These orders are, however, in abeyance at present pending a decision on the proposals for the amalgamation of the Telegraph Department with the Post Office submitted to the Government of India on the 13th November 1912,* copies of which have been supplied to the Commission, and no officers have been appointed to the Imperial Service of the department since 1906 or to the Provincial Service since 1910.

The predominant feature of the scheme of amalgamation is the separation of engineering and traffic work, which is now performed by the same officers. Under the proposals in paragraph 41 of the scheme, practically the whole of the staff of officers required for the superior Traffic Branch will be recruited in India by the promotion of qualified upper subordinates and subordinates of the Telegraph Department, and the prospects of the latter will be incomparably greater than at present. They cannot now rise above Rs. 500 a month whereas, with the creation of a separate Traffic Branch, thirteen appointments ranging from Rs. 800 to Rs. 2,000 a month will be open to them and three-fourths of these appointments will probably be held by promoted subordinates if they are qualified.

The staff of superior officers proposed for the Engineering Branch is very small and it is of the greatest importance that this staff should consist of highly trained and carefully selected electrical engineers. Instead of recruiting about four officers annually for an establishment of ninety-six, recruitment will be limited to the requirements of a staff of only forty-six and, after the claims of the subordinates of the Engineering Branch have been met by the promotion of three of them to the superior grades, it is probable that only two telegraph engineer officers will be required annually. It has been proposed in paragraph 38 of the amalgamation scheme that these should be obtained by the selection by the Secretary of State of one officer yearly in England, the selection by the Goverment of India of one officer every alternate year from an Engineering College or Technical Institute in India, and the promotion every alternate year of a selected subordinate of the Engineering Branch of the Telegraph Department. In this branch also provision has been made for the improvement of the prospects of subordinates and, in addition to the large number of superior appointments in the Traffic Branch for which they will be eligible, subordinates of the Telegraph Department will also be given in the reduced superior engineering establishment the same number of appointments for which they were nominally eligible when the total promotion of subordinates to the superior grades was limited to one promotion every two years.

I do not consider any modification of these proposals necessary or desirable.

* These orders have now been passed—*vide* Appendix I. *See also* Appendix VI.

75,153. **(II.) System of training and probation.**—The existing system of training is summarised in paragraph 39 of the letter* to the Government of India on the subject of the amalgamation of the Telegraph Department and the Post Officer. Owing to the cessation of recruitment it has not been necessary to apply the system for some years, but it has not proved satisfactory in the past and will no longer be suitable if amalgamation is sanctioned. The system of training and probation which I consider should be adopted for the future is stated in detail in paragraphs 39 and 41 of the letter referred to above, and it has been designed with the object of ensuring that only really suitable officers should be retained in the department, either as engineers or as traffic officers.

75,154. **(III.) Conditions of service.**—With the exception of pay and pension, the present conditions of service of superior officers of the Telegraph Department are generally identical with those of the ordinary civil establishments of the State, and I do not consider that any special conditions of service are necessary. It appears desirable, however, to introduce a rule, similar to that in force in the case of the Indian Police, that all officers appointed, either in England or in India, *direct* to the Engineering Branch or the superior Traffic Branch under the arrangements for direct appointments proposed in paragraphs 38 and 41 of the scheme of amalgamation of the Telegraph Department and Post Office, should be liable to removal from the service if they fail to pass the departmental examinations specified in paragraphs 39 and 41 of the amalgamation scheme within the prescribed period, or if, within the same period, they are found unfit for the duties of the service to which they are appointed. It should also be ruled that any officer so removed will, if he was appointed in England, be furnished with a free passage to England provided he utilises such passage within three months from the date of removal.

75,155. **(IV.) Conditions of Salary.**—So far as I am aware, the salaries admissible to superior officers of the Telegraph Department under the resolutions of the Government of India in the Department of Commerce and Industry, No. 913–918–115 and No. 4276—4280–133, dated the 2nd February 1910 and 4th June 1912, respectively (copies of which were furnished to the Commission with the memorandum prepared by the Department of Commerce and Industry), are generally suitable and I have no modifications to suggest beyond those proposed in section III. of the amalgamation scheme. The proposals contained therein include a recommendation that, as the post of Director-General of Telegraphs has been abolished, the pay of the highest appointment in the Engineering Branch of the amalgamated departments, which will in future be the highest ordinarily attainable by a telegraph engineer, should be fixed at Rs. 2,750, partly to compensate officers now serving in the Telegraph Department for the loss of the Director-Generalship and partly to provide reasonably good prospects for telegraph engineers appointed in future. The prospects of the superior officers now in the department and of future entrants will be sufficiently favourable if the proposals referred to above are accepted in their entirety, and I am not in favour of making any other changes. The question of the eligibility of officers of the Telegraph Department for the appointment of Director-General of Posts and Telegraphs is referred to in section VIII. of this memorandum.

75,156. **(V.) Conditions of leave.**—[Mr. Maxwell's recommendations under this heading are identical with his recommendations under the same heading in his preceding Written Statement relating to the Post Office—*see* paragraph 75,147.]

75,157. **(VI.) Conditions of pension.**—The ordinary maximum pension which can be earned by superior officers of the Telegraph Department is the same as for other uncovenanted services, *viz.*, £437–£10–£0 after 25 years' service, but this maximum may be specially increased in certain exceptional circumstances to £525 or £613 in the case of officers appointed in England. In reply to the memorials which were submitted to them in 1908 by the Imperial Service officers of the Telegraph Department the Government of India in the Department of Commerce and Industry stated on the 15th September 1909 that "the question of the "revision of the rates of pension of various services "under Government, including the Telegraph Depart- "ment, is at present under the consideration of the "Government of India; but a considerable time must "elapse before a final decision is likely to be arrived "at on the subject."

There is no great inducement at present for an able officer to remain on in the service after he has earned his maximum pension; but in the past there has not been any marked tendency on the part of Telegraph Department officers to leave the service before they are 55 years of age and are obliged to go under the age clause, and the Provident Fund to which officers of the Telegraph Department are permitted to subscribe places these officers at the time of retirement in a more or less similar position to that in which members of the Indian Civil Service are placed by the contribution made by them towards pension. Recruitment for the superior service of the Telegraph Department has been stopped for some years, and it is not possible to form any well-founded opinion on the question whether the present scale of pensions is sufficiently attractive to induce suitable officers to join, and remain in, the Telegraph Department.

[The remainder of Mr. Maxwell's recommendations under this heading are identical with his recommendations under the same heading in his preceding Written Statement relating to the Post Office—*see* paragraph 75,148.]

75,158. **(VII.) Such limitations as may exist in the employment of non-Europeans and the working of the existing system of divisions of services into Imperial and Provincial.**—In the resolution of the Government of India in the Public Works Department, No. 156 T. E., dated the 25th August 1892, it was laid down, when the Provincial Service for the superior establishment of the Indian Telegraph Department was first formed, that the candidates for appointment to that service should be natives of India as defined in Statute 33, Vict. c. 3, s. 6, and this limitation still holds good. As I have pointed out in section I (paragraph 75,152) of this memorandum, recruitment for the superior establishment of the Telegraph Department is at present suspended. When recruitment is re-opened there will be no limitation in the employment of non-Europeans in the superior Traffic Branch and, except in the case of the very small number of appointments to be made in England which is provided for in paragraph 41 of the amalgamation scheme, vacancies in this branch will be filled by the appointment of selected subordinates of the Indian Telegraph Department whether Europeans or non-Europeans. The majority of the officers selected will naturally be statutory natives of India and I do not consider any restriction desirable.

In the case of the Imperial and Provincial Services of the Engineering Branch the only racial restriction will be that candidates for the latter service should be statutory natives of India. Non-Europeans will be eligible for selection in England by the Secretary of State for appointment to the Imperial Service provided they have received the particular training which will be specified by the Government of India when they request the Secretary of State from time to time to make appointments to this service, and domiciled Europeans will be eligible for appointment to the Provincial Service provided they are statutory natives of India and have received a suitable professional training.

As regards the working of the existing system of division of the superior establishment into Imperial and Provincial Services, I would invite attention to paragraph 18 of the resolution of the Government of India in the Department of Commerce and Industry, No. 913–918–115, dated the 2nd February 1910, referred to in chapter III. of the memorandum prepared for the Commission by the Department of Commerce and

* *Vide* Appendix I. (enclosure).

Industry. The officers recruited for the Provincial Service in the past were not selected with special reference to their suitability for the Telegraph Department and had not as a whole received the technical education and training which will be demanded from candidates for the Provincial Service of the Engineering Branch when recruitment is re-opened. This will, however, be remedied under the new system of nomination by the Director-General, and I do not consider that there will be any difficulty in selecting suitable candidates in India to fill the single direct appointment to the Provincial Service every alternate year which has been proposed in paragraph 38 of the amalgamation scheme. As I have already stated in other sections of this memorandum I do not consider it necessary to make any changes in the pay or general conditions of service of the Provincial Service of the Telegraph Department.

75,159. **(VIII.) Relations of the Service with the Indian Civil Service and other Services.**—There is, I believe, a feeling among a number of the officers of the Telegraph Department that their prospects have been materially injured by the decision that an officer outside the Telegraph Department should hold charge of the department and there is naturally some resentment that this officer should have been a member of the Indian Civil Service. No orders have, however, been passed that the appointment of Director-General of the amalgamated department of Posts and Telegraphs should invariably be held by a member of the Indian Civil Service and there is no reason, so far as I am aware, why at any time in the future the appointment should not be filled by an officer of the Telegraph Department if he is considered fit for it and is the most suitable person available.

So far as I am aware, the relations of the officers of the Indian Telegraph Department with other services are quite satisfactory and I have no remarks to offer in this connection.

75,160. **(IX.) Any other points within the terms of reference to the Royal Commission not covered by the preceding heads.**—[Mr Maxwell's recommendations under this heading are identical with his recommendations under the same heading in his preceding Written Statement relating to the Post Office—*see* paragraph 75,151.]

Mr. W. MAXWELL called and examined.

75,161. (*Lord Ronaldshay.*) The witness said that he joined the Indian Civil Service in the year 1891 and served about nine years in Lower Bengal, entering the Post Office as Postmaster-General. He had been on special duty twice in regard to Telegraph matters, once in connection with the Amalgamation scheme and again on the Telegraph Committee. For a short time, in the year 1908, he acted as Secretary in the Finance Department, and in 1909–10 was Secretary in the Department of Commerce and Industry. In February last he took over the appointment of Director-General of Posts and Telegraphs from Sir Charles Stewart Wilson, having already acted for about nine months in the year 1908 as Director-General of Posts. A despatch on the subject of the Amalgamation scheme had recently been sent to the Secretary of State, and he understood that practically no modification had been made in the proposals submitted to the Government of India. Care had been taken to safeguard the interests of all officers. The appointment of Director-General of Telegraphs would disappear from the cadre, but he presumed the joint appointment of Director-General of Posts and Telegraphs would be open to the whole Service. In the Telegraph Department, so far as the subordinates were concerned, he considered that much greater prospects would be open to them. Any apprehensions which might exist with regard to the scheme he believed to be groundless, so far as the officers in the Service were concerned.

75,162. The Post Office side of the department would be recruited in India as it had been up to the present; there was no proposal to alter anything with regard to the Post Office. On the Telegraph side there would be two sections, one for engineering work containing a strong element recruited in England; and the other for traffic work, mainly recruited in India. About one-fourth of the latter would be recruited direct, and three-fourths by promotion from the subordinate ranks. Again, on the Post Office side there would be one single Service as at present, whilst on the Telegraph side the Superior Service would be divided into an Imperial and a Provincial Branch. It was proposed to reduce the proportion of the Imperial Branch by one-eighth, the present proportion being five-eighths. The Provincial Branch of the Telegraph Service would run parallel to the Imperial Service; it would not be an inferior service in any way. The duties would be precisely the same, the only difference being that the officers in the Provincial Service would receive two-thirds of the pay of the officers in the Imperial Service, on the ground that their expenses were not so great.

75,163. With regard to the Post Office of India, there were five Postmasters in the larger cities who drew salaries at special rates, which approximated to those of officers holding administrative rank. Below that came the first class or gazetted Postmasters, and below that the second class or non-gazetted Postmasters. The dividing line between the first class and the second class was a salary of Rs. 300, those drawing over that amount being gazetted and those drawing under non-gazetted. The number of first class officers was fixed with reference to the work of particular offices, and the pay of each office similarly depended on the volume of its work as was the case in the United Kingdom.

75,164. With regard to recruitment for the higher appointments of Postmaster until recently all officers had passed ordinarily through the lower ranks, but in the last four or five years the experiment had been tried of appointing a few men from outside at Rs. 150 rising to Rs. 200; it was not possible however to say yet whether the experiment had been justified. The change was made owing to the difficulty, which was occasionally experienced, of finding really efficient officers for the appointments. There was in practice an efficiency bar at the Rs. 500—Rs. 600 grade. Although it was not laid down in the rules, cases at that stage were very carefully scrutinised. For the highest appointments, that of Postmasters of the big towns, there was again selection. Twenty-five was the usual age limit for recruitment, but as a rule the men came in at about 21 or 22. The majority of Postmasters entered as subordinates, and the matriculation standard was generally the test. Men, however, who were brought in on the Rs. 150 to Rs. 200 grade were expected to have higher qualifications, some of them being graduates. The selection of the recruits was made by the Postmaster-General, who submitted the nominations to the Director-General, and frequently the latter saw the men himself. The men were on probation for a considerable time before being permanently appointed. Practically all Postmasters entered through the subordinate grade, being appointed as vacancies occurred. The work was gradually becoming more complex, and better men were needed than in the past. He did not advocate going any further than making an occasional appointment of an outsider, as if too many were appointed in the higher grades it would tend to lower the quality of the men who came in in the lower grades. He did not think it would be desirable to make a distinction between first class and second class Postmasters, with a view to recruiting a certain proportion of the former by direct appointment, because he thought the men who came in direct would probably be above their work. The highly educated man as a rule did not care for a Postmastership.

75,165. With regard to the distinction between Postmasters and Superintendents, postmasters as a rule were in charge of one large office in a big town, while the Superintendent was in charge of a large area,

probably extending over a couple of districts. The function of the Superintendent was the inspection and control of many offices, while the Postmaster's function was the direct control of one office. It could happen that a higher paid Postmaster might be inspected and reported upon by a lower paid Superintendent, but the inspection in such a case was confined practically to audit work and there was not in practice much friction. A Postmaster could become a Superintendent, but that did not often happen and was not encouraged, because the duties of the two classes were quite different. Superintendents were recruited to a certain extent from Postmasters, but not largely. The subordinates who became Superintendents were more frequently Inspectors, *i.e.* Assistants to Superintendents. Generally speaking, the two branches were kept in separate watertight compartments. The five prize Postmasterships had been occasionally filled in the past by Superintendents when it was thought there was no man of the right stamp amongst the Postmasters, but that was avoided as far as possible.

75,166. With regard to the large preponderance of Europeans and Anglo-Indians in the higher grades of Postmasters, he though that was due to the fact that in the past Indians were not recruited nearly so freely as was the case now. In the year 1893 out of 35 such appointments only 8 were held by indians, but now there were 34 out of 76. As a rule, highly educated Indians were not very anxious to take up Postmasterships, they preferred a Superintendent's appointment. The large preponderance of Anglo-Indians and Europeans in the higher grades of the Postmaster's branch would tend to decrease, though not perhaps very rapidly. There were certain places where it was desirable to have an Anglo-Indian or European, as, for instance, military stations. He had heard no complaint on the part of the Indian public on the subject.

75,167. Turning to the Superintendents, the witness said that officers of that rank were appointed partly directly and partly by promotion from the lower ranks. Recruiting was derermined by the number of vacancies likely to occur. The number of Superintendents in a circle was about 18 to 20 and probably there would be 2 vacancies in 5 years, and arrangements were made accordingly. Direct recruits were seen by the Postmaster-General, who sent up the names to the Director-General, who made the appointment. The men were kept on probation for about two years as probationary Superintendents, and afterwards on probation for about one year as Superintendents. The age limit was 25, but as a rule the men came in at about 22. There was no minimum fixed, but a man seldom became a graduate before he was 21 years of age. Sometimes a man was appointed on account of his physical qualities or family connections, though he might not be a graduate, and he thought it desirable to retain that discretion. It was not exercised in one case out of twenty, but it was a discretion worth having. No difficulty was experienced with regard to the nominations. The Postmaster-General, the Director-General, and probably the Deputy Director-General practically formed a Board of Selection. He should not recommend any form of competitive examination to take the place of the present system, because the men selected for the Service were now very good.

75,168. Generally speaking, the educational qualifications of Anglo-Indians were not as high as those of Indians, but they were sufficiently good for the purpose, and such officers had certain qualities, such as the power of controlling men, in a higher degree than Indians. In choosing Anglo-Indians it was better to take a man whose social standing was such that he would be received by ordinary society, and thus would be in a position to speak to a Magistrate or Deputy Collector on any matter of business on equal terms. Occasionally a mistake was made as to this, but he did not think there was much serious practical difficulty in deciding about a candidate's social standing, and he thought it well to leave it vague as at present.

75,169. He was against fixing any proportion for Indians. If a proportion were fixed, it might in practice work out to less than the department actually would give. Roughly speaking the numbers of Indians and Europeans holding higher appointments were now about equal, but if it were found necessary to vary the proportion that would be done. The half and half position had not been worked out by any rule. There was power, he added, to appoint 10 per cent. of the Superintendents from non-domiciled Europeans, and this was necessary principally for field service. It was occasionally necessary to send half-a-dozen men on field service during war, and Indians were very averse to going, and domiciled Europeans were not very keen. The non-domiciled Europeans selected were men who could mix on equal terms with British officers. The 10 per cent. proportion had been found sufficient and at present the figure was rather below that. The men were often the sons of officers serving in this country. No particular examination was prescribed for them, but they were interviewed and their general education enquired into. They came in at about the same age as the other men in the service, and at present amongst them were two University men, a B.A. of Cambridge and a B.A. of Oxford.

75,170. There was no fixed age for promoting subordinates, to higher appointments but as a rule a man was not promoted after the age of 40, on account of the fact that a Superintendent had to be an active man ready to move about on the shortest notice.

75,171. With reference to the preponderance of Europeans and Anglo-Indians in the higher grades, there was also the tendency there for the number of Indians to increase. Up to the 1st November the number of Indian Superintendents was 103 out of 172, so that since the 1st July the number of Indians had risen by 3, and he anticipated that that process would go on, although not so markedly in the future. In 1893 out of 118 Superintendents only 34 were Indians, so that there had been a marked tendency towards multiplying Indians in those appointments. He would not recommend reserving any definite proportion of the higher posts for Indians and he did not think that the Indians themselves considered that too few of them were employed.

75,172. The witness did not consider that putting probationary Superintendents on a single list instead of on circle lists would be a practical arrangement. At present in Bengal, when a vacancy of Probationary Superintendent occurred, a Bengali was appointed, but if he were on a general list, and it was his turn for promotion, and a vacancy of Superintendent occurred in the Panjab, he would have to go to the Punjab to take up the appointment, and consequently men would be rarely serving in their own Province. As things were, a Bengali served in Bengal, a Madrasi in Madras, and so on. The only men for whom a general list would be suitable would be Anglo-Indians or Europeans, who did not so much mind to what part of the country they went. There would be objection to taking a man from Bengal and appointing him to the Punjab or *vice versa*. Moreover the man would probably rather resign the Service than go.

75,173. For promotion to the higher administrative posts men could be drawn not only from the Superintendents but also from the Postmasters, but in practice the Superintendents obtained most of the appointments.

75,174. Indian Civil Service officers came into the department as Postmasters-General. They were usually put on special duty for a month or two before they finally took up their appointments, but a period of six months was really necessary. The maintenance of a certain number of Indian Civil Service officers was essential. In practice 12 men were required to fill the 10 Postmaster-Generalships, as 2 officers were ordinarily on leave. Two of these posts were to be given to the Telegraph Department, but one would be an acting appointment. It would work out, therefore, that there would ordinarily be 5 departmental, 2 telegraph, and 5 Indian Civil Service Postmasters-General, but 2 of the 12 would be acting men. At the present moment there were 3 Postmasters-General absent on leave.

75,175. Witness desired to remove all distinctions, as far as salaries were concerned, between the Indian Civil Service officers and the officers of the Post Office. The only distinction now made was in the first grade Postmaster-Generalship, which in practise was not

open to a non-Civilian. That was not fair. No difficulty was anticipated in attracting suitable civilians. They were usually taken from a Province where promotion was bad, and one of the great attractions was the priviledge of being allowed to spend five months every year in the hills. Also the officers had more independence and freedom than they had under a Local Government.

75,176. The Indian Civil Service officers received exchange compensation, but under the amalgamation scheme it was proposed to do away with that in pursuance of the admitted policy of Government.

75,177. With regard to the salary of the higher officers, he thought the pay of the Director-General had been put a little low, and that in the future it would probably have to be raised. It was an appointment at least as important as that of a Secretary to the Government of India, and should carry the same pay, namely, Rs. 4,000.

75,178. The witness then said that the graded system of Superintendents kept officers waiting unduly in the Rs. 200 and Rs. 250 grade, and he agreed with the arguments used by his predecessor in favour of a time-scale. It would be impossible, however, to apply a time-scale to Postmasters, so long as the system of fixing the pay according to the importance of the office was followed. When new appointments were created much discussion with the Government ensued, and sometimes a good deal worse was allowed than what was proposed. There was no satisfactory rule. The present Rs. 250 grade was an iniquity. Under the present graded system also an officer's prospects depended to a large extent on the expansion of the Service and the retirement of other officers. There would have been a very serious outcry on this subject but for the fact that the department had expanded so rapidly. If a time-scale were introduced for Superintendents, probably Rs. 500 would be fixed as the stage at which an officer's career would be examined to see if he should rise above that amount. There was no difficulty in obtaining and keeping suitable Indians for Superintendents on the present pay, but there had been a marked falling off in the personnel of the domiciled Europeans.

75,179. With reference to leave and pension proposals, witness thought the present rule with regard to the travelling allowance granted on transfer was unfair. Officers should not be put to any extra expense owing to a transfer but should be treated as a Government officer was treated in the United Kingdom, where practically all expenses were paid. In no circumstances when an officer was on tour, should he get less than the daily allowance. In certain circumstances men received considerably less than the minimum daily allowance. If an officer had to make a journey from Delhi to Rohtak for the purpose of inspection, he would either get single first class fare or the daily allowance *minus* the railway fare, whereas if he remained in the place he was halting at he would get Rs. 4. The rules for travelling by river steamer were excessively hard. It would be an easy thing to put the matter on a proper basis and see that an officer obtained his daily allowance and steamer fare.

75,180. With regard to the Telegraph side of the department, under the Amalgamation Scheme there would be a small engineering establishment consisting of 46 officers, 4 of whom would fill administrative posts, 24 executive posts, and 18 would be under training as Assistants. In order to maintain that cadre 2 officers would be recruited every year. The figure was, he believed, arrived at by the Public Works Department after actual experience extending over many years; they found that about one officer was required for every 24. The leave reserve was included in the 18 Assistants. The proposal was that one of the recruits every year should come from England and one from India, the Indian recruit being alternately appointed direct and promoted from the Subordinate ranks. The recruits would be officers who had undergone a technical course in a College in India, and would presumably be the best available technical men who could be obtained from any of the Colleges. He could not say how the selection was made in England, but he believed there was a Board at the India Office, consisting of the Telegraph Adviser to the Secretary of State and one or two officers of the department who happened to be on leave.

75,181. On the subject of promotion from the Subordinate Service to the new Provincial Service, he allowed that the officers selected would ordinarily be in the second and not the first grade of Deputy Superintendents, as those in the latter would be generally too old. It was desired to promote men who had not passed 40, and who gave promise of doing really well. A man who had served in the subordinate ranks until after 40 as a rule was not a success in the higher appointments. He admitted that this would not be popular with the first grade men, and that they might be discouraged by seeing their juniors go over their heads, but it was impossible to avoid this if men of a suitable age were to be taken. If there was any exceptional merit in an officer who was above the age, a special case would, no doubt, be made out in his favour. In practice, under this scheme the specially promising men would get a chance of promotion at a comparatively young age. A man of Rs. 370 as a Deputy Superintendent, when transferred to the superior service, would draw Rs. 370 whether he was an Assistant or a Superintendent, because there was no distinction in the pay; it was all on one time scale. The fact that such a man was brought into the gazetted ranks would be a sufficient reward, and he would go up on the time-scale. In fixing the Rs. 370 stage it had been borne in mind that if too many of such officers were brought in at too high a stage they would block the other officers, but it was thought that bringing them in not higher than the Rs. 370 stage would be doing as little damage to the others as possible.

75,182. The Upper Subordinate Service, the witness went on to say, bore the same relation to the Superior Service in the Telegraph Department as the Provincial Civil Service bore to the Indian Civil Service, except that the Provincial Civil Service officers held gazetted rank and the others did not. So far as the Provincial Service officers in the Telegraph Department were concerned, they did exactly the same work as the other officers of the Superior Service, the only difference being the name and the pay, and they were all on one list for the purpose of promotion. There had been a listed arrangement in force for about two years, but it was withdrawn and the men were put on the same list again. The object of the distinction was to get men cheap, but that could be done without calling them Provincial Service officers, and he did not think the term Provincial Service was appropriate in the Telegraph Department, seeing that the officers were not in any sense confined to a Province and therefore he should like to abolish the term.

75,183. With regard to the possibility of having two separate time-scales, one for Assistant Superintendents and one for Superintendents, there had been no difficulty since the time scale was introduced on the score of blocks in promotion in the Telegraph Department, and he thought having two scales might lead to some practical difficulty. He did not think it would be easier to select the men if there were two separate compartments, and with two separate compartments there would be some necessity to revise the pay. At present an Assistant Superintendent in charge of a division, provided he was continually in charge, was allowed to go up the scale, but if there was a compartment for Assistant Superintendents directly he got to the top of that compartment he would not be allowed to draw his increment. If the two systems were in force a good deal of modification would be necessary in all the rules. For instance, the Superintendent of Telegraphs in Delhi would lose considerably if there were two compartments in the time-scale.

75,184. With reference to the traffic side of the Telegraph Department, three-fourths would be recruited in India, possibly seven-eighths. The Department had asked to be allowed to recruit one-fourth from outside. In the main recruitment would be by the promotion of subordinates, and the only direct recruitment would be the one-fourth. One reason for

not bringing in a larger proportion of direct recruits was that special knowledge was required for the Department and it took 4 or 5 years to learn the work.

75,185. The witness considered that the officers of the Superior Traffic Branch should be borne on one list for the whole of India and that was the intention. Although officers might be on a general list it was very often possible to keep them in their own circle by taking a little trouble about it. In the Post Office very few transfers were necessary.

75,186. With reference to probation and training in the Telegraph Department, study leave ought to be compulsory. Unless an officer went to England once in every seven years to bring himself up-to-date, he would not be an expert. For instance, most of the officers knew very little about wireless telegraphy unless they had gone to England and studied it. He thought six months' study leave every seven years would not be excessive, and he would go so far as to say that it should be compulsory in the case of a Scientific Department.

75,187. On the subject of the Guarantee Fund the witness handed in the reply* which had been given to a question in Council on the subject, and this would furnish all the information the Commission needed.

75,188. A part of the fund was used for excellent purposes. In the year 1908 he asked the Government to be allowed to use one-fourth of the surplus for grants to widows and orphans of men who had not received a pension. He proposed to ask the Government to give him a freer hand in that matter and ultimately he would probably ask to be allowed to use the whole surplus.

75,189. (*Sir Murray Hammick.*) The witness said that he did not lay stress upon the Postmaster-General being allowed to live five months in the hills, but it was one of the great attractions of the service. He thought it would be preferable if he took only three months in the hills, and it might be varied a little according to the Province. In one case two months might be sufficient and in another case four months might not be excessive. It was found as a rule that the Postmaster-General did a fair amount of work while in the hills. As a rule the officer took with him two clerks, whose travelling allowance and batta were not paid by the Government. One of the conditions of living in the hill station was that there should be no expense to Government.

75,190. With regard to non-domiciled Superintendents, their pay on first entering the service was occasionally Rs. 200, but more frequently Rs. 100 a month. Men occasionally came from England to take up the appointments and there were a great number of applications from men in India, planters and officers of other services, for posts for their sons. It had been considered whether the appointments should be made through the Secretary of State, but it was thought on the whole that the existing arrangement was working fairly well. There would be practical difficulties in getting a man through the Secretary of State, and on the whole it was believed that the department was in a better position to judge what was required. Officers selected in England might think the prospects were a good deal better than they were, and it was now possible to explain clearly to the officer what he had to expect if he came out. The proportion of non-domiciled men in appointments turned out of the service might be about one in seven, no larger than that of other classes. The number of appointments of non-domiciled Europeans in the year would be something under one for the whole of India. There were 17 vacancies open to them, and the vacancies were about 3 every 4 years. The higher officers were always on the look-out for a likely man, and if such a man was found, although he might be in Madras, it was possible he would be appointed to the Punjab. Care was taken as far as possible not to appoint men who were not fit for the post. Waiting lists of appointments were kept by each Postmaster-General, and as the Director-General went round the country two or three times in the year he was told precisely how the matter stood and interviewed the likely men. Very often officers in India applied to the Director-General asking him to interview their sons for the appointments. There was no language test at present. Sometimes men were required for Burma or the Punjab as necessity arose, and it would be hard to propose any such test. For the work of the Post Office a knowledge of the vernaculars was important, and most of the officers picked up what was necessary, but he did not think it would be fair to impose any specific test on the non-domiciled European because he was more liable than any other class to move from one Province to another.

75,191. On the subject of allowances, witness thought it would be right that a man should receive his net daily allowance, *plus* his fare. He admitted that the allowance was given partly to cover the expenses of locomotion, but in practice there was a great deal of incidental expense which was not taken into account in the regulations, and the cost of moving had increased tremendously in the last few years. A man halting for a day received the same as he would receive if travelling by train. When living in camp he did not think the daily allowance meant an actual loss to the Indian officers, but he was not sure that the same would apply to the domiciled or non-domiciled Europeans. At the same time the desire was to raise no distinction but to treat them if possible alike. The expenses of transfer were so considerable that in any case it was only right a man should get a larger allowance than when ordinarily travelling. Transfers were particularly hard on the officers of the Telegraph Department, because as a rule they went from one Province to another, and the transfers in the Telegraph Department were more numerous than in any other Department owing to the fact that the staff was so small and had to be continually shifted about, especially in the leave season. In the Post Office it was not so bad, as there was always a local man to put in.

75,192. The work of Superintendents of the Post Office was hard. There was no absolute rule as to how much travelling Superintendents should do, but they were certainly expected to be out inspecting about 156 days during the year, and some probably were out for 200 days. Half their work was inspection, and in some divisions all the travelling had to be done by road. The Superintendents disposed of complaints received from the public, and sometimes the Postmaster-General himself would send complaints to them for investigation. When they went to larger towns they had to interview merchants and leading people in order to make convenient postal arrangements. They had also to do a certain amount of auditing, checking of receipts, and so on. The lowest pay of a Postmaster in complete charge of a post office might be Rs. 15 in a small branch office, which had only 20 letters a day to deliver, and there were post offices in which the number of letters was as low as three. In some cases the Postal Service was performed by the School-Master, but there might be cases where there was a Telegraph Office and a small number of letters, and in such cases the pay was generally Rs. 20 or Rs. 25. There was a certain difficulty in filling up appointments at the present time in the Central Provinces, but it was not very serious and was being met by improving the pay. The department had a very free hand in regard to raising pay up to Rs. 300 a month, and could not only raise the pay but could create new appointments to that amount.

75,193. The promotion of Postmasters to Superintendents did not very often occur, the Superintendents generally coming from Inspectors, some of whom rose from the ranks while others were recruited direct. Nineteen of the Punjab Inspectors were graduates and some of them were quite capable of becoming Superintendents. In the higher appointments, Deputy Postmasters-General and Assistant Directors-General were appointed from the Superintendents' grade chiefly.

* *Vide* Appendix II.

75,194. (*Mr. Chaubal.*) The witness said that the Superintendent was regarded as a higher officer than the Postmaster. The salary of a first grade Superintendent was less than the salary of the highest Postmaster, but there were about 20 higher appointments, which were open to the Superintendents. Places above Rs. 1,000 were generally given to Superintendents. Postmasters in the three higher grades might be posted to the higher positions, if they were considered fit for the posts, but it was not the same class of work which they had been doing. The work of the Deputy Postmaster General more nearly resembled the work of Superintendents, and as a rule the Superintendent was more suited for the work. Many of the men rose from the ranks, having entered as clerks, and some were taken at Rs. 50 or Rs. 60. Graduates were often recruited for the Superintendent's posts. The positions were not advertised, as men could be obtained without doing so, and the matter was perfectly well known. Whenever there were Superintendentships vacant no advertisements or notifications were issued informing the public, and no intimation was given to the Heads of Colleges. As a rule, unsuccessful candidates for the Provincial Civil Service came straight to the Post Office.

75,195. With reference to his preference for the present system of recruitment over any system of competition witness said that ten years ago it was a system of competition. The Local Governments in Bombay and other Provinces held examinations for their Provincial Civil Services, and the Post Office would take the first or second man who just failed to get these posts. The men obtained by the present system were quite as good as the men obtained in those days. No particular educational qualification was prescribed for men in grades below Rs. 100, but an endeavour was made to obtain men who had passed the Matriculation, and of course higher pay was given to men with better qualifications.

75,196. With reference to Indians not being willing to take Postmasterships, he thought the whole Service looked upon the Superintendent's as the higher appointment. Many Superintendents, if asked to go as Postmasters on rates above their own salary, would not take the position, considering it to be an inferior appointment. The Postmaster had large pecuniary responsibilities, and this made the work unpopular.

75,197. (*Mr. Ramsay Macdonald.*) The witness said there was no objection to advertising a little more widely the fact that selections would be made for appointments. He preferred selection to competitive examination, and special care was taken in the Post Office to find good men. He believed the Post Office took more trouble in the matter of selection than most other Departments; there was a long period between the vacancies to find the best men and the Postmasters General were always looking out for the most suitable men. The selection was quite impartial, although considerations such as that of family came into the matter. Probably three-fourths of the probationers passed on the first occasion, but sometimes the man was appointed direct and went up for examination within 4 or 5 months, and it could be hardly expected he would pass. But where a man had had a reasonable chance the directly appointed man would pass in three cases out of four. He thought it would be a pity to limit a man to only one chance, because an officer might be good in three of the subjects, and deficient in one or two, and he preferred the present arrangement of giving the men a second chance.

75,198. As to the length of the probation, the longest period a man had remained as a probationary officer was about three years. The average of 2 years and 2 months had been taken from 16 cases extending over a period of three years. The matter, of course, depended upon vacancies, and if fewer were recruited the average period would be shorter. It did not depend only on success in departmental examinations but also depended on vacancies. The two years and two months did not mean the time taken by a man to pass the departmental examination; the average time for passing that examination was probably about 15 months.

75,199. Witness thought the efficiency bar was fairly effective in the department, and an officer's career was always reviewed before he was transferred from one grade to another. There was no great difficulty in applying the bar.

75,200. As to pension, he had not worked out what the financial effect of his proposals would be. The power of an officer to commute one-fourth of his pension for a lump sum was given now in many cases on medical certificate, and witness desired a man should have the right to commute a portion of his pension whether he was fit or unfit. He associated himself with what the service had said on the subject.

75,201. With reference to his suggestion that the exception in Article 644 of the Civil Service Regulations, under which a period during which an officer officiates for another officer absent on privilege leave is not permitted to count as service qualifying for additional pension should be abolished, witness pointed out that if he were an officer officiating as Postmaster-General for another officer who was qualifying for that pension, the period during which he officiated did not count in his period for qualifying for his own pension. His service qualified him for his own special pension of Rs. 5,000, but he would be officiating in an appointment which was entitled to Rs. 6,000.

75,202. It was possible it might be advantageous to the service to give men an earlier pension, but he thought the Decentralisation Committee's Report had suggested powers of turning out any inefficient officers. As a matter of fact, the tendency for officers was to stay on, and his trouble was occasioned by people imploring him to give them extensions. No doubt the service generally would like to go after 25 years, but if a man was fit he was only too glad to stay on.

75,203. On the subject of holidays, witness said the Post Office, especially the railway mail service, had a considerable amount of Sunday service for which they had no compensation and he should like to give them 50 per cent. extra privilege leave, the leave being allowed to accumulate up to three months. There was the possibility of paying people for Sunday duty, but that would be a very troublesome matter and lead to much difficulty.

75,204. On the subject of the Guarantee Fund he did not think the service really desired the surplus to be under the control of a Committee. He doubted whether any officer, who would give evidence before the Commission, had actually paid Rs. 5 into the Fund. He thought the men would be glad if a larger sum was given for widows and orphans; otherwise he did not think they were very much interested in the matter.

75,205. With reference to fines being handed over to the Committee for the general benefit of the subordinate staff, he would not object to that being done, but thought it would be a little difficult to work. The fines might be used for the purpose of helping Institutes, and so on, and in the course of time something like that might be suggested. In the Post Office there had been no great tendency to form mutual clubs and societies, but if that tendency occurred the idea of utilising money in that way might be considered.

75,206. (*Mr. Abdur Rahim.*) The witness thought that Government would appoint what they considered to be the best officer as Director-General whatever service he came from. With regard to selections made for Superintendents, the best men were selected for the position, everything being taken into consideration. In the Punjab it might be necessary to appoint a Hindu and Muhammadan alternately, with occasionally a Sikh or domiciled European. It was also necessary to see that a certain number were appointed from particular communities. That was one of the objections to examination. In Bengal the same course was taken. With regard to Indians not being adequately represented in the higher appointments in the Post Office, that matter was gradually being set right. He had received no complaints on the subject, nor had he seen much about it in the Press with regard to the Post Office. In fact, there had been frequent testimony that Indians had received very fair treatment in the Post Office. In the lower ranks of the Superintendents' grade there were more Indians now than there were before, and they would get promotion in course of time.

75,207. In the Telegraph Department, under the new scheme, one appointment would be made in England and one in India, and in the latter case the appointment would be from the subordinate service in one year and in the next year would be a direct appointment. The men would be taken from the engineering colleges or any college up to the proper standard at the time. The mode of selection would be nomination by the Director-General to Government, the Director-General seeing who were the best men available. The selection of an unfit man recoiled on the Director-General himself, as an inefficient man was of very little use and had to be turned out. Personally witness would not object if the so-called Provincial Service received the same pay as the others, if they went through the same technical training in England. There was no pending proposal to send candidates to England, but if there was any intention of levelling up the pay to that of the Imperial Officers the men would have to be equally competent, and in order to become equally competent it would be necessary for them to go to England, and take a proper course for two or three years. If they did that he had no objection to their getting the same pay.

75,208. One of the most important parts of the duty of the Superintendent was interviewing the public, and he kept diaries which were inspected by the Postmasters-General.

75,209. (*Sir Theodore Morison.*) The witness reiterated what was stated in his written answers that if an Indian was selected by the Secretary of State he should be eligible for the Imperial branch and should be paid full pay. The distinction made should depend entirely on the qualifications obtained in England. He would be willing to promote to the Imperial branch a man who was in the Provincial Service and went to England on study leave, but preferred that he should qualify straight away. In the Provincial branch in future he would have men recruited who were fit for the Imperial Service, or not recruited at all. The lower class work of the Telegraph Department could be done by the men already there, namely, the Deputy Superintendents. If the pay of Europeans and Indians was made the same, officers from Europe should get some special concessions as regards leave and as regards the expenses of their voyages to and from their homes. On a basis of that kind he did not see why an Indian officer doing the same work as another officer should not get the same pay, but he would make a training in England essential, and he thought the same would apply to the Civil Service also.

75,210. With reference to commutation and the right to commute, he meant commutation of actual, earned pension. An officer who retired should have the right to say that he wanted a lump sum in place of one-fourth of the pension; in other words, he would treat one-fourth of the pension as deferred pay. In England officers formerly received two-thirds pension whereas in India they received only half their pay or less. The pension should be more favourable in India. In the case of an officer of high rank the pension was nothing like half his pay. Commuting less than one-fourth would not be sufficient in India. The pension arrangements in India were not sufficiently liberal, and had no relation to the pay the man had drawn or the services he had done. He had two objections, the quantity of the pension and the method by which it was paid, and he laid special stress upon the second one, by which a man's family might be deprived of the whole of it. He wished to see a change in both directions, or in the alternative a General Provident Fund, which he should prefer. If an officer died after 15 years' service his wife would then get something, whereas at present she was left destitute. He should like to see a fairly liberal Provident Fund to which the Government would contribute something like the amount the officer paid in himself.

75,211. (*Mr. Hutchinson.*) The witness said that in default of a time scale he would be willing to have a Rs. 200—20—300 grade in place of the Rs. 200 and Rs. 250 grades and keep the graded system. The existence of the Rs. 250 grade was a tremendous hardship and it ought to be done away with.

75,212. (*Mr. Styan.*) The witness considered that two appointments of Postmaster-General for the Telegraph Department were as many as could be expected, seeing that there was no obligation to provide any at all, and he thought it was about as many as suitable officers would be available for at one time. Practically, the appointments were those which would otherwise have been given to civilians, and he thought on the whole the civilian would be the more efficient officer. In the circumstances of the case, however, the department had said they would provide two.

(The witness withdrew.)

C. H. MCMINN, Esq., Superintendent of Post Offices, Kangra Division, Punjab;
S. C. SINCLAIR, Esq., Superintendent of Post Offices, Derajat Division, Punjab; and
SRI RAM, Esq., M.A., Personal Assistant to the Postmaster-General, Punjab and North-West Frontier Province.

[*These three witnesses were examined together upon the written statement given below.*]

Written statement on behalf of the Superintendents and Gazetted Postmasters of the Post Office.

75,213. **Introductory.** — The Director-General of Posts and Telegraphs circulated to all Postmasters-General and Inspectors-General, Railway Mail Service in India, a letter dated the 28th February 1913, from the Government of India in the Department of Commerce and Industry, inviting the expression of a corporate opinion upon nine indicated heads from the Gazetted Officers of the service or from a section of them. The Postmasters-General and Inspectors-General circulated this letter among the Deputy Postmasters-General, Superintendents and Gazetted Postmasters throughout India.

These officers held local meetings in their respective circles, and deputed delegates to reprrsent them at a central conference for all India at Nagpur. This conference sat on the 21st, 22nd, and 23rd April 1913. There were present as delegates, Deputy Postmaster-General, Mr. M. P. C. Byrne, who presided, 18 Superintendents, and 2 Postmasters. In addition, two other officers, namely, Mr. W. A. Roussac, Inspector-General, Railway Mail Service, Western Circle, and Mr. R. W. Hanson, Officiating Assistant Director-General of the Post Office, attended the conference.

At that conference the following Resolutions (paragraphs 75,214–23) confined to the nine heads referred to above, were passed:—

75,214. **(I.) Methods of Recruitment.**—1. That recruitment into the grades of Superintendents should be from two sources—(*a*) by direct nomination of candidates outside the department; and (*b*) by selection from departmental officials, in the proportion of two to one.

2. That the existing system of giving 10 per cent. of the appointments of Superintendents to non-domiciled Europeans is suitable and may continue.

3. That there should be one general list of candidates who have passed the departmental examination from which Superintendents should be appointed.

4. That Indian candidates, selected for the appointment of Superintendent, be ordinarily graduates of a recognised University, and that domiciled European candidates be ordinarily undergraduates, both classes of officers being men of good social standing.

5. That 1st class Postmasters should be recruited from postal officials, subject to the condition that they pass the departmental examination and that there be no restriction as to the age at which they can go up for the examination.

75,215. **(II.) System of Training and Probation.**—6.* That the minimum period of training of Probationary Superintendents should be one year, and maximum two years.

7. That non-domiciled Europeans selected for the Superintendents' cadre should be graded with Probationary Superintendents irrespective of their pay.

75,216. **(III.) Conditions of Service.**—8. That the diem allowance of Superintendents of post offices should be raised from Rs. 4 to Rs. 5, that of Superintendents of the Railway Mail Service to Rs. 6 a day, and that when a Superintendent, Railway Mail Service, proceeds on deputation outside his jurisdiction he should be allowed travelling allowance at the same rate as Superintendents of post offices. That when an officer is transferred he should in case of railway journeys be allowed four fares in lieu of double the fare of the class he is entitled to at present.

9. (*a*) That 1st class Postmasters, in the grades of Rs. 300–400 and Rs. 400–500, should get first class travelling allowance on transfer; (*b*) that Probationary Superintendents should get first class travelling allowance.

10. That in divisions, where it is necessary, tents should be supplied to Superintendents of post offices and tentage granted.

11. Wherever difficulty is experienced by Superintendents in obtaining suitable house accommodation at a reasonable rent, Government should provide accommodation charging rent at the usual rates.

75,217. **(IV.) Conditions of Salary.**—12.† That the pay of a Probationary Superintendent be fixed at Rs. 150 for the first year, and Rs. 200 thereafter.

13. That Superintendents of Post Offices be placed on the following graded scale of pay:—

1st grade	- Rs. 750 to 850	-	20	appointments.
2nd „	- „ 600 to 700	-	25	„
3rd „	- „ 450 to 550	-	40	„
4th „	- „ 300 to 400	-	50	„
5th „	- „ Fixed at 250	-	37	„

That if Government should be unable to accept this proposal or to sanction the number of appointments specified in each grade, Superintendents be placed on a time scale of pay starting from Rs. 300 and rising to Rs. 900 at the end of 22 years as shown below:—

1st year	- Rs. 300	12th year	- Rs. 575
2nd „	- „ 325	13th „	- „ 600
3rd „	- „ 350	14th „	- „ 630
4th „	- „ 375	15th „	- „ 660
5th „	- „ 400	16th „	- „ 690
6th „	- „ 425	17th „	- „ 720
7th „	- „ 450	18th „	- „ 750
8th „	- „ 475	19th „	- „ 780
9th „	- „ 500	20th „	- „ 810
10th „	- „ 525	21st „	- „ 840
11th „	- „ 550	22nd „	- „ 870
	23rd year - Rs. 900.		

14.‡ That the pay of Postmasters of gazetted rank should be improved so as to put them on a par with Superintendents.

15. That the pay of Deputy Postmasters-General and Inspectors-General should be Rs. 1,100–80–1,500.

75,218. **(V.) Conditions of Leave.**§—16. That Privilege leave be allowed to accumulate up to four months.

17. That, in view of the fact that officials of the Post Office do not get complete relaxation on Sundays and gazetted holidays, 45 days' privilege leave be granted on 10½ months' service.

18. That so long as an officer has earned title to leave by the necessary service, he should be allowed to avail himself of it, provided that he can be spared; and there should be no proviso that he must be on duty for a specified period after return from last leave before he can be granted leave again.

19. That officers of the Post Office, drawing pay at Rs. 500 and above, should be granted the privilege of European Service leave rules.

20. That three years' furlough, leave on medical certificate or on private affairs spent in India should count as service for pension.

75,219. **(VI.) Conditions of Pension.**—21. That in consideration of the hard and tedious work and the very few holidays enjoyed by the officials of the Post Office they should be allowed full retiring pension after a service of 25 years, and full invalid pension after a service of 20 years.

22. That for the purpose of calculating pension and leave allowances the average emoluments for two years be taken into account instead of for three years.

23. That the maximum amount of ordinary pension admissible to officers of the Post Office should be Rs. 6,000 per annum.

24. That the option of commutation of pension up to a limit of a quarter of the pension earned should be allowed as a matter of course, irrespective of the conditions set forth in the Government of India, Finance Department, Order No. 585–E. B. dated 27th September 1912. In the case of officials dying before retirement, the commuted value of a quarter of the pension which would have been admissible at the time of death should be paid to the widow and children, the nearest exact age of the officer, subject to a minimum of 50 years, being taken into calculation for determining the commuted value of pension.

25. That extension of service should not be granted to an officer who has attained the age of 55 years.

75,220. **(VII.) Such Limitations as may exist in the employment of Non-Europeans, and the working of the existing system of division of services into Imperial and Provincial.**—26. That there is at present no limitation to the employment of non-Europeans in the service and that it is neither necessary nor desirable to introduce any limitations.

75,221. **(VIII.) Relations of the Service with the Indian Civil Service and other Services.**—27. That, as recommended by the Public Services Commission of 1886–87, not less than 50 per cent. of the highest

---

* Mr. Sinclair submitted the following as an amendment in place of Resolution 6:—"That Probationary Superintendents who fail to pass the Departmental test after two attempts should be removed from the list."

† Mr. Sinclair submitted the following as an amendment in place of Resolution 12:—"That the pay of a Probationary "Superintendent appointed by direct nomination should be fixed at Rs. 200 per mensem during his probationary period, "while that of Probationary Superintendents selected from Departmental officials should be fixed at Rs. 150 per mensem for "the first year and Rs. 200 per mensem thereafter."

‡ Mr. Vaughan, who was examined after Messrs. McMinn, Sinclair, and Sri Ram had withdrawn, submitted the following as an amendment for Resolution 14:—

14 (*a*) That the pay of Postmasters of gazetted rank should be improved so as to put them on a par with Superintendents.

(*b*) That as Postmasters of gazetted rank are required to pass the same Departmental examination as Superintendents of Post Offices, the appointments of both should be interchangeable.

(*c*) That the pay of Presidency Postmasters, *i.e.*, officers in charge of the three Presidency Post Offices, should be the same as that of Deputy Postmaster-General and Inspectors-General, with whom they should also be graded.

(*d*) That Postmasters of gazetted rank and Superintendents of Post Offices should alike be eligible for the appointments of Deputy Postmasters-General, Inspectors-General, and Presidency Postmasters.

§ Mr. McMinn desired an addition to be made to the Resolutions under this head and wrote as follows:—

"The addition which I propose is in connection with the rules for leave out of India and is to the effect that such leave should be calculated as commencing from the date of departure from the nearest port of embarkation and as expiring on the date of return to such port. The object is to equalise, in the case of all officers, the amount of leave out of India. At present an officer who is stationed far up country is at a disadvantage in this respect. I trust that I am not out of order in making this suggestion, and as I have been selected to appear as a witness before the Commission, I shall be glad to give in full my reasons for the proposal."

posts in the department should be reserved for departmental postal officers.

28. That the Telegraph Service should not have any claim to or be given any of the highest posts in the Post Office. It cannot be urged too strongly that it would be most unfair to give any of these posts to officers of the Telegraph Department.

29. That in view of the amalgamation of the Post Office and the Telegraph Department, it is apprehended that the opportunities of postal officials rising to higher appointments might be diminished. This conference therefore prays for an assurance that the prospects of promotion of officials of the Post Office will not be interfered with in any manner.

75,222. **(IX.) Any other points within the Terms of Reference to the Royal Commission not covered by the preceding Heads.**—30. That fines recovered from officials and the interest of the Guarantee Fund should be used for the benefit of postal officials, and that a committee representing all grades of the service be appointed for considering the best means of utilisiug the amount.

31. That the rules for the encouragement of the study of languages of different tribes in India should be made applicable to Superintendents of post offices and Postmasters, and that they should be allowed to appear at examinations and earn rewards under those rules.

75,223. The following (paragraphs 75,224–31) is submitted in explanation of such of the Resolutions as may appear to need comment or elucidation. The Resolutions are dealt with seriatim.

75,224. (*I.*) *Methods of Recruitment* (*see also paragraph* 75,214). *Subhead* 1.—The fixing of the proportion of two to one in the filling up of vacancies among Superintendents is suggested for four reasons: (i) because it is desirable that the interests of the nominated candidates should be secured as against unlimited selection from a large number of subordinates, (ii) because it is desirable that there should be a steady infusion of new blood into the Department, (iii) because adhesion to the principle that only one in every three appointments shall be filled by selection from the Department would tend to determine the existing system of keeping Probationary Superintendents waiting unduly for preferment, and (iv) because, while at present the departmental subordinate has open to him two avenues of preferment, by either of which he can rise to the highest posts, namely, by adhering to the postmasters' line and working his way up by that means, or by entering into the Superintendent's grade; the Probationary Superintendent has only one avenue of preferment, and the suggested limitation would have the salutary effect of equalising the chances of promotion alike for nominated and departmental officers.

Subhead 3.—The general list here advocated is asked for on the ground that, at present, promotion in the various circles for qualified, departmental candidates and Probationary Superintendents is frequently local with the anomalous result that an officer of very junior standing gets preferment in his local circle to the grave disadvantage of his seniors in other circles. A rule abolishing circle promotion for such officers and promoting all officers from one general list according to seniority, no matter where employed, would act beneficially.

75,225. (*II.*) *Training and Probation* (*see also paragraph* 75,215.) *Subhead* 7.—While exceptional circumstances require that non-domiciled Europeans should occasionally be drafted into the Superintendents' cadre by selection and appointment in India, the interests of the service require that they should pass through a period of training before being entrusted with the duties and responsibilities of a Superintendent. These are many and onerous. The seniority of a Probationary Superintendent dates only from the time of his appointment as a substantive Superintendent; it is manifestly unfair that a non-domiciled European wholly unconversant with the duties of his post, should supersede a Probationary Superintendent who has, by actual training qualified himself for the post of a Superintendent.

75,226. (*III.*) *Conditions of Service* (*see also paragraph* 75,216). *Subhead* 8.—The proposal for an increase in daily, or halting, allowance is based upon the fact that owing to the general rise in the cost of living away from head-quarters the present allowance is insufficient.

The idea at present is that a Superintendent is entitled to a minimum daily allowance of Rs. 4. In many instances this is pure theory and nothing more. An illustration will suffice. A Superintendent travels by rail over a distance for which the railway fare is Rs. 2–8–0. If he claims his daily allowance of Rs. 4, from that is deducted his railway fare, so that he receives only a nett sum of Rs. 1–8–0. He has, however, the option of abandoning his daily allowance and of charging instead double railway fare or Rs. 5. From this sum is deducted the cost of a single railway fare, or Rs. 2–8–0, so that he receives a nett sum of Rs. 2–8–0 instead of Rs. 4. If, therefore, an officer starts by rail at 8 A.M., on a Monday, and, having reached his destination, say, at 10 A.M., works the whole of that day and the day following (Tuesday), and then leaves by rail at 11 P.M., on a further similar journey, arriving at his next destination, say, at 1 A.M., on the second day (Wednesday), he draws nothing for his actual halting expenses either for Monday, Tuesday or Wednesday, because of the rule that no daily allowance is claimable unless an officer halts from midnight to midnight at each station. If he claims his double first-class railway fare for the journey on the Tuesday, the result is that he is out of pocket for his actual halting expenses. And in this respect the officer has in truth no election. He cannot claim his Rs. 4 daily allowance for the second day (Tuesday). He has no alternative to charging the double fare less the usual deductions, and thereby ensuring his own financial loss. The claim is, accordingly, made that in no circumstances should an officer draw less for travelling allowances than his minimum daily allowance which, it has already been proposed, should be increased from 4 to 5 rupees a day. It may be added that a Superintendent of post offices is by departmental rules compelled to make shorter halts while on tour than other District Officers, and this places him at a financial disadvantage as seen above.

The Superintendent, Railway Mail Service, stands in a worse position than the Superintendent of post offices. He is treated as a railway officer, but is not given corresponding facilities, such as a specially fitted-up carriage with a kitchen and accommodation for servants. He draws a daily allowance of Rs. 4 if absent from head-quarters for over six hours. Being confined to the railway line, he has to pay for his meals in the dining cars and at the various railway refreshment rooms on the line, and on a journey involving an absence of over six hours from head-quarters these charges aggregate to an appreciable amount. He has in addition to pay for his sleeping accommodation, porterage, &c. He is, therefore, entitled to ask that his daily allowance be increased from Rs. 4 to Rs. 6.

Subhead 9 (*a*).—The position of a first-class Postmaster is in certain respects anomalous and invidious. He is not a first-class officer within the meaning of the Civil Service Regulations. His rank of first-class Postmaster is a departmental distinction. All Postmasters whose salaries are above Rs. 300 are first-class Postmasters. They are also Gazetted Officers. They are classified, however, for purposes of travelling allowances as second-class officers.

No Gazetted Officer is entitled to claim an allowance for transporting his family on a transfer. The first-class Postmaster whose pay ranges from Rs. 300 to Rs. 500 falls within the purview of this forfeiture. The honour of the Gazette operates on him as a fine.

Concurrently, as a second-class officer, the first-class Postmaster receives on transfer only a double second-class fare for himself, one-half of which is expended on the purchase of a ticket. The other half does not cover even the incidental expenses of the journey.

Subhead 9 (*b*).—The Probationary Superintendent is not infrequently sent on deputation. The cost of

locomotion is always constant and is never decreased to suit the Probationer's rank or purse. It seems but fair, therefore, that he should be provided with first-class travelling allowance.

Subhead 10.—In many localities which an officer is compelled to visit there is no accommodation, and tents are there absolutely necessary. In other localities the various bungalows belonging to the Public Works Department or other Departments are not open as of right to the officers of the Post Office. In Divisions where tents are necessary either from permanent want of proper buildings or when the permanent buildings are occupied, it is submitted that these officers should be provided with the cost of their upkeep and transport by the Department, as allowed by Article 1042 of the Civil Service Regulations.

Subhead 11.—In other Government Departments provision is made for house accommodation at a fixed rate; postal Superintendents often experience serious difficulty in securing accommodation. If Government were either to build or acquire suitable houses this would be obviated.

75,227. (*IV. Conditions of Salary* (*see also paragraph* 75,217.)

Subhead 12.—A Probationary Superintendent now starts on a pay of Rs. 80 or Rs. 100 a month. This scale is obviously too low to attract candidates of the required qualifications or to enable them to live suitably after entering the Department. In other Departments —*e.g.*, the Telegraph, Finance, Railways—no probationer starts on less than Rs. 150, and that is conceived to be the minimum on which an officer can support himself, and then only with difficulty. The proposed increase after the first year represents more nearly the lowest living wage.

Subhead 13.—Originally the pay of Superintendents in the lowest grade was fixed at Rs. 200. At the date of the Public Service Commission in 1887 the pay of the highest grade was Rs. 400–500, and the number of appointments in all grades was 120. The Sub-Committee of the Public Service Commission at that tims prefaced their report with the following observations:—"It will be apparent that not only are the "several branches of business undertaken by the "Postal Department of a more or less complicated "character, but that they demand even in the lowest "grades strict integrity and some intelligence, in "most grades education, method, energy, and tact, "and in the superior grades these qualities in a high "degree combined with administrative ability. In "some grades the necessity for economy has com-"pelled the adjustment of salaries on a scale which, "perhaps, errs on the side of inadequacy, but which "has not entailed a sacrifice of efficiency." However, it was not until 1904 that a new grade of Rs. 500 to 600 was introduced. At the present day there are 172 appointments, which are distributed thus:—

	Rs.	Rs.	Appointments.
1st grade	500 to	600	11
2nd ,,	400 ,,	500	33
3rd ,,	300 ,,	400	48
4th ,,	250		48
5th ,,	200		32

The scale of pay and grading are to-day totally inadequate. Since they were fixed the cost of living has risen greatly, and in consideration of this the salaries of officers holding similar rank in other Government Departments has been revised and increased. It is, therefore, necessary that the present grading and scale of pay of Postal Superintendents should be correspondingly improved. There has been of late years an enormous expansion in the business of the Post Office which has considerably augmented the labour and responsibilities of Superintendents. Concurrently with its increased scope the revenue of the Department has grown proportionately. It is not unfair to ask that increased duties and responsibilities should meet with the adequate remuneration from a flourishing Department which is now working at a large profit in spite of numerous substantial concessions to the public, which have made the Indian postal service the cheapest in the world. A statement showing the increase of business within the past 25 years is attached and marked A.

Whilst on the one hand the business and financial prospects of the Department have grown annually, the prospects of the Superintendents have been lessened and their hopes of advancement checked.

In 1887 the number of higher appointments held by uncovenanted officers in the Post Office was 19, being 15·8 per cent. of the total number of Superintendents. To-day the number of these higher appointments is 20, but the number of Superintendents has risen to 172, the percentage of posts to candidates being reduced to about 11·6. The prospects of the Superintendent are, therefore, worse now than they were 25 years ago. (*See* statement.)

	1887.	1912.
Postmaster-General	1	4
Deputy Postmasters-General	9	5
Assistant Directors-General	3	4
Presy. Postmasters	3	3
Inspector-General, R.M.S.	0	4
Comptoller P.O.	1	0
Deputy Comptroller P.O.	1	0
Assistant Comptroller P.O.	1	0
	19	20
Superintendents	120	172

Apart from the increased number of officers eligible for the higher appointments which have not themselves increased proportionately, Superintendents have now lost appointments once held in the Accounts Branch, which, since they have been lost, have increased in number. That is all dead loss.

In 1887 the Superintendents were entitled to fill 9 posts of Deputy Postmaster-General. Of these 4 have been abolished and 5 survive. Four new appointment of Postmaster-General were created and added to the 6 similar posts already existing, thus raising the number to 10. Of these appointments, departmental officers hold 4. The Public Service Commission of 1887 recommended that of the 7 higher appointments (1 Director-General and 6 Postmasters-General) the uncovenanted officers of the Post Office should ordinarily hold not less than 3. The Director-Generalship has in practice always been held by a Covenanted Civilian. The recommendation, therefore, meant that in practice the Uncovenanted officers of the Post Office should ordinarily hold *not less than half* of the total number of appointments of Postmaster-General. In this view they ought to-day to be holding at least 5 out of the existing 10, whereas they hold only 4. Their loss, therefore, on these much-prized posts is at least one appointment.

As above stated, 4 out of 9 appointments of Deputy Postmaster-General were abolished. The claim, therefore, of the Superintendents is that their total loss of the chief posts is at least 5. If it be objected that Government have after the abolition of the 4 appointments of Deputy Postmaster-General created 4 similar appointments of Inspectors-General, Railway Mail Service, and one of Assistant Director-General, all of which are at present held by officers promoted from the Superintendents' cadre, the objection, it is submitted, has no force. These 5 new appointments have all been solely necessitated by the constant increase and development of work in the Railway Mail Service and the Director-General's Office, work which always has been and still is supervised, and administered by officers from the ranks of Postal Superintendents. Statistics show beyond all contradiction that had not the Deputy Postmasters-General been abolished, the steady growth of business would have required the creation of the appointments referred to above, which, therefore, can from no point of view be regarded as in substitution of these abolished posts.

The nett loss, therefore, is, as stated, five chief appointments, which has also retarded the much needed flow of promotion amongst Superintendents.

The Superintendent of post offices is the sole administrative officer representing his Department in a Division which usually includes two or more Revenue Districts. He has therefore to associate on terms of equality with officers and Heads of other Departments and to maintain the dignity and repute of an important service, which enters intimately into the daily life of all classes of the public. To enable him to uphold his position and discharge functions from which he cannot escape, it is essential that his remuneration should be substantially increased. It is worthy of notice that the number of Superintendents is increasing and, with the continual development of Post Office business, must further increase. This increase is out of all ratio to that of the higher or prize appointments. While the aspirants for such prize appointments multiply, the number of these appointments practically remains stationary. Recognising that these higher posts must be reserved for the most expert of the Superintendents, there remains a large body of these officers who must be precluded from any fair expectation of preferment. To such men now, and in a greater degree in the future, their pay is inadequate both in itself and in its effect upon their pension. For such men the proposed enhancement of pay appears to be a reasonable and pressing need.

Subhead 14.—Gazetted Postmasters are executive officers. Their duties are many and difficult. They are personally and directly responsible for the custody, account and disbursement of very large sums of money. This increasing burden of responsibility furnishes sufficient grounds for the request that Postmasters who, like other members of the service, are met with the constant rise in the cost of living, should have an increase in their pay.

Subhead 15.—The Deputy Postmasters-General and Inspectors-General reside mainly in the largest towns where the cost of living is higher than in the Mufassal. Their responsibilities are greater, their duties socially and departmentally are exacting in consequence of their higher position. They also hold, in the Railway Mail Service, entire charge of circles containing a number of Superintendents' Divisions, where they in many respects exercise the powers of Postmasters-General.

75,228. (*V.*) *Conditions of Leave* (*see also paragraph* 75,218). *Subheads* 16 *and* 17.—These must be read together. Shortly the proposal is that in every 32 months, 4 months' privilege leave should be earned. The present system permits 1 month in every 12 to be earned up to a maximum of 3 months in every 36 months. The two resolutions combined formulate the proposal that in lieu thereof privilege leave should be earned at the rate of 1 month in every 8 months up to a maximum of 4 months.

The reasons for this concession are stated in resolution 17. The request for the longer holiday in the shorter period rests upon the fact that generally throughout the postal service the officers work on Sundays as well as on holidays. Broadly speaking, all officers lose about 30 days in every year which are enjoyed as holidays by other Departments of the Government. The proposed scheme asks that one-half of these lost days of rest be restored.

Subhead 18.—The restriction on leave under the existing rules, which forbid an officer who has returned to duty to avail himself of leave either already due to him or which he may subsequently earn, unless and until he shall have been on duty for certain specified and varying periods, are vexatious, embarrassing and unreasonable. Reference is invited to Articles 260 and 338 of the Civil Service Regulations. Subject always to the exigencies of the public service, every officer should be entitled to avail himself forthwith of all leave which, at the time of his application for leave, he has actually earned.

One example will illustrate the hardship complained of. By Article 338 above quoted, if an officer entitled to 2 years' furlough after 18 years service goes on leave for one year only and returns to duty, he is compelled to serve another 8 years before he is permitted to enjoy the balance of his one year's furlough, although he has already earned it by duty rendered to the State. The only device by which this can be evaded is for the officer to apply for leave on medical certificate when he is not sick. If, in such circumstances, the leave is granted, the privilege is won on a false issue; if it is refused the officer is robbed of his leave. In neither event is the Government well served. Neither result can be ethically upheld. It is morally impossible to uphold differential treatment applied to officers who fall under the European Service leave rules.

Subhead 19.—Short leave rules apply at present equally to all Government services. Long leave rules vary for European and Indian services, to the advantage of the former. They are not, however, founded on any purely class distinction. Thus, Deputy Postmasters-General, whether Europeans or Indians, fall under the European leave rules. All officers below the rank of Deputy Postmasters-General range under the Indian Service leave rules. Under these the maximum furlough for an officer's whole service is 2 years. The first furlough cannot be taken until the completion of 10 years' service and a second furlough until after a further service of 8 years. These rules press harshly upon the senior officers, who, by that time (generally 20 years and more), have earned, and in many instances have exhausted, the full period of their furlough. For instance, if an officer has a family of his own, the members of which are being educated out of India, he is unable to share in his children's society or personally to supervise their education at a period when the presence and influence of a father are most needed. To obviate this, it is proposed that officers drawing Rs. 500 and upwards should enjoy the privilege of the European Service leave rules, which entitle an officer to longer periods of leave at shorter intervals. Under the present rules officers below the rank of Deputy Postmaster-General can only claim 2 years' furlough in their whole service, which may extend to 35 years. Of this they can take 1 year after their first 10 years' service and another after a further service of 8 years. Should they serve, as they often do, a further 14 years after they have used up their 2 years' furlough, they are debarred from all further furlough. Their only hope then is to try their chance of being sent home on sick leave when not sick.

Subhead 20.—The rule to-day for reckoning service for pension, itself not due till after 30 years' service, is as follows. During that period only 4 years' leave on allowance count. This is the maximum. If the whole 4 years' leave is spent in India, only 2 years count. If the whole is spent out of India, the whole counts. If a portion be spent in India and a portion out of India the latter portion will count in full, and of the former not more than 2 years as a maximum. This is unfair to the officer to whom the Indian Service rules apply, and to any officer who, owing to financial or other rersons, is unable to spend his leave out of India. From this point of view 2 years' furlough counting for pension is wholly insufficient in consideration of the strain of work. The conditions under which such an officer labours are the same as those of an officer who spends his leave out of India. The present rule prolongs unfairly the period of effective service which the officer who spends his leave in India must put in for pension. While one officer who spends all his leave out of India need only serve 26 years, the other who does not is forced to serve 28. This resolution must be read with the next.

75,229. (*VI.*) *Conditions of Pension* (*see also paragraph* 75,219). *Subhead* 21.—The rules, as they now stand, permit only 3 years of leave with allowances to count towards pension earned after 25 years' service, and they lay down that if these 3 years are spent in India, only one shall count towards pension; if all be spent out of India all count.

An officer who spends 3 years' leave in India must, in order to earn his pension after 25 years' service, render an actual service of 24 years, whereas the officer who spends his leave out of India renders only 22 years' service. The combined effect of Resolutions 20 and 21 is to level up the differences pointed out and to place all officers on a footing of equality.

Subhead 23.—A maximum pension of Rs. 5,000 a year is inadequate to the needs of those officers who earn it. A fair proportion of the officers who attain their pension are in fact European though falling technically within the definition of "Natives of India." A definition, however, cannot change a fact, and the fact remains that these Statutory "Natives of India" are Europeans of European education, surroundings, traditions and needs. Like their non-domiciled European brothers in the Department their relatives live either in Europe or the British Colonies and as a rule when they themselves earn their pension they leave the country. To such men a pension of Rs. 5,000 means a ceaseless scrutiny of ways and means. Nor need this argument be confined to the European element. In several instances Indian officers of the Department have adopted European habits of life and are educating their children in Europe. These instances will increase in number year by year to a marked degree. Even the Indian officer who has not followed English habits of life in their entirety has often, by virtue of his official position, been compelled to adopt a standard of living which entails many extra expenses. It is a hardship that at an age when such habits have become crystallised into a custom he should be required to readjust his mode of living to an insufficient pension. To all these the same argument is applicable. The present pensionable limit was fixed half a century ago. In the interval the purchasing power of the rupee has been greatly diminished, the necessaries of life have been nearly doubled, and many of its minor luxuries placed permanently out of reach. The proposed increase would be but an equitable recognition that here, as elsewhere, there have been developments in the world which, while they are out of the control of the officers in the Post Office, weigh heavily upon the resources of these officers.

Subhead 24.—The request for permission to free from existing restrictions commutations of an officer's pension is based upon the feeling that these restrictions are inquisitorial and therefore objectionable. While recognising the wisdom of the policy upon which pensions and their freedom from attachment is founded and admitting that that policy should be supported, it also recognised in the Department that permission to commute a portion is rarely conferred except on reasonable grounds. The desire to advance a portion to a child in marriage, to purchase land which shall become the family homestead, to educate growing children, even to be quit of an accumulated burden of debt, is a commendable desire. The owner of the pension may safely be trusted as to his intent. Government have frequently stated that pension is deferred pay. That profession is accepted as sincere. If such be the case, it follows that the person who has earned such deferred pay should be able to lay his hands upon at least a portion of it for a conscionable purpose.

So, too, if an officer of 50 years of age and upwards dies in service before touching his pension, it does not seem unreasonable that his widow and children should have some claim upon a portion of that which authority has itself labelled as deferred pay. The exemption in such a case from the burden of a pension is a pure matter of gain to Government. The loss falls entirely upon the officer's family. The objection sometimes officially expounded that officers should make provision for their family during their lives is in the majority of cases a counsel of perfection. Where a widow—the resolution deals only with the case of the widow and children—applies for a commuted portion of her husband's pension, it may, despite such counsel, be *prima facie* and, as a rule, truthfully accepted, that her petition for help is due to unfortunate circumstances outside her husband's control. But, even were it not so, the request comes with exceptional force from persons suddenly deprived of the assistance of the chief breadwinner whose pension, it has been conceded, represents earnings in consideration of the postponement of which his salary throughout his service was based. The widow's claim is not purely eleemosynary; it is rooted upon an equity which cannot easily be ignored.

75,230. (*VIII.*) *Relation of Service with other Services* (*see also paragraph* 75,220).

Sub-heads 27, 28, *and* 29.—The Public Service Commission of 1887 recommended that the highest posts, exclusive of the Director-Generalship, in the Post Office, should be divided at least equally between the Indian Civil Service and the Department. Out of 10 such posts, the Department should hold at least 5. It has already been shown (*ante Subhead* 14) that the Department at the present moment hold only 4 against 6 held by the Indian Civil Service. Lately, 1 of these 6 posts, being temporarily vacant, has been filled by the appointment of a Superintendent of Telegraphs as Postmaster-General. The post should have fallen to the Post Office, under the recommendation of the Public Service Commission. The introduction of an officer from the Telegraph Department to officiate is, presumably, in anticipation of his confirmation. To that an emphatic, if respectful, protest is immediately necessary.

The Telegraph Department is gradually to be absorbed, it is believed, into the Post Office. Such officers as are at present in the service of the Telegraph Department have had, it is also believed, their prospects assured by the promise that they shall not personally suffer. Though their Department is numerically inferior to the Post Office, they hold 11 appointments rising from Rs. 1,500 to Rs. 2,250, as against 10 appointments rising from Rs. 1,500 to Rs. 2,000 in the Post Office, of which 6 are at present held by members of the Indian Civil Service. The obstacles to promotion in the Post Office have already been dealt with. A new obstacle now threatens by importation from the Telegraph Department. Resolutions 28 and 69 are directed against this new danger. It is essential that an effective protest be lodged while the end of the inserted wedge is still thin.

75,231. (*IX.*) *Other Points.*

Sub-head 30.—The present Guarantee Fund was started in 1883. It was fed by deductions from the salaries of all officials below the rank of Deputy Postmaster-General. At present no deductions are being made. Its object was, *inter alia*, to guarantee Government against loss arising from the negligence or dishonesty of Post Office officials up to a maximum on each loss of Rs. 3,000. It now amounts to nearly 11 lakhs of rupees in Government Securities and cash on which interest accrues annually. The uses to which the interest is put include many deserving objects, but it is under Government control and sanction, and the chief characteristic of the amount expended for the benefit of the subscribers is its disproportion to the interest which accrues yearly.

It is now proposed that the Fund should be handed over to a carefully selected departmental Committee for the benefit of the officials of the Department. Such a Committee being naturally in closer touch with the wants and claims of the men among whom they live and move, would be in a better position to put the money placed at their disposal to a more liberal use. A statement is hereto annexed as B showing the transactions of the Guarantee Fund for the year 1911–12. It forms an interesting comment upon the request now preferred.

Extraordinary as it may seem fines inflicted upon the subordinate staff are credited to Government. In view of the dubious legality of this procedure, it is suggested that fines should be handed over to the above Committee for the general benefit of the subordinate staff.

ANNEXURE A.

(*a*) The Statement furnished by the witnesses was for 1911–12 : the figures for 1912–13 were afterwards obtained from the Director-General of Posts and Telegraphs.

(*b*) Differs from the closing balance shown in the Annual Report for 1911–12 by Rs. 251, owing to that amount having been charged to the Fund after the publication of the Report.

(*c*) Market value on 31st March, 1913, was Rs. 7,46,119.

3 *November* 1913.] [*Continued.*

Messrs. McMINN, SINCLAIR, and SRI RAM called and examined.

75,232. (*Lord Ronaldshay.*) Mr. McMINN said he was one of the witnesses elected by the non-Indian Superintendents to give evidence. He joined the Department in September 1904 as a Superintendent direct, and had been a Superintendent since in different Divisions, in the Punjab only.

Mr. SRI RAM said he joined as a Probationary Superintendent in September 1904 at Rs. 100 a month. After 16 months he was appointed permanent Superintendent, and sent to take charge of the Division which he was holding before he was appointed. He was elected by the Indian Superintendents as one of the four witnesses to appear before the Commission.

Mr. SINCLAIR said he was appointed Reserve Superintendent in 1907 on Rs. 200, and was confirmed after passing the departmental examination. He had been Superintendent ever since, chiefly in the United Provinces. He had been elected as a representative of the non-Indian Superintendents.

75,233. Mr. McMINN said the written statement was drawn up on behalf of the Superintendents and Gazetted Postmasters, and although the Superintendents of Burma did not attend the Conference which was held, they had signed the written statement.

Mr. SRI RAM believed that at the Nagpur Conference the Burmans appointed the Punjab men as their representatives. There were 23 officers present at the meeting which drew up the Memorandum, only 2 being Postmasters. Each circle selected their representatives to attend at Nagpur, and he could not explain why so few Postmasters were selected.

Mr. SINCLAIR said the Gazetted Postmasters were very much fewer than the Superintendents, and therefore the representatives were less.

Mr. SRI RAM said that 13 Indian officers were present at the Conference out of 20, so that the written statement fully represented the views of the Indian members of the Conference.

75,234. With regard to the proportion of direct appointments to promotions from the subordinate staff in the case of Superintendents, Mr. McMINN said that of the 172 now on the list the proportion was 40 per cent. direct and 60 per cent. promotion. If there were two direct appointments to each promoted appointment, that would secure the interests of the Probationary Superintendents, who were often kept waiting for a permanent post owing to promoted subordinates going over their heads. This was because men from the department did not go through a probationary period. To have a larger proportion of direct appointments would also ensure the recruitment of a better class of men as Superintendents. This also appeared to be the opinion of the Directorate, as was evident from the fact that of late years the proportion of direct recruits had borne a rapidly increasing ratio to those appointed from the department. The Probationary Superintendent had to wait for appointment for something like two years, and it was thought that from one year to two years would be sufficient for his training and probation. At present a man had to spend too much time as a Probationary Superintendent.

75,235. With reference to the request made in the written statement that the Probationary Superintendents should be on one list instead of on circle lists, Mr. McMINN said he could give no specific instances of inequalities that had arisen as the result of the present system, and personally he did not agree fully with what was stated in the written statement on that point.

Mr. SRI RAM also said he did not agree personally with this portion of the written statement.

Mr. SINCLAIR remarked that he could not give specific instances, but he agreed with what was said in the written statement; he thought that Probationary Superintendents should be borne on one general list; otherwise the Department would be provincialised.

75,236. With regard to the distinction drawn in the written statement between the Indian direct recruits being graduates and members of the domiciled community undergraduates, Mr. McMINN said by undergraduates was meant men passing the Matriculation Examination, and not necessarily men going to the University. There were really very few Universities to which an Anglo-Indian could go at present, and hostels were not provided for the Anglo-Indians as they were for the Indians. For instance, at Lahore, the Indians could live in a very much cheaper manner than members of the domiciled community. The necessity for the distinction was based entirely on the educational facilities open to the two classes of officers.

Mr. SRI RAM thought that in time to come the distinction would disappear, but as at present the facilities were not the same the distinction might continue for some time.

Mr. SINCLAIR believed the reason for the distinction was that the European School Code provided that Europeans should be educated up to the Matriculation or Cambridge Local standards.

75,237. Mr. McMINN was of opinion that the present age limits for direct recruits to Superintendentships were suitable, and suggested selection first and competitive examination afterwards, the system that at one time existed in connection with the Police in India. The preliminary selection might be made by the Postmasters-General and be confirmed by the Director-General. It was not a selection for the post but selection for the right to go up for examination. The considerations to be borne in mind in making the selections should be somewhat the same as now, educational qualifications and good family, men well known in the Province and able to exercise a good influence. The number of candidates selected would have to be two or three times as large as the posts to be filled. At present there were numerous applications, and if the positions were advertised there would be a very much larger number, and it would not be necessary to weed out the applicants by examination. At present there was no regular system for the recruitment of Superintendents. There appeared to be no fixed pay for Probationary Superintendents. Out of those at present on the cadre of Probationary Superintendents some drew Rs. 80, some Rs. 100, one Rs. 140, one Rs. 150 and one Rs. 200 a month. It was unreasonable to expect to get good men on such a low monthly pay as Rs. 80.

Mr. SRI RAM agreed.

Mr. SINCLAIR said he did not believe in competitive examination at all. He thought that selection by the Postmaster-General and confirmation by the Director-General was quite sufficient, *i.e.*, the present system.

Mr. SRI RAM said opinion in the Conference was fairly divided on the question, especially on the proportion of the recruitment from outside and from the department, and also on the question of examination. There was a fairly strong opinion for examination after selection. The idea appeared to be that good social status, high educational qualifications, and strong physique should be the qualities insisted upon.

75,238. With regard to allowances, Mr. McMINN said officers of the department did not halt so long as officers belonging to other departments, and sometimes did not halt for twenty-four hours, and therefore did not draw a daily allowance at all. With regard to transfer allowances, they claimed the reimbursement of the actual expenses incurred. There was also the question of house accommodation. It was sometimes very difficult to get houses in military stations. He knew of an officer who changed his bungalow three times in one year, and in another year seven times, because it was required by a military officer. It was a grievance which was more or less common in many other departments.

Mr. SRI RAM said every other department received Rs. 5 a day, whereas the Postal Department only

received Rs. 4 a day. Almost every department was provided with tents except the Post Office. In many cases officers of that department had to inspect places where no bungalows existed, and had to do the double journey to get to get back to a bungalow, and then were refused travelling allowance.

75,239. With regard to pay, all three witnesses stated that they preferred a time-scale, Mr. McMINN observing that there could be no inequalities in that method.

Lord Ronaldshay then pointed out that in the witness's written statement it was asked first that Superintendents of Post Offices should be placed on a graded scale of pay, and that failing this a time-scale of pay, starting from Rs. 300 and rising to Rs. 900 should be introduced. In reply Mr. SRI RAM said that Conferences were held in different circles, and all decided on the time scale. Somehow or other the idea went round that perhaps the demand might not be accepted, and it would be better to put forward an alternative proposal, and it was only by an accident that the graded scale was put first. What was really wanted was a time-scale, and if that were not granted they would like a graded scale on the lines laid down in the written statement.

75,240. Mr. McMINN said that supposing a time-scale was granted it should be provided that special selection for promotion should take place at a particular stage, about the end of the twelfth year, for Superintendents. If a time-scale were introduced they would not press for officers to be retired compulsorily at the age of 55; that was only pressed for under the graded system. The creation of administrative posts to suit the requirements of promotion could hardly be granted, but pay might be raised on account of the fact that the chances of getting higher appointments were less. The prospects of obtaining higher appointments were less than they used to be; there were a greater number of Superintendents to fill the same number of posts, and therefore a smaller proportion of Superintendents would get those posts, and the others ought to be compensated by increase of pay.

Mr. SRI RAM and Mr. SINCLAIR agreed.

75,241. Mr. McMINN said it was not suggested that Superintendents of a suitable calibre were not obtainable at the present rates of pay. The work of the Post Office was getting more and more complex, and a better class of men was required. He did not think that from amongst the domiciled Europeans the department was getting quite the same class of men as it should get, and he attributed that to the present scale of salaries. Men went into the Railways or Finance in preference because the pay there was higher.

Mr. SRI RAM thought that in the case of Indians the class that was obtained was quite good, and even with increased pay the class would be the same. The men in the Service were not contented with the pay and prospects. Indians went into the Postal Service as freely as into the other Services.

Mr. SINCLAIR agreed with Mr. McMINN.

75,242. With regard to the differences in the pay under a graded system and a time-scale, Mr. SRI RAM pointed out that Rs. 300 to Rs. 900 was the scale of pay determined by most of the Provincial Conferences, but it only came in as an alternative proposal and nobody devoted much attention to it.

75,243. On the question of leave, Mr. McMINN said that the complaint in regard to Sunday attendance did not apply to Superintendents but only to Postmasters.

Mr. SRI RAM considered that it applied to a certain extent to Superintendents, as these officers had to make inquiries and investigations on Sundays.

75,244. With regard to the General Provident Fund, Mr. McMINN said it was open to officers of the department, and all who joined after a certain date were compelled to contribute to it.

Mr. SINCLAIR did not think so many men availed themselves of the privilege.

Mr. McMINN said that personally he preferred being insured in an ordinary Insurance Company.

75,245. On the subject of the amalgamation of the Telegraph and Postal Departments, Mr. McMINN said they had no knowledge of the subject as they had not been informed of the proposals. Superintendents certainly did telegraph work now, as they controlled a number of combined offices, and traffic questions were sometimes sent to them for enquiry. No extra payment had been made for the extra duties entailed.

75,246. With reference to the recommendation of the 1887 Commission with regard to the tenure of Postmaster-Generalships by officers of the department, it was a doubtful question whether the Commission meant that they should hold 50 per cent. of all Postmasterships, or that the number should be three. At the present time he thought they should have five.

75,247. With regard to the Guarantee Fund, it was contended that a Departmental Committee should manage the Fund, and that the greater part, if not the whole, of the interest accruing annually should be administered in the interests of the officers of the Department. The other witnesses agreed.

75,248. (*Sir Theodore Morison.*) Mr. McMINN said they desired at least 50 per cent. of the positions of Postmasters-General, but advanced no claim with regard to the Director-Generalship.

Mr. SINCLAIR said the general feeling was that the position should be always held by an Indian Civil Servant, and with that he was perfectly satisfied, and did not require any change. It was only a question of the Postmaster-Generalships.

Mr. SRI RAM said the Departments should have at least 50 per cent of the Postmaster-Generalships, and if the Postal Officers proved themselves efficient for a larger number of appointments it was not necessary that any should come from outside at all.

Mr. McMINN considered that in the future, with a good class of man coming in, and with increased pay there was no reason why the men belonging to the department should not make efficient Postmasters-General.

Mr. SINCLAIR also agreed to at least 50 per cent.

75,249. On the subject of allowances, Mr. McMINN said the halting allowance and daily allowance were the same, and were only given when an officer stayed at any office outside his headquarters for a full 24 hours. If the mileage allowance was paid the halting allowance was not. The contention was that on the railway an officer should get the daily allowance of Rs. 5 plus the single railway fare and the actual expenses on the railway. A man might spend the whole of his day practically at one place, and all he would get would be his railway fare to that place. On a long journey double first-class fare was received, and that was quite fair.

Mr. SINCLAIR said that when the railway fare was less than the daily allowance the full daily allowance should be given.

Mr. McMINN claimed that nothing less than the daily allowance should be given.

Mr. SINCLAIR said an officer should have the option of claiming the daily allowance or double first class fare.

75,250. (*Mr. Abdur Rahim.*) Mr. McMINN said it might happen that an officer would halt at a place and then move on to another place and no halting allowance was given. At present the words were "from midnight to midnight," and it was thought desirable that the words should be "twenty-four hours." In that case if an officer reached his destination at eight o'clock he would get a waiting allowance if he was still there at eight o'clock the next day.

75,251. On the question of educational facilities for Anglo-Indians, Mr. McMINN said an Indian had several Universities to which he could go, and although the Anglo-Indian theoretically could go there also, practically he was unable to do so. Very often he could not afford it. The Indian had hostels provided, but none

were provided for Anglo-Indians in the Punjab. In the term "Anglo-Indians" he included Eurasians. A certain proportion of Anglo-Indians were required for Frontier work, field Service work, and work for which Indians were not particularly suitable and for which they did not care.

75,252. (*Mr. Chaubal.*) Mr. McMINN said a large percentage of the Superintendents promoted from the ranks were Inspectors. The rest were either clerks in the Postmaster-General's office or Postmasters. The objection to promotion from Postmasters was that a Postmaster was generally promoted from the ranks, and was often a man who had joined the department on Rs. 15 or Rs. 20 a month, and it could not be expected to get a very good class of man on that pay. Also if Superintendents were taken from Postmasters they would be rather old on commencing their duties.

75,253. Mr. SRI RAM was of opinion that Probationary Superintendents should not be brought on to one general list. To take a Probationary Superintendent who had learnt his work in the Punjab, and send him to Bombay, would make the service very unpopular, as the Indian preferred to work, especially when on small pay, somewhere near his home. Most of the work of a Superintendent was done in English, and there was not much difficulty about language though there was a certain amount. In making enquiries and investigations Superintendents had to take the statements of men who did not know English and had to inspect branch offices, the work of which was conducted in the Vernacular.

75,254. With regard to the Indian Civil servant being the best man for the Directorship of Posts and Telegraphs, Mr. McMINN said he was an administrative officer without any bias or prejudice against the officers under him, and the department preferred to have a member of the Indian Civil Service in the position.

75,255. Mr. SRI RAM said it was well known that civilians would be employed, and the department merely wanted to protect themselves by seeing that at least 50 per cent. of the Postmaster-Generalships were given to the officers in the department.

75,256. (*Sir Murray Hammick.*) Mr. McMINN said the curriculum of the Anglo-Indian schools did not enable the candidates to pass the Matriculation or take degrees in the University so well as the curriculum followed in the Indian schools, and therefore very few Anglo-Indians went to the Universities. In the departmental examination of the Postal Service he did not think the Anglo-Indian passed as high as the Indian, but the examination test was not a very practical one.

75,257. Mr. SRI RAM said with regard to the popularity of the service, that the Post Office was not very well known, and he did not think it was popular. The Provincial Civil Service was popular because of the facilities it offered of rising and of being sent on Foreign Service in the different Native States. There were about 100 applications in the Post Office for one vacancy as Probationary Superintendent, and he thought by advertising a larger number of efficient candidates would be found.

75,258. (*Mr. Hutchinson.*) Mr. SRI RAM said the discontent in the department now was not chiefly because of slow promotion in the lower grades. Prospects were not very good generally, and in the lower grades the pay was not enough to allow a man to live decently.

The witness withdrew.

N. W. VAUGHAN, Esq.,* Postmaster, Lucknow, called and examined.

75,259. (*Lord Ronaldshay.*) The witness said he joined the Department in 1885, and was appointed Postmaster on Rs. 150 in 1887. He was specially chosen by the Conference to represent the views of the gazetted Postmasters. The written statement* put in did not deal with the case of the non-gazetted Postmasters, but the interests of the gazetted Postmasters were identical with those of the non-gazetted Postmasters. The former numbered only 34 altogether, and the smallness of the number explained why only two were represented at the Conference. They were satisfied that their views were adequately represented at the Conference with the exception of a few objections which were subsequently sent in. At the Provincial Meetings these objections were carried, but at Nagpur the questions objected to were thrown out as the majority at the Conference were Superintendents.

75,260. First-class Postmasters were selected from grades below Rs. 300 and Rs. 400; there were no direct appointments at all, and the reasons which had made direct appointment necessary in the case of Superintendents did not apply in the case of Postmasters. A first-class Postmaster had to be a very practical man, and must have learned his business by passing through the ranks, and it would therefore be impracticable to recruit first-class Postmasters by direct appointments. Suitable men, he considered, were not obtainable at the present rates of pay in the Postmaster's branch, and during recent years the personnel had been deteriorating owing to the fact that the pay was not sufficient to attract good men. The work was hard and trying both in hours and duties. The contention was that the pay of Postmasters of gazetted rank should be improved so as to put them on a par with Superintendents. If increased rates of pay were granted to Superintendents, the Postmasters hoped they would get the same in proportion. At present the pay of Postmasters went up to Rs. 800, and that of Superintendents to Rs. 600, and if the latter obtained Rs. 850, as proposed by them, the Postmasters would ask for a proportional increase in their pay. The pay of Postmasters depended entirely upon the volume of work in the office, and the importance of the town; at present there were only two officers on the higher grade of Rs. 600 to Rs. 800.

75,261. It had been urged that the posts of Postmaster and Superintendent should be interchangeable in order that the Postmaster might obtain the same number of higher appointments as the Superintendent was now getting. Postmasters were eligible for these higher appointments, but it had not been a settled procedure to appoint them, and if they were on the same list they would have a better chance. A first-class Postmaster practically did the same work as a Superintendent, as he had a number of town sub-offices under him, and the work was exactly the same, except that there was no travelling. In Lucknow he had 23 offices under him apart from the head office itself, and he administered those offices in every way as a Superintendent administered his own offices, but he only had to travel in the town. Rule 33, volume I., of the Post Office Manual, stated that, wherever the term "Superintendent" was used, it included a first-class Postmaster.

75,262. The Postmasters claimed to have special treatment with regard to leave because they had to work on Sundays and holidays. At present they had 10 holidays in the year, Christmas, Good Friday, New Year's Day, the King's Birthday, and six other gazetted holidays. The other branches of the service had about 30 to 32 days in the year, and half Saturdays or a full Saturday once a month, as well as Sundays, and it practically meant three months' holidays in the year. In the Post Office nearly every man had to be present on Sundays and holidays for at

* Mr. Vaughan was examined on the written statement put in by the three preceding witnesses—(*see* paragraphs 75,213–31).

least four hours. He quite agreed with the Director-General that 50 per cent. special leave might be a compensation.

75,263. With regard to the General Provident Fund, he believed that about 40 per cent. of the Postmasters joined it and he thought it was a good thing. There was no complaint among the officers who had to subscribe. He did not agree that a Departmental Committee should administer the Guarantee Fund; he thought it should be administered as at present by the Director-General, but a larger proportion of the interest should go towards the service, and he would like to see the money devoted to the families of Postal officers. A certain amount of the Fund at one time went towards meeting losses caused by robberies and so on, but it was found that that was illegal. He considered now that about half the money went towards meeting losses and half towards rewards.

75,264. (*Sir Murray Hammick.*) The witness said it should be left entirely with the Director-General as to whether the Guarantee Fund should be utilised to recover money losses. The income from the Fund was about Rs. 35,000, and before the Director-General could go beyond that sum he would have to refer the matter to the Government. A certain percentage of the Fund was returned to subscribers when they retired. He did not agree that a Superintendent was able to do the work of a Presidency Postmaster, although he could do the work of a big Post Office. Large Post Offices required men who had been engaged in the work for a long time, and it was not easy for Superintendents to learn it. A Superintendent would not work the office so successfully as a Postmaster, on account of lack of technical qualifications. If the higher appointments were exclusively reserved for Postmasters there would be no ground for objection. There was a feeling that Gazetted Postmasters' prospects were inferior to those of Superintendents.

75,265. (*Mr. Chaubal.*) The witness said that in 26 years he had risen from Rs. 150 to Rs. 500, the usual time taken to rise to that grade. There were Superintendents who had salaries of Rs. 500 to Rs. 600, the lowest being Rs. 200. A Superintendent took about 22 years to rise from Rs. 200 to Rs. 600. Whilst Superintendents might find it difficult to carry on the work of Postmasters, Postmasters in the superior grades could very well perform the duties of Superintendents. For the higher offices above Rs. 1,000 he did not think men who had risen from the ranks up to Rs. 600 would be too old. In the gazetted ranks the prospects were not considered good for Postmasters as compared with the prospects of Superintendents. He agreed that 50 per cent. of the Postmaster-Generalships must be held by the Indian Civil Service in order that the service might be well managed. It was the nature of the duties that required the various officers to be kept separate, but he did not agree that the higher Postmasters and Superintendents should be kept separate on that ground. The manager of the Dead Letter Office might be a Postal man, but the Head Clerk of the Director-General's Office required special Secretariat training.

75,266. (*Mr. Macdonald.*) The witness said that under present circumstances there was a slight diversity of interest between Postmasters and Superintendents, and he proposed to make the two offices interchangeable. It was not necessary for the scheme that Superintendents should also be appointed as Postmasters. He did not agree with the view that the duties of a Postmaster were such as to make him an incompetent Superintendent.

75,267. One of his objections to a Departmental Committee managing the Guarantee Fund was that in a few years' time the Committee would consist of men who had not subscribed to the Fund, and who would have no personal interest in it.

75,268. (*Mr. Abdur Rahim.*) The witness stated that the object of the Guarantee Fund was to provide a guarantee against losses. At one time the contribution was compulsory.

The witness withdrew.

At Delhi, Tuesday, 4th November 1913.

PRESENT:

THE EARL OF RONALDSHAY, M.P. (*in the Chair*).

Sir MURRAY HAMMICK, K.C.S.I., C.I.E.
Sir THEODORE MORISON, K.C.I.E.
MAHADEV BHASKAR CHAUBAL, Esq., C.S.I.
ABDUR RAHIM, Esq.
JAMES RAMSAY MACDONALD, Esq., M.P.

And the following Assistant Commissioner:—
H. S. STYAN, Esq., M.I.E.E., Director of Telegraphs, Punjab Circle.

M. S. D. BUTLER, Esq., C.V.O., C.I.E. (*Joint Secretary*).

C. STREATFEILD-JAMES, Esq., M.I.E.E., Director of Telegraphs, United Provinces; and
I. C. THOMAS Esq., M.V.O., M.I.E.E., Director of Construction, Telegraph Department.

(*These two witnesses were examined together upon the written statement given below.*)

Written Statement containing the Corporate Opinion of the Imperial Service Officers of the Indian Telegraph Department.

75,269. We, the under-mentioned* Imperial Service Officers of the Indian Telegraph Department, wish to invite the attention of the Royal Commission on the Public Services in India to the following conditions which we consider call for remedial measures.

75,270. **(I.) Methods of Recruitment.**—In view of the present position of the Department in connection with its proposed amalgamation with the Post Office it is difficult to offer any remarks on this point. We

* This written statement was signed by the following officers:—
Messrs. C. Streatfeild-James, R. O. Lees, I. C. Thomas, H. S. Styan, R. T. Gibbs, and R. Meredith, Directors of Telegraphs; Messrs. H. Mayston and L. Truninger, Officiating Directors of Telegraphs; Mr. W. Sutherland, Officiating Postmaster-General (Superintendent of Telegraphs); Mr. J. C. Shields, Officiating Electrical Engineer-in-Chief: Messrs. C. W. Sowerby-Coo, S. Babington, H. S. Pike, G. E. Landon, G. P. Roy, G. W. Talbot, M. F. C. Smith, E. L. Bagshawe, B. C. Wernick, Sunder Singh, J. G. Berrie, M. E. Nigel Jones, C. T. Williams, F. T. de Monte, W. D. Macgregor, J. N. Parker, M. L. Pasricha, and G. A. Hopkins, Superintendents of Telegraphs; and Messrs. S. R. A. Wood, M. F. D. J. Sice, J. Fairley, C. Landon, C. Lawton, G. Burlingham, J. North, E. Green, R. S. Purssell, A. C. Board, G. B. Power, A. P. Manning, J. G. P. Cameron, W. S. McMillan, G. E. O. de Smidt, and C. N Garnier, Assistant Superintendents of Telegraphs.

have however been given to understand that under the scheme of amalgamation now under the consideration of the Government of India it is proposed to divide the superior staff of the Department into Engineering and Traffic sections—the former to be recruited in England and India, and the latter wholly in India, with perhaps one or two exceptions. Owing to the special technical requirements of the Telegraph Department and the lack of means of acquiring knowledge of the kind required in India we are of opinion that for many years to come three-fourths of the Engineering staff should be recruited from England, that one-eighth should be recruited from qualified subordinates and one-eighth from Indian Engineering Colleges. We are also further of opinion that all apppointments should be subject to open competition from amongst nominated candidates. It is considered that, in England nominations should be given by the Secretary of State and in India by his Excellency the Viceroy.

75,271. **(II.) Systems of Training and Probation.**—We feel that it is of the utmost importance to give the young officers of the Department a thorough training in the duties that they will have to perform.

We accordingly recommend that in future all Engineering Officers whether appointed in England or India should first be attached to the office of the Electrical Engineer in Chief for instruction in every branch of departmental technical work, theoretical and practical, including the more important processes in the Telegraph Workshops. Subsequently arrangements should be made to complete their Engineering training including instruction in the system of Accounts in force n the Department. All officers should be required to pass, within three years of their joining the Department, in addition to the existing examinations, a professional examination on the lines of that now in force in the Public Works Department.

We feel that in the past the omission to give young Officers of the Department any training in administration has severely handicapped them throughout their service. We consider that it is most important to entrust every officer with, and make him responsible for definite duties, and that this sense of personal responsibility cannot commence too soon. As far as possible they should also be attached to the Headquarters offices of the Director-General and the Heads of Circles. Everyone should also be encouraged to keep himself thoroughly up to date in his profession by the liberal grant of Study Leave in Europe and America.

75,272. **(III.) Conditions of Service.**—A very large majority of the Imperial Service Officers at present in the Department were specially trained at Coopers Hill for service in India and the remainder are Electrical Engineers who have now been so long out of touch with the general branches of their profession that it is quite impossible for them, with few exceptions, to look forward to employment in those branches should they be compelled to leave the Telegraph Department; consequently they view with special apprehension anything which is likely to interfere with their present prospects. We have been given to understand, however, that, in the scheme for the amalgamation of our Department with the Post Office, which we believe is now under the consideration of the Government of India, our prospects have not only been safeguarded but that fair treatment has been accorded to us, including some compensation for the loss of the appointment of Director-General of Telegraphs, and consequently we do not wish to allude further to this matter. In view, however, of that loss, and that in the past the permanent head of the Post Office has invariably been a member of the Indian Civil Service we wish for an assurance that should one of the officers at present in the Telegraph Department be considered to be capable of efficiently filling the post of head of the joint Department he would be eligible for that appointment.

75,273. **(IV.) Conditions of Salary.**—The salaries admissible under Department of Commerce and Industry Resolution No. 913–918–115, dated the 2nd of February 1910*, are considered to be generally suitable and we have no remarks to offer beyond again drawing attention to the serious loss that the Department has sustained in consequence of the abolition of the appointment of Director-General of Telegraphs. In view of this we consider that the pay of the head Officer of the Engineering or Traffic branches, whichever is senior, shall not be less than Rs. 3,000 per mensem if the amalgamation scheme is brought into operation, inasmuch as we were recruited with the definite expectation of attaining such an emolument.

75,274. **(V.) Conditions of Leave.**—It is considered that the conditions on which leave is taken, and the allowances during leave, should be improved. Frequently an Officer applies for leave and, owing to shorthandedness or other reasons, his request cannot be granted. In consequence of this some part of his privilege leave often lapses owing to the limit of three months up to which such leave can be accumulated. Presumably this restriction is in the interests of economy to the State but we respectfully submit that this result is effected at the expense of the individual officers. There appears to be no adequate reason for continuing the limit and we therefore desire to urge strongly that either this should be abolished and that it should be permissible to accumulate privilege leave to any extent or that if this is not found practicable suitable compensation should be given for all such leave which is lost. In our opinion suitable compensation would be the grant of a month's furlough on full pay for each month's privilege leave forfeited. In this event Government might have the option of ordering an Officer to take leave should his health and and work, in their opinion, demand it.

We also consider that an officer should be allowed to combine any leave with any other leave due to him and be granted this leave irrespective of when he was last on leave provided that he can be spared. Periods of leave on half-pay should also be commutable into leave on full-pay of proportionately reduced duration.

At present under Article 314 (*a*) of the Civil Service Regulations, members of the Indian Civil Service on furlough in England are paid leave allowances on certain conditions at a minimum rate of 500*l.* a year and at a maximum of 1,000*l.* a year. In the case of the Telegraph Department the maximum rate is 800*l.* a year, but there is no minimum except in the case of leave on Medical certificate. In the case of young officers, especially if they are married, these furlough allowances are wholly inadequate; many officers thus do not take leave as frequently as they might and their efficiency is impaired. For this reason we urge that the Department should be granted a minimum furlough allowance of 500*l.* a year and that the maximum should be raised to 1,000*l.* a year, subject to the conditions prescribed in Article 314 (*c*) of the Civil Service Regulations, and that furlough allowances should be calculated on half the salary at the time of taking furlough instead of on the average of the previous three years emoluments.

We also consider that the present restriction under which an officer cannot retire within three months of taking privilege leave without forfeiting such leave should be removed.

75,275. **(VI.) Conditions of Pension.**—The scale of pensions at present in force is entirely inadequate for our needs. Memorials to the Government of India have been submitted, but up to the present nothing has been done to improve matters. We understand that in England it is recognised that pensions are deferred pay and taking this into consideration, and the fact that of late years the cost of living both in England and in India has increased enormously, a fact which has been recognised as regards this country by the increased pay which has recently been sanctioned for us, we consider that the case for the grant to us of enhanced pensions is overwhelmingly strong. We therefore strongly urge that pensions on the

* Not reprinted.

following scale should be sanctioned for voluntary retirement:—

		£
On completing 20 years' service	thirty sixtieths of an officer's average emoluments for last three years subject to a limit of	350
„ „ 21 „ „		380
„ „ 22 „ „		410
„ „ 23 „ „		440
„ „ 24 „ „		470
„ „ 25 „ „		500
„ „ 26 „ „		540
„ „ 27 „ „		580
„ „ 28 „ „		620
„ „ 29 „ „		660
„ „ 30 „ „		700

The amount of leave with allowances counting for pension under Article 408 of the Civil Service Regulations also requires increasing. In our opinion a suitable scale would be:—

In 10 years' service - - -	1 year.
„ 15 „ „ - - -	2 years.
„ 20 „ „ - - -	3 „
„ 25 „ „ - - -	4 „
„ 30 „ „ - - -	5 „
„ 35 „ „ - - -	6 „

We do not propose to make any recommendations for the increase of the invalid pensions at present admissible as while they are also entirely inadequate fortunately very few officers have had to retire on them.

In addition to the above the special additional pensions, which are at present admissible to officers who have completed a term of approved service in certain administrative charges, should be continued.

We understand that in England retired Civil Servants are allowed the privilege of commuting a quarter of their pension for a lump sum unconditionally without a medical certificate and without specifying the object for which commutation is required. In a service like ours, in which the widow and children of a deceased officer are entitled to no pension from the State, it is very necessary that a similar privilege should be allowed to us so that their condition may be somewhat ameliorated. We accordingly strongly urge the desirability of this concession and in addition would ask that in the event of an officer dying before taking his pension or within a year of taking it, his family may receive the lump sum which he would have received had he commuted a quarter of the pension to to which he was entitled on the date of his death. Such a privilege would be a real boon to all officers and would materially assist them in the task of making adequate provision for their families, Needless to say since our pensions are paid in England at the rate of one shilling and nine pence to the rupee this commutation should be calculated at the same rate. It might also be considered whether it should not be permissible to commute more than a quarter of a pension. We understand that recently an officer of the Finance Department was specially permitted to commute one-third of his pension and we strongly urge that all officers be allowed to commute their pensions unconditionally up to a similar amount.

75,276. **(VII.) Such limitations as may exist in the employment of Non-Europeans, and the working of the existing system of divisions of services into Imperial and Provincial.**—As in reply to question I. (paragraph 75,270) we have said that we consider that 75 per cent. of the engineering superior staff should be recruited in England and as we consider that few, if any, Indians would go through the necessary workshop and technical training in that country, we are of opinion that it is unnecessary to fix any proportion provided that the recommendation under which 75 per cent. of the staff are recruited in England is accepted.

We are of opinion that the existing division of service should continue but we consider that in the event of a Provincial Service Officer being selected as a Director of Telegraphs, he should be allowed to draw the same pay as an officer of the Imperial Service, We do not consider that the same concession should apply in the case of Superintendents and Assistant Superintendents as appointment to the administrative grades is made by selection whereas in the case of the other grades this is not so.

75,277. **(VIII.) Relations of the Service with the Indian Civil Service and other Services.**—We feel very strongly about the subordinate position which the Department of late years has had to take up. At present Directors of Telegraphs rank in the order of precedence far below Postmasters-General and Officers in other Departments with similar powers and responsibilities. This has reacted on the lower grades and as a result the status and prestige of the Department has been lowered with a consequent sense of discouragement and loss of efficiency. We trust that this delicate subject will receive sympathetic consideration and that Directors of Telegraphs will be placed in the same position in the Warrant of Precedence as Postmasters-General.

75,278. **(IX.) Any other points within the terms of reference to the Royal Commission not covered by the preceding heads.**—The only other pressing questions to which we wish to allude are those relating to travelling allowance on transfer, daily allowance, and house and local allowances.

The travelling allowance admissible on the occasion of the transfer of an Officer is wholly inadequate. It is understood that in England the rules regulating the grant of travelling allowance on transfer are such that the actual expenses incurred by an Officer in breaking up his home and installing himself in his new one are borne by the State. In India, where transfers must of necessity be more numerous, there appears no reason why an Officer should, as at present, be put to a loss each time he is transferred. We would therefore ask that Officers on transfer be given actual expenses on similar lines to the rules now in force for Subordinates. If this cannot be granted it is considered that the minimum allowance which should be sanctioned is three first-class fares together with the free carriage of luggage up to 40 maunds in weight and of two ponies and a trap or motor, also incidental expenses for getting on board steamers and trains. The rules for journeys by rail should also apply in the case of steamer journeys during transfer. At present an Officer who has to make such a journey is entitled to only his bare fare for that part of his journey and from this is deducted a charge for his messing. Should he be a married Officer with a family he has himself to pay for their passages and on long journeys the expense of this may be considerable.

An Officer returning from furlough under the existing rules has to bear the cost of proceeding to his new station in addition to that of removing his personal effects from the station from which he proceeded on leave. This operates very hardly on Officers, as in addition to the heavy expense on return from leave they are often thereby precluded from the benefit of taking a return ticket by a Steamship Company. We accordingly recommend that in such cases Officers should be allowed travelling allowance from the port from which they left India or their old station, whichever is less, to their new station.

The rule in the Civil Service Regulations which lays down that an Officer must be absent for eight hours in a day before he can draw daily allowance is considered objectionable in that under Article 1067 it applies only to Officers attached to Railways and the Telegraph Department as a whole. The rates of daily allowance admissible to us are in excess of those drawn by Officers of similar standing in other Departments but in view of the fact that many of these Officers enjoy privileges which are not extended to us, the difference in the rates is often insufficient to meet the extra expense we are obliged to incur. We recognise that it may be impossible to increase the rates, but we consider that there is justification for excluding us from the ruling contained in the article quoted and we hope that it may be found possible to treat Officers of this Department in a manner similar to that accorded to Officers of other Departments not attached to Railways.

The effect of the house allowance rules at present in force for Officers stationed at Calcutta, Bombay and

Rangoon and the absence of any local allowances for the larger towns, which are the headquarters of the Local Governments (excepting Madras for which a small house allowance is admissible), is to make service at those places extremely unpopular as the increased cost of living there is tantamount to a punishment. At Calcutta, Bombay and Rangoon for Officers who have their families with them the present House Allowance is considered adequate as regards the cold weather season but there appears to be no good reason why the allowances during the summer should be reduced. House accommodation at these places is in most places procured on annual rents and not on rents varying with the season. Unmarried Officers or Officers who are married but have not their families with them are entitled to no allowance at all. An unmarried man feels the cost of extra house rent and the higher cost of living even although this may not be to the same extent as a married man while the latter who is alone, is not only hindered with the extra cost of high rents and expensive living but also has to pay rent for his wife or family at the same time wherever they happen to be. Generally speaking the work at these places is more important than elsewhere and thus the more efficient officers are adversely affected, in that, in addition to hard work, they have to live in very expensive stations for which they receive no compensation. It is considered that the only reasonable solution to this difficulty would be the provision by Government of suitable quarters at all the headquarter stations of the Local and Imperial Governments at reasonable rents and as a compensation for the more laborious duties, the grant of suitable local allowances. The need for house allowances would then disappear but in the interim it is considered that the grant of a reasonable house allowance to all Officers unconditionally is imperatively necessary. In this connection we also desire to invite attention to the system under which the less efficient Officers are given the easier appointments although their pay may be the same or larger than that of Officers holding more important charges.

Since the long delay in granting higher pensions and according more liberal treatment in the way of commutation and counting periods of leave with allowance towards pension, has occurred through no fault of the Officers concerned we would urge the desirability of applying any amelioration in these directions to all Officers who were in the service in August 1908 when the last Departmental general memorial on the subject of pensions was submitted to the Government of India—provided that they are still alive.

Messrs. STREATFEILD-JAMES and THOMAS, called and examined.

75,279. (*Lord Ronaldshay.*) Mr. STREATFEILD-JAMES said he came out to India on the 26th January 1879 as an Assistant Superintendent from Cooper's Hill, and had gradually worked up to the position of the senior First Grade Director.

Mr. THOMAS said he joined the Service in the year 1881 as an Assistant Superintendent, after a two years' course at Cooper's Hill, and had been through every grade up to Director, Second Class.

75,280. Mr. JAMES said that both Mr. Thomas and he had signed the written statement put in by their colleagues and were prepared to be examined on the views expressed therein. They had not been given an opportunity as a service, of criticising the scheme of amalgamation, and they had only had a few hints as to what was in it. In any change that might be made by the scheme they naturally asked that their prospects and interests should be guaranteed.

Mr. THOMAS said he had been consulted on all details in the scheme of amalgamation, but that the question whether he was in agreement with the whole scheme was rather a big one which he was not prepared to answer at present.

75,281. On the question of recruitment to the engineering branch, Mr. JAMES thought that his brother officers would be willing to go a little further than they had gone in their written statement in the way of admitting Indians provided that the latter were selected young in India and then given a training in England. The present idea was that nobody but a graduate in Engineering or Science should be selected in England. If Indians, who were graduates either in Science or Engineering, and who had had a training for three years in England were appointed, it would be possible for Indian and English officers to come out on one scale of pay. He was not satisfied with the technical training the Indian was able to obtain in India, as he had no opportunity of visiting works and seeing what was going on in electrical engineering. In India electrical engineering was in its infancy and to get really good men it was necessary to have them trained in England. He thought the State might lend money to cover the expenses of Indians, who went to England, and recover it from them afterwards. The training should be for two or three years. The men should visit various works and make notes, which should be examined from time to time to see whether the work was being done properly. During the training they would have to be given some sort of subsistence allowance. The men now had to pick up their knowledge in the best way they could. There had been Natives of India who had gone to England, and who had been trained at Cooper's Hill, and they were on the same list as the European officer, and this had proved a success.

Mr. THOMAS agreed with Mr. James.

75,282. Mr. JAMES then discussed the point whether recruitment in England should be made by examination or nomination. He did not press the suggestion in the written statement in favour of the former method. He believed the Public Works Department advertised for men, and that enquiries were made about applicants by the Secretary of State and a Selection Committee, and from what he had heard from Public Works Engineers he believed the men they had been getting out in that way had done very satisfactorily. If a proper educational standard were enforced, suitable officers, whether Indians or Englishmen, could no doubt be obtained by a process of nomination. In fact he would waive the idea of a competitive examination, provided that certain educational qualifications were made compulsory.

Mr. THOMAS on the other hand favoured competition between selected candidates. The examination might be for one post only, but he saw no objection in this.

75,283. Mr. JAMES then turned to the question of training. He attached great importance to a better training for young Engineering officers than was given at the present time. After a man had been in India for five years he became rusty, and should be given about six months' study leave to go to England and bring himself up-to-date. Such leave might be tacked on to any other leave which the officer had earned. During his leave he should receive half pay and his expenses, and should be made to send in periodical reports on what he was doing. It would be open to the Head of the Department afterwards to say whether he was satisfied or not. The details of such a scheme would require to be worked out carefully.

75,284. Mr. THOMAS then dealt with the proposal that recruits for the new Traffic Branch should come mainly from the subordinate ranks. He thought such an arrangement sound and worth trying.

75,285. *Lord Ronaldshay* then pointed out that it had been suggested to the Commission that in order to get rid of the distinction between the Provincial and the Imperial Services in the Telegraph Department,

all officers should get the same pay, but that those recruited in England should draw in addition an "Exile Allowance" which would bring their pay up to the present level.

Mr. JAMES said that if officers were recruited in the way he had suggested, it would not be necessary to do that, because practically all would be appointed in England. Naturally that would be an expensive matter. But he saw no harm in the proposed arrangement.

Mr. THOMAS pointed out that special provision would have to be made for promoted subordinates. Under the amalgamation scheme it was proposed that one-eighth of the Engineering Branch of the service should be recruited from the subordinate ranks, and it was hardly likely that such men would be given the same pay as the Indians who had been to England, and received special training. Some distinction would have to be made between these two classes.

75,286. With regard to the difficulty of getting leave, Mr. JAMES thought that was probably due to the insufficiency of the cadre. He himself had not suffered in the way of furlough, but he had not always obtained the privilege leave he wanted. During the whole of his service he had been granted 54·8 per cent. of the privilege leave he had earned, and had lost 45·2 per cent., either because he could not be spared or for some other reason. That was rather a large amount to lose in 35 years. In some measure it was probably due to his waiting to take three months' leave, whereas if he had applied for two months he might have obtained it. That frequently happened throughout the service. For one reason or another he could get no privilege leave between April 1884 and April 1892. He had thus earned 8½ months' privilege leave, but as he could only take three months of it, he lost 5½ months. Quite recently he asked for privilege leave, but could not be spared. When he left the department in a few months there would be four months' privilege leave due to him, which he should not be able to take.

75,287. With regard to pensions, the present pension rules provided for Rs. 4,000 after twenty years' service, and Rs. 5,000 after 25 years, and there were extra pensions of Rs. 1,000 for three years' active service in certain grades, and a second extra pension of Rs. 2,000, which used to be given to the Director-General and the next senior officer, after 3 years' active service as such. It was now only given to the next senior officer, so that at the present moment he was the only officer earning it. The two last pensions depended entirely on the approval of Government, so that a man might retire after 85 years' service on Rs. 5,000 pension only. The average officer at the end of 20 years' service would be 41 to 43 years of age, but he might be in bad health. As a rule, after 20 years' service, if a man was going to be any good at all he was a very useful man, and was not a man the Government wished to get rid of. The officers of the department asked for a pension extending up to £700 a year after 30 years' service, on a non-contributory basis. Thirty years was a very long service to put in away from one's own country, and when a man went home he wished to live in a little comfort. The Indian Army after 32 years' service received £700, and the Indian Medical Service received the same amount after 30 years and had extra pensions as well. The cost of living in England was very much greater than it was when the present pensions were put into force. He did not think there would be any objection on the part of officers if they were allowed to contribute towards a greater pension. The pension was really so small that it was impossible to commute a portion of it to any useful purpose. Moreover at present pensions were commuted at a very different rate from that on which the pension was paid. The pension was paid at 1*s.* 9*d.*, and the officer had to take the money for the portion commuted in this country and send it home at the current rate of exchange and therefore lost very considerably. They were allowed to contribute to the General Provident Fund but that gave a poor rate of interest. Government borrowed money at 3½ per cent. and gave it to their officers at 4 per cent., whereas they wished to have 6 per cent. The General Provident Fund was a recent creation and was not of much use to the senior man. He himself would get at the outside probably about £1,500 from the Fund. Every officer who joined the service now had to subscribe 6¼ per cent. and might subscribe up to 12½ per cent.

Mr. THOMAS said he did not agree with Mr. James' remarks about commutation. The majority of officers would prefer to have the privilege of commuting a fourth of their pension, as it would take the place of insurance to a certain extent. They should be allowed to commute at 1*s.* 9*d.* unconditionally. At present, a medical certificate of good health was necessary before commutation could take place and even then a man was not entitled to commute without the sanction of the Government. Officers had to show that they had been unable to make any provision for their family owing to smallness of pay or for other reasons, and it was rather difficult to prove the case. The object no doubt was to prevent a man from unnecessarily alienating a part of his pension and there was a certain amount of reason in that contention, but he thought men should be allowed to accept that risk.

75,288. With reference to house accommodation, Mr. JAMES said the difficulty in obtaining houses was much greater in certain places than in others; it was more felt in large places. In Lucknow no officer could take a house except on a year's lease, and if one was transferred in the middle of the lease one might be let in for six or seven months' rent. The old arrangement by which a house could be taken by the month was dying out in India. He thought the Government might provide official houses at a reasonable rent, and it would probably pay them in the long run. When he left Calcutta he had to pay the difference in the rent, after sub-letting, and that difference amounted to Rs. 1,050, which was rather a large slice out of his salary.

Mr. THOMAS agreed.

75,289. In the matter of transfer allowances, Mr. JAMES considered that the Government should recognise the existence of an officer's family, and should reimburse him for the cost of transferring himself and his family and a reasonable amount of household goods. He himself had had a great many transfers, one being from Calcutta to Lucknow, which cost him, including the Rs. 1,050 already mentioned, Rs. 1,860, and he received a travelling allowance of Rs. 105, so that he lost Rs. 1,755, and that did not include breaking up the house, miscellaneous cartage, and other small charges.

75,290. (*Sir Theodore Morison.*) Mr. JAMES said he knew of no officer who had attempted to commute his pension with an insurance company. Officers did not want to commute at the average expectation of life, and that was the point of the medical certificate to which they objected. They wanted to get more than an insurance office would give. Also the portion commuted was so very small that in the event of death it would not be sufficient to support the widow. The commutation was not a boon from the Government, if commuted at the average expectation of life, but was a very substantial boon if valued above the expectation of life. The boon that the widow should receive one-fourth the pension commuted when an officer died in service was a costly one, but on the other hand if the pension was not paid Government would not be very seriously hurt by paying a small commutation to the widow.

75,291. With reference to the qualifications for recruits, they should either possess a Science or an Engineering Degree. The possession of an Engineering Degree would enable a man to gain very rapidly all the information he required on any given subject. The proposal was to take a purely academic qualification and then train the man either in England or in

India. It would be very much better if he had a practical training in England before he came out. He would select men after they had taken their Engineering Degrees, at about 20–22, and give them either two or three years' training, probably two years would be sufficient. The Public Works Department recruits had not only to have an Engineering Degree, but also a year's experience of Works, and that would probably be part of the training in England. The Engineering Colleges in India generally did not give a training which would put a man on a par with the engineering training that was given in Glasgow or Manchester. Two years in visiting engineering works on the top of a training at Rurki would be quite sufficient; it would be a mistake to make it three years.

75,292. He had had experience of officers working under a time-scale and he could not agree that it caused men to become slack. If a man's confidential reports were unsatisfactory, his increments could be stopped, and that afforded quite a sufficient safeguard.

75,293. (*Mr. Abdur Rahim.*) The witness said he had not had any experience of Colleges other than Rurki.

75,294. With regard to the expenses of Europeans being greater than those of Indians in India, he admitted that the cost of living of educated Indians, who adopted European standards, had risen, but they had not the expenses involved in continually going to England and in sending their families there.

75,295. With reference to the remark in the written statement that few Indians had received technical train in workshops. he thought there was no disinclination on their part to visit large works, but they had not the opportunity given to them. Electrical works in Europe were on a very much larger scale than in India. As to whether the training should be two years or three, might be settled by the Head of the Department, but two years were absolutely necessary. He could not say what work promoted subordinate officers would be doing, but he took it they would come in at about Rs. 370 so as not to interfere with the promotion of officers already in the grades. At the time they were ready for promotion they would not have had the same experience as those recruited and trained in England, and it would probably be necessary to send them to England for a training when they were selected for promotion. He did not think there would be a great number of them.

75,296. (*Mr. Macdonald.*) The witness agreed that abstract scientific training could be given in Indian Colleges. The defect was really in the practical training in workshops. Telegraphy had become very specialised within recent years, and special training was required in telephone work, telegraph work, wireless work, lighting installations and power installations. There were no large workshops in India in connection with the Service and no experimental laboratories. Smaller workshops existed for instrument-making and repairing, but they were quite unable to give the necessary training.

75,297. With regard to the assertions in the written statement that it was most important to entrust every officer with, and make him responsible for, definite duties, and that a sense of personal responsibility could not commence too soon, what was meant was that recruits should have a good training in administrative work in offices as well as practical work. In the old days many an officer was in a sub-division probably for the first ten years of his service, and never saw the work in large offices, and consequently when cases were sent up to him he did not know how to deal with them from an administrative point of view.

75,298. As to the proposal for a salary of Rs. 3,000 as compensation for the loss of the Director-Generalship, that increase was simply asked for because a certain office had been taken away. The idea was that the senior officer, whether a Traffic or Engineering man, might be Director-General, if he was worthy of it, because he had lost an appointment which he had hoped to obtain. It was really compensation that was being asked for.

75,299. On the point of pay, Mr. JAMES said officers were willing to take the view that the Indian and the European should have the same scale, but that certain allowances should be made to the European.

Mr. THOMAS said the present arrangement was very objectionable from the point of view of the Indian, and it would be less objectionable to give 33 per cent. increase in the form of exile allowance than to give the Indian officer two-thirds the pay of the English officer, although it came to the same thing in the end.

Mr. JAMES said the Indian officer did not like to feel he was not receiving the same pay when he was doing the same work, but he would probably not object to the Englishman, as an exile, having a certain percentage added to his pay.

75,300. On the question of leave, it was a recognised thing that a man could accumulate three months and combine it with three months' furlough. When an officer had accumulated privilege leave, and it could not be granted to him, he should be allowed to go on accumulating it and take it when he could be spared. If the Government gave a month's privilege leave every year, and said that if it were not taken they would not guarantee that it could be taken later on, he thought the officer would have to take the leave when it was due to him.

Mr. THOMAS pointed out that the great distances in India made a month of very little use; a holiday meant probably several days' journey in going and coming and the breaking up of the house. The conditions were quite different from England, and a period longer than a month was necessary if the holiday was to be of any value.

75,301. Dealing with the subject of pension, Mr. JAMES said the officers had always been given to understand that it represented deferred pay and not a compassionate allowance, and it was upon that ground that they desired to commute one-fourth at their own free will. It should be recognised that the accumulation was the personal property of the officers to be disposed of by them, and that the Government had no power to interfere.

75,302. With reference to the remark in the written statement in favour of the distinction between the Provincial Service and the Imperial Service, Mr. JAMES said that this only applied if the present system of recruitment remained the same. If the system of recruitment were changed on the lines indicated by him, then the whole thing would be modified.

75,303. (*Mr. Chaubal.*) Mr. THOMAS said that under the new scheme of Amalgamation it was intended that the Engineering work of the Telegraph Department should become entirely dissociated from the Traffic work, which was at present performed by Telegraph Officers. The staff of Engineers would be lessened by more than a half, and the Traffic staff would have to be increased, but there would be a considerable saving in the personnel.

75,304. With reference to the Provincial Service, Mr. JAMES said that the present Provincial Service consisted of officers who are appointed in India. Men who would be considered to be in the Provincial Service at present would be one Director, some Superintendents, and probably some Assistant Superintendents and one Assistant Superintendent apprentice. A man recruited in India received two-thirds of the pay of the Imperial Service and was considered a provincial man.

75,305. Mr. JAMES then said that in years to come it might be possible to have one examination for the Engineering staffs of the Public Works and Telegraph Departments, but he did not object to such an arrangement. In any case the training afterwards would have to be on different lines. A man who took an Engineering degree would be able to devote himself either to Civil Engineering or Electrical Engineering, as the

actual mathematical and scientific training was more or less the same for both, the specialisation coming afterwards.

75,306. (*Sir Murray Hammick.*) Mr. JAMES thought that the men promoted from the subordinate establishment into the Provincial Service would probably come from the same class socially as the men who might be appointed direct. The present Provincial staff lacked a sound knowledge of practical work, although they knew the ordinary A.B.C. of the work. Even trained men became rusty if they did not go to England occasionally. It would be really economical from the Public Service point of view to send the men to England, and it would be worth while paying them to get a good education in England. They should be given every opportunity to turn out the best work. The work required in the Telegraph Department would be much better done by men who had had a better training than could be obtained in India.

75,307. With reference to furlough pay at 1*s.* 6*d.* and pension at 1*s.* 9*d.*, that came into force somewhere about 1893 after he entered the Service, and arose from the agitation of the Service itself. At first furlough allowance was paid at the current rate of Exchange but shortly afterwards it was raised to 1*s.* 6*d.* With regard to privilege leave, if an officer was not allowed to accumulate his leave, and was forced to take a month every year, in the event of his wife and children being in England, he would be unable to go there to see them. It was only by accumulating his three months' leave that the uncovenanted service officer was able to get to England at all. Also it gave him an average of three-fourths pay when he was at home. If only the children were sent to England and the wife remained in India, if he had to take a month every year it would be necessary for him to take his wife to the hills and stay at a hotel or furnish a house, and break up his establishment in the plains, and thus add largely to the expense of living in India.

75,308. Mr. THOMAS said there were certain subordinates who were always provided with free quarters. There were very few houses which could be rented.

Mr. JAMES thought the Government might build houses and charge rents based on a percentage of salary.

75,309. (*Mr. Styan.*) Mr. THOMAS said he did not remember expressing agreement with any portion of the Amalgamation scheme. He was consulted on the drawing up of the scheme on every point, but it did not follow that he agreed with what was ultimately decided. With reference to experimental amalgamation in Bombay, the duties of Traffic and Engineering which were formerly carried on by one set of officers have now been separated. With regard to officers on on tour by steamer, he proposed that in journeys by steamer the allowance should be the same as in journeys by rail both for transfers and for ordinary travelling.

The witnesses withdrew.

P. N. MITRA, Esq., Assistant Superintendent of Telegraphs, Lucknow Division.

Written Statement on behalf of the Provincial Service Officers of the Indian Telegraph Department.

75,310. (I.) **Method of recruitment.**—For reasons to be explained later on, the Provincial Service should be entirely abolished. It is suggested that the Superior Establishment of this Department should, in future, be recruited as follows:—

(1) One half of the Officers will be recruited in England. Three-quarters of these should enter by open competitive examination in which only qualified men from the different Engineering Colleges will be admitted. The rest will be recruited from the different British engineering firms and junior officers of the British Post Office by selection.

(2) The other half will be recruited in India. Of these three-quarters will be by open competitive Examination in which only qualified men from the different Indian Engineering Colleges will be admitted. The rest will be recruited from the subordinate staff of the Department by selection.

Candidates for the open Examination in both countries should be between 21 and 25 years of age. They should submit medical certificates of fitness. The standard of examination should be the same in England and India, as far as practicable; the subjects should be the different branches of Electrical Engineering, Theoretical and Practical, Mechanism, Mathematics applied to Electrical Engineering, Chemistry and Surveying.

75,311. (II.) **System of training and probation.**—The recruitment by competitive Examination will guarantee a preliminary training sufficient to meet the requirements of the profession in India. The selections from engineering firms and the British Post Office and from the subordinate service in India will have to be made very carefully so as to secure the same end, viz., the efficient performance of the duties required of a Telegraph Engineer in India.

The college training of the recruits of the Indian Colleges is at present supplemented by a period of training on probation for one year in the Department. Recruits obtained from England do not pass through this supplementary training. This probationary period in the Department is absolutely essential and should be insisted upon as an indispensable condition in case of all recruits and it should in addition be a probationary period in the strictest sense involving selection and the possibility of rejection at the end of it. Any plea that it is unfair or will deter candidates from England by reason of the attached risk may be met by the grant of free return passages to rejected probationers.

The period of probation should be limited to one year at the end of which the recruit's fitness for service should be considered.

The passing of the Signalling test should be made a condition for the first increment instead of the confirmation as at present.

75,312. (III.) **Conditions of service.**—The conditions of service should be the same for all officers whether recruited in England or in India. At present the conditions differ very considerably and this is the sole cause of the great discontent which prevails among officers recruited in India. Notwithstanding the fact that both classes of officers are recruited for and are required to do exactly the same work and bear the same responsibilities, the conditions of service for officers recruited in England are, in every respect, better than those for officers recruited in India.

75,313. (IV.) **Conditions of salary.**—The present pay of the officers recruited in India is approximately two-thirds of the pay of the officers recruited in England. This is utterly unfair and unsuitable. Under the present system the minimum pay of an Indian trained Superintendent is less than the maximum pay of an Imperial Assistant Superintendent and the minimum pay of an Indian trained Director is less that the maximum pay of an Imperial Superintendent. It therefore sometimes happens that an Indian trained officer has under him an Imperial officer drawing more pay than himself. A case in point is the present Director of Burma Circle (who is an Indian trained officer) drawing less pay than the Superintendent of the Rangoon Division who is working under him. This position is absolutely untenable.

The present scale of pay sanctioned for the Imperial Officers appears to be adequate. The pay granted to the Indian trained element is absolutely

inadequate and is not commensurate with their work and responsibilities. It is therefore desirable that the rate of pay should be the same for all.

In consideration of the fact that the officers recruited in England are put to extra expenditure on account of they themselves and their family going home on leave or returning to India on expiry of leave, it is suggested that a first class return passage to England be given to all officers recruited in England once in 5 years.

Local Allowances.—The local allowances at present sanctioned for Indian trained officers are two-thirds of those sanctioned for officers obtained from England. This difference is unjust, for these allowances are given for specific reasons, *i.e.*, as compensation for local disabilities which affect both classes of officers equally.

Probation period.—Not only have the Indian trained officers to undergo a probationary period and thereby incur the consequent risk of rejection, but even after completing such probation, the period is not counted for increments and promotion. This causes inequality between the two classes of officers. There should be no distinction whatever in the matter of emoluments of any nature between the two classes of officers. The emoluments should depend solely on services rendered and not on the country of original recruitment.

75,314. **(V.) Conditions of leave.**—Here again there is much disparity between the conditions prevailing as regards the two classes of officers. The leave rules should be the same for all classes of officers. The nature of the work performed being the same, an Indian trained Telegraph Engineer needs leave for his health quite as much as the officers from England.

The following modifications in the Leave rules are suggested:—

(1) Privilege leave may be allowed to accumulate to a maximum of 6 months.

(2) The minimum limit of 6 months for combined leave should be entirely abolished, no limit being fixed.

(3) Furlough up to a maximum of 2 years in the whole service may be allowed on full pay in lieu of 4 years ordinary furlough.

(4) The maximum furlough allowance admissible to officers on leave in India may be increased from Rs. 666 2/3 monthly to Rs. 12,000 yearly.

The leave rules that are now under the consideration of the Government of India are, in other respects, quite adequate; they should be made the same for both classes of officers.

In counting leave towards pensions, there should be no difference between periods spent in India and out of India vide C. S. R. Art. 408.

75,315. **(VI.) Conditions of pension.**—The Pension Rules should be the same for both classes of officers. It is a well and universally established principle that pensions are granted as a retiring provision for services rendered to the State and it is therefore illogical and unjust to create or maintain any distinction in this direction between persons who have in fact rendered exactly the same service. In other words pensions ought to be wholly and solely dependent on services rendered and not on the country of original recruitment, for this does not involve any special merit.

Some provision should be made for the families of officers dying in actual service. Though every officer joins the Provident Fund, the amount at his credit is not sufficient in the event of his death for the maintenance of his family or the proper education of his children, who are therefore left in a more or less destitute condition. It is therefore not unreasonable to ask that the amount of pension to which such an officer would have been entitled should be commuted for the benefit of his family.

The pension rules now in force require revision. Conditions of life have undergone many changes since the times these rules were framed. The cost of living has increased very much. The following scale of pension is suggested.

Years of Completed Service.	Scale or Fraction of Average Emoluments.	Maximum Limit.	
		£	Rs.
10	$\frac{20}{60}$ths	133⅓	2,000
11	$\frac{22}{60}$ths	146⅔	2,200
12	$\frac{24}{60}$ths	160	2,400
13	$\frac{26}{60}$ths	173⅓	2,600
14	$\frac{28}{60}$ths	186⅔	2,800
15	$\frac{30}{60}$ths	200	3.000
16	$\frac{23}{60}$ths	230	3,450
17	$\frac{26}{60}$ths	260	3,900
18	$\frac{29}{60}$ths	290	4,350
19	$\frac{32}{60}$ths	320	4,800
20		350	5,250
21		380	5,700
22		410	6,150
23		440	6,600
24		470	7,050
25	$\frac{30}{60}$ths	500	7,500
26		540	8,100
27		580	8,700
28		620	9,300
29		660	9,900
30		700	10,500

75,316. **(VII.) Such limitations as may exist in the employment of Non-Europeans and the working of the existing division of services into Imperial and Provincial.**—There should be no limitations whatever. Considerations of domicile, race, colour, or creed should have nothing to do with appointments. All should be allowed equal chances for competing in the examinations.

The division of the services into Imperial and Provincial is keenly felt by all Provincial officers of this Department. This distinction between officers who do exactly the same work and bear exactly the same responsibilities cannot be justified on any account and will result in splitting up the service into two hostile camps which will greatly injure efficiency. A deep and widespread feeling of suspicion and distrust will gradually spring up between the two classes of officers and this must wreck harmonious working. The Provincial service was the outcome of the Public Service Commission of 1886 and all Provincial service officers in this Department earnestly pray that the present Commission may be pleased to recommend the removal of this long and keenly felt grievance and restore the conditions of service to those that existed before.

75,317. **(IX.) Other points.** (1) *Analogy with other Provincial services.*—The case of the Provincial service officers of this Department is similar in every respect to that of the Provincial service officers of the Public Works Department and the Railways. The former have all been recruited from Roorkee and most of them would have got appointments in the Public Works Department if allowed to take them. Three of them beat the Public Work Department men of their years in the final examination and carried away most of the prizes, including some Civil Engineering subjects. The slight difference made in the conditions of service of the two Provincial services in the last reorganisation has caused a certain amount of disappointment. It is therefore hoped that Provincial service officers of this Department will receive the same treatment as Provincial service officers of the Public Works Department and the Railways. There is no analogy with other Provincial services. In other departments, Provincial service officers are not borne on the same list as Imperial officers, nor are they

entrusted with same class of duties and responsibilities.

(2) Great difficulty is experienced by the majority of officers in getting suitable house accommodation in most stations. It is suggested that the Government provide quarters for its officers more freely.

(3) The travelling allowances admissible on transfer under the present rules are universally recognised to be inadequate. More liberal allowances should be given to cover all reasonable charges incurred by an officer breaking up his home and having to move his family from one station to another. This may be limited to actual certified charges not exceeding 4 First Class Railway and Steamer fares, 2 Third class or Deck fares plus an allowance for 40 maunds of Luggage.

(4) Travelling allowances should be admissible to officers returning from long leave. In cases of officers on leave out of India, these should be calculated from the port of debarkation in India or the station from which leave was taken whichever is less. In case of officers on leave in India these should be given from the place where orders are received or the station from which leave was taken whichever is less.

Mr. P. N. Mitra called and examined.

75,318. (*Lord Ronaldshay.*) The witness stated that he joined the Department as Assistant Superintendent apprentice from Rurki in November 1903, and was confirmed in 1905 as Assistant Superintendent and was now in charge of a Division. The written statement sent in represented in the main the views of the whole Service, and he had been elected by vote as a representative of the Service. No conference was held. He drafted the written statement, and circulated it to all officers and asked for opinions and suggestions, which were incorporated, and then the document was printed. There were a few suggestions sent in, but the draft was generally approved.

75,319. With regard to recruitment, three-fourths of the recruits should be by competitive examination, whether in England or India. The written statement was based on the present system in the department, and he did not know anything about the new Amalgamation scheme. The recruitment was three and four every alternate year in England, and two and one in India. If the examination was held in England and in India, both Englishmen and Indians should be eligible to compete in either examination, and as far *as possible the examinations should be* of an equal *standard. He thought it would be* quite possible at *the present time* to carry out an examination in India which would be of the same standard as an examination in England. The curriculum of the Engineering Colleges in India was more or less the same as that of the Colleges in England. At present recruits from India were obliged to undergo a period of probation, whereas those recruited in England had not to do so. That was probably owing to the fact that when the system was introduced the curriculum in India was probably not so high, but it was very much higher now, and good progress had been made in teaching electrical engineering. At present it was necessary for both Indian and English recruits to undergo a period of probation in studying the technicalities of the department, but the period of training of the English recruits was not termed probation and counted for promotion in the service. His suggestion was that one-fourth of the recruits in India should be promoted from the upper subordinate service, the men being selected according to merit and not according to seniority. He did not think it would matter at what age they were selected if they could work properly. A man who had passed nearly the whole of his service in the subordinate grades, if a capable and energetic man, would be quite fit for promotion towards the end of his service. He was also in favour of comparatively young men being promoted, if sufficiently brilliant, and he did not think that would cause any discontent in the ranks of the subordinate service.

75,320. With regard to pay, he suggested it should be exactly the same for the Imperial and the Provincial Services, and that the Provincial Service should be abolished. He was not prepared to say it was necessary to recruit a certain number of Europeans for the Service, but there might be circumstances which would justify it. His own opinion was that a certain number of Europeans was desirable. Recognising that a European officer had certain expenses in the way of sending home his children to be educated, and had probably to have an establishment in England as well as in India, and pay large sums in passage money in going to and fro, a concession had been allowed in the written statement of a first-class return passage once every five years, and he thought that was sufficient to make up for the additional expenditure the Englishman had to incur. The Indian officer had also to train his children, and his cost of living was sometimes more than that of a European.

75,321. On the subject of pensions, the witness considered that if an officer died during the period of his service his family should be entitled to some consideration. The provision made by the General Provident Fund was not sufficient. The system of pensions was drawn up, no doubt, on an actuarial basis, and if the scheme put forward in the written statement was put into operation the actuarial calculations might be upset, and greater expense would be thrown upon the Government, but he thought that expense ought to be incurred. In connection with travelling allowances, the Service asked that a more liberal scale should be granted, and that the officers should not be put to expense when transferred from one place to another. He himself, for instance, had been transferred from Lucknow to Burma, where he remained for about nine months, and was then transferred back, and he estimated that he lost about 800 odd rupees. His pay was Rs. 535.

75,322. (*Sir Murray Hammick.*) The witness said he had taken a diploma from the Thomason College in Engineering. The age at which a diploma in Engineering was taken in Rurki was about 21 or 22. He had not been to England. His proposal was that the men should pass their examination in England and come out to India and go through a period of probation with the Indians who entered from the Engineering Colleges in India. He did not think any practical training in England was necessary. A man who had taken an Electrical Engineering degree in a University was quite able to enter the department and do the work at once. He was not aware that it was necessary for a boy who wished to have an electrical engineering career in England to spend at least three years in big works after leaving the University, and pay a heavy fee, in order that he might commence at the bottom of a department in some electrical company. Most of the officers were graduates in science of the different Universities, and obtained a three-years' training in an Engineering College, and he thought that was quite enough to make them of value to the Telegraph department in India.

75,323. (*Mr. Chaubal.*) The witness considered that officers should obtain study leave to keep themselves up-to-date, and if they did not do so their increments should not be given. If facilities were given, men could go to England and visit large works there. He himself was a B.A. of the Calcutta University with Honours in Science, and he had some knowledge of the subjects which were taught in the Engineering Colleges for the Public Works Department. The B.A. Degree and the Engineering Course at Thomason

College he believed was sufficient to enable him to carry on his work when he was first employed in the department, and with that education and training he could have entered the Public Works Department. A class-fellow of his was in the Public Works Department at present.

75,324. (*Mr. Abdur Rahim.*) The witness said a certain amount of laboratory work was done at the Thomason College, but not much practical work in electrical engineering. The work was mostly theoretical with a small amount of practical, but was quite sufficient for the Telegraph Department.

75,325. (*Mr. Styan.*) The witness admitted that he himself asked to be sent back from Burma. He quoted his last transfer only to show the inadequacy of travelling allowances. During his ten years' service he had had about 18 transfers, and very few of these were at his own request. The views expressed with regard to Europeans in the Department were his own, but they had been approved by other officers. It was taken for granted that a certain number of Europeans was necessary, and that the question was not to be discussed. He thought everyone should be given some chance of keeping himself up-to-date, whether Provincial or Imperial, and study leave should be given to both branches. He believed it was a fact that there had only been one college that ever had a training class for telegraphic work, and that class was now closed, but it would reopen if it was found necessary. The College was told by the Department of Commerce and Industry that no more recruitment would be made from that class and the class was closed.

The witness withdrew.

At Calcutta, Monday, 19th January 1914.

PRESENT:

THE EARL OF RONALDSHAY, M.P. (*in the Chair*).

Sir MURRAY HAMMICK, K.C.S.I., C.I.E.
MAHADEV BHASKAR CHAUBAL, Esq., C.S.I.
ABDUR RAHIM, Esq.

And the following Assistant Commissioner:—

G. R. CLARKE, Esq., I.C.S., Deputy Director-General of the Post Office.

M. S. D. BUTLER, Esq., C.V.O., C.I.E. (*Joint Secretary*).

G. W. SCHÖNEMAN, Esq., Deputy Director-General of the Post Office.

Written Statement relating to the Post Office of India.

75,326. **(I) Methods of Recruitment.**—The present method of recruitment for the appointment of Superintendent is as follows:—

(1) By nomination from outside the Department for the appointment of Superintendent or Probationary Superintendent.

(2) By selection and promotion from the subordinate ranks of the Department.

The nominations from outside the Department are ordinarily confined to statutory "Natives of India" as defined in Article 37 of the Civil Service Regulations, but the Director-General has power to appoint non-domiciled Europeans to the extent of 10 per cent. of the total staff of Superintendents. The Indian candidates selected are usually graduates of a recognised University.

This system is satisfactory, and, having regard to the qualifications required of a Superintendent and the nature of his duties, it is preferable to selection by competition.

75,327. **(II) Training and Probation.**—Men who are nominated for the appointment of Superintendent from outside the Department are appointed after a short period of training, the duration of which depends on the occurrence of a vacancy to which they can be appointed permanently. Usually they are first taken on as Probationary Superintendents, of which there are one or two appointments attached to each Postal Circle.

All candidates who have been selected for the appointment of Superintendent, whether from outside the Department or from the subordinate ranks, are required to pass a departmental examination, after which they become eligible for appointment.

The arrangement is satisfactory, and I have no suggestions to make.

75,328. **(III) Conditions of Service.**—I have no remarks to offer under this head.

75,329. **(IV) Conditions of Salary.**—The following are the existing grades of pay of Superintendents of post offices:—

1st grade	- -	Rs. 500—20—600
2nd „	- -	Rs. 400—20—500
3rd „	- -	Rs. 300—20—400
4th „	- -	Rs. 250
5th „	- -	Rs. 200

In my opinion this grading is inadequate, and should be revised as follows:—

1st grade	- -	Rs. 500—20—700
2nd „	- -	Rs. 400—20—500
3rd „	- -	Rs. 300—20—400
4th „	- -	Rs. 200—20—300

The two lowest grades of Rs. 200 and Rs. 250 (fixed) tend to retard promotion, and it takes a Superintendent a long time to reach the pay of Rs. 300. Considering the position he is required to occupy and the nature of his duties, it should not take him more than five years to reach the pay of Rs. 300.

As regards the highest grade, a maximum pay of Rs. 700 will be suitable for the most senior Superintendents who are not considered fit for promotion to the higher appointments.

Probationary Superintendents are entertained usually on Rs. 80 or Rs. 100, except in Burma, where the Probationary Superintendent draws Rs. 150. In my opinion Rs. 80 is not a suitable pay for a Probationary Superintendent. I do not consider it a sufficient

argument that we can get men on that pay, because we could, no doubt, get men on even less pay, and possibly on no pay at all if the period of probation was not too long. We should give a Probationary Superintendent a sufficient allowance to enable him to maintain himself with some regard to the position for which he is a candidate. He has sometimes to wait two or three years before being appointed as a Superintendent, and has in the meantime to remain at the headquarters of the Postmaster-General, which is always a large and expensive town. I recommend that the minimum pay for a Probationary Superintendent be fixed at Rs. 100, and that there should be another grade of Rs. 125 to provide for those Probationary Superintendents who have been kept waiting unduly long for appointment as Superintendent.

75,330. **(V) Conditions of Leave.**—6. Under Article 314 (*a*) of the Civil Service Regulations, relating to "Long Leave—European services," the leave allowance for ordinary furlough is *half the average salary*, and the term "Average salary" is defined in Article 16 to mean "the average of the salary which an officer "has earned during so much of the three years "preceding the day on which he gives up office as he "has passed on duty or on privilege leave."

There does not appear to be sufficient justification for taking "average salary" into account, and the leave allowance for ordinary furlough should be half the salary drawn by the officer on the day preceding that on which he gives up office,—or at all events, half the salary earned by him during so much of *the year* preceding the day on which he gives up office as he has passed on duty or on privilege leave.

In the case of pensions, the calculations in Article 474 (*b*) of the Civil Service Regulations take into account "Average emoluments," which term is defined in Article 487 as meaning "the average calculated upon the last three years of service." It is presumed that the ground for taking the *average for the last three years* into account in this case is that an officer might otherwise retire as soon as he had received promotion, and Government might then have to pay pension at a higher rate during the rest of the officer's lifetime.

In the case of furlough allowance, however, the payment at the higher rate would be for a limited period, and, ordinarily, the officer would return to duty at the end of his leave. Under the existing rule, an officer who has not been able to afford to take furlough until he has earned an increase of pay, is obliged to serve another three years after earning the increase before he can afford to take the furlough necessary for him to recuperate his health.

Moreover, in the case of furlough allowance the present rule operates against *all* officers, irrespective of the amount of their salary, whereas, in the case of pension, it operates only against those whose "average emoluments" amount to *less* than the maximum pension admissible to officers of his class. For instance, the rule would operate against an officer who had been drawing a salary of Rs. 2,000 for two years and was proceeding on furlough, whereas, in the case of an officer who had earned his full pension of Rs. 5,000 a year, equal to Rs. 416⅔ a month, the rule would operate against him only if his average emoluments amounted to less than Rs. 833⅓.

75,331. **(VI) Conditions of Pension.**—The *maximum* amount of ordinary pensions admissible under Article 474 (*b*) of the Civil Service Regulations should be raised from Rs. 5,000 a year (or Rs. 416⅔ a month) to Rs. 6,000 a year (or Rs. 500 a month), and this should not affect the additional pension of Rs. 1,000 a year which is at present allowed to the officers referred to in Article 475. It is obvious that a scale of pensions which was fixed half a century (or more) ago is not adequate in the present day. It needs no argument to show that the purchasing power of the rupee has diminished greatly in the interval and that the necessaries of life cost very much more now than when the present scale of pensions was fixed.

The grant of an additional pension of Rs. 1,000 a year to the officers referred to in Article 475 of the Civil Service Regulations is subject to the provisions of Article 464. Clause (*b*) of Article 464 lays down that all officiating and temporary service counts towards the minimum of three years effective service required before the concession can be granted, but excepts periods during which an officer officiates for another absent *on privilege leave*. There may possibly be some technical justification for this exception, but it is hardly equitable that an officer who actually performs the duties of the appointment in several privilege leave vacancies should be debarred from counting that officiating service, which may easily amount to a year, merely on the ground that the officer for whom he officiated was absent on *privilege leave*.

In my opinion, the exception in Article 464 should be abolished.

I am also of opinion that all officers should be allowed to commute a portion of their pension not exceeding ¼th without medical examination, and without reference to the purpose for which it is wanted, provided that the commutation is applied for within one year of retirement. A medical examination is necessary only if Government were dealing with the matter on actuarial lines, but it should not be necessary to do this. An officer whose health has suffered on account of strenuous work on behalf of Government during a long series of years has quite as much necessity for paying off his debts or providing for his family as another officer whose constitution was more robust.

As regards the particular purpose for which commutation is wanted, there is, in practice, no effective check on the disposal of the money. The endeavour to apply a check is unnecessarily inquisitorial and leads to much correspondence that should be avoided.

75,332. **(VII) Limitations in Employment of Non-Europeans.**—There is no such limitation and it is not required.

75,333. **(VIII) Relations of the Service with the Indian Civil Service and other Services.**—In 1886–87 there were, besides the Director-Generalship, six appointments of Postmasters-General and the Public Services Commission of that year recommended that "not less than three" of these appointments "should "ordinarily be filled by promotion within the Depart- "ment."

This was generally understood in the Department to mean that not less than one-half the number of the highest appointments referred to above should be open to officers of the Department, but, in practice, it has been intepreted to mean that, no matter how many appointments of Postmasters-General there may be at a given time, the officers of the Department had no claim to more than three of them. For the last two or three years only, have as many as four officers of the Department held appointments of Postmasters-General although the total number of appointments (including the Director-Generalship) was 8 before 1906, 10 from 1906 to 1908, and 11 since 1908.

In my opinion, it should be laid down clearly that not less than one-half the number of the highest appointments should be filled by promotion of officers *of the Post Office* and that if the total number of appointments is an odd number, the officers of the Post Office should be given the benefit of the extra appointment. This should, as at present, be subject to the reservation that Departmental officers fit for promotion are available. This will necessitate an explanation being furnished to Government whenever the officers *of the Post Office* are not given a proper share of the higher appointments.

A clear rule on the subject is even more necessary now than hitherto, in view of the proposed amalgama-

tion of the Post Office and Telegraph Departments. If any of the higher appointments of the Post Office are given to officers of the Telegraph Department (a telegraph officer has actually been acting as Postmaster-General for over 1½ years), it should be at the expense of the civilians and not of the officers of the Postal branch.

75,334. **(IX) Other Points, within the Terms of Reference to the Royal Commission.**—There are no other points on which I have any remarks to offer.

Mr. G. W. SCHÖNEMAN called and examined.

75,335. (*Lord Ronaldshay.*) The witness had been 33 years in the postal service, and had served as superintendent and Deputy Director-General. He had also officiated as Postmaster-General. As Deputy Director-General, he was included in the 10 Postmasters-General. He was recruited as an inspector and went through the superintendent's grade.

75,336. There was no rule as to whether appointments to the higher posts should be made from the superintendent or the postmaster branch. The higher posts were filled from either side, but the superintendents obtained most of them. It was a matter of selection, and there was no restriction as to the number of postmasters who might be selected.

75,337. He was satisfied with the present system of recruitment and did not think it desirable to lay down any fixed proportion of Indians. The majority of superintendents at present were Indians. Superintendents were recruited partly direct and partly by promotion. The present proportion was about half and half. This was satisfactory.

75,338. Two years was not too much for a superintendent to be on probation before being given a permanent appointment, but there had been cases in which the period had been three years. The minimum pay for a probationary superintendent should be Rs. 100 with a rise to Rs. 125 for those who were kept waiting for more than two years. Recently the minimum pay had been raised from Rs. 80 to Rs. 100, which was so much to the good.

75,339. An All-India list for probationary superintendents was not necessary. The present system of provincial lists should be retained on the ground that an Indian served better in his own province, and was not always willing to leave it. Any inequalities could be regulated by the Director-General in making appointments.

75,340. There was no objection to laying down a higher educational qualification in the case of Indians, as the field from which they were drawn was much larger than the field of the domiciled community.

75,341. The justification for raising the present maximum of pay to Rs. 700 was that the number of superintendents had largely increased. There were 172 now, as compared with 120 at the time of the last Public Services Commission, while the number of higher appointments was about stationary. Some compensation was needed for the men who did not get the higher appointments. There was no difficulty in securing an adequate supply of superintendents at the present rates of pay, but, looking at the higher appointments which would have to be filled later on, a better class of recruit should be obtained. To achieve that there should be an increase in the superintendent's pay.

75,342. In theory a graded was better than a general incremental system of pay for superintendents, as those who received their increments regularly had not a great incentive to work. At present officers were promoted *ordinarily* from one grade to another by seniority, but grade promotion could be withheld if necessary. It was true that, under a graded system, it was possible that a deserving man might be prevented from receiving promotion owing to the accident of non-retirement or lack of casualties in the higher grades. This being so he was prepared to accept a general incremental system of pay provided that it contained a selection bar at a given point. This might be put at Rs. 500.

75,343. Of late years the pay of the postmasters had been improved very considerably, and at present they had nothing to complain of.

75,344. The cadre was not large enough to enable men always to obtain the leave to which they were entitled. Furlough allowances were also so low that men did not take what they ought to take, and the rules on the subject ought to be revised. There could be no objection to commutation of furlough if it was left optional, and many members of the service would welcome such a provision.

75,345. Every kind of officiating duty should count towards the additional pension of Rs. 1,000 a year allowed by Article 475 of the Civil Service Regulations, so long as the officer had been actually on duty for three years.

75,346. At present a medical certificate was required for commutation of pension, and probably the man who had worked hardest, and was in bad health, was the very man who could not obtain it. No medical certificate should be required, and there should be no inquisitorial enquiries as to the purpose to which the commutation was going to be put. Commutation should be allowed for not more than a quarter of the pension, as now, but the present restrictions should be removed.

75,347. It was optional with officers who were in the service when the General Provident Fund was started to subscribe to it or not. The provident fund on the existing lines would not be a substitute for commutation of pension.

75,348. (*Sir Murray Hammick.*) His main objection to the existing rules for commutation was that, if a man asked to commute a portion of his pension in order to secure provision for his widow, it would not be allowed by the Government. The establishment of a family pension fund would not obviate the necessity for commutation of pension, as there were many things for which a man might require money.

75,349. It was not necessary that opportunities be given to senior superintendents, or specially-selected men, to go to England to investigate postal arrangements. All that was necessary could be learned in India. Experience in England was more likely to be of benefit when a man had passed the grade of superintendent.

75,350. Superintendents did not take as much leave as officers in other services because they could not afford it. If paid as well as officers in other services, it might be possible to compel them to take furlough.

75,351. Ordinarily superintendents were promoted to be Deputy Postmasters-General. There might be one or two cases of postmasters being promoted to that line, but they usually went on to be Presidency Postmasters. The pay of the higher appointments in the postmaster's line was much the same as that of the Deputy Postmasters-General. There was no reason why men should not be selected from both lines to be Postmasters-General; but the training that a postmaster obtained in large post offices like Bombay or Calcutta was not sufficiently diversified to fit him for the work. The experience of superintendents made them better men for the post. The promotion of postmasters should be quite exceptional.

75,352. During the last 10 years the Anglo-Indians and domiciled Europeans, who had come into the department, were not as good a class as they were 20 years and more ago. In these days men could obtain appointments in private firms to a much larger extent than formerly, and also Indians were taken into the department in much larger numbers, and that had affected the recruitment of Anglo-Indians and domiciled Europeans. Also the educational facilities of the schools were not quite so good as they used to be. A definite set of appointments should not be put aside for the domiciled community in the Post Office. The matter should be left in the hands of the Director-General. There was no danger that the domiciled community would be lost sight of and that the department would cease to be manned in part from that class. The present 10 per cent. for non-domiciled Europeans was quite sufficient.

75,353. He did not think he had been very fortunate himself in the service as he obtained his present appointment only in August last at the age of nearly 52, after 33 years' service.

75,354. The superintendents were not absolutely discontented, but they felt they ought to receive better pay, the present pay, owing to the rise in prices, being insufficient.

75,355. (*Mr. Chaubal.*) At present there were 16 probationary superintendents. There was an Indian Assistant Director-General and an Indian Deputy Postmaster-General. On the 1st September 1912, there was no Indian in the higher posts. The fixing of 10 per cent. for non-domiciled Europeans was to meet the case of field service and of planting districts, where the planters preferred to have European superintendents. The superintendents had to meet the planters in connection with all postal arrangements. The planters had to arrange for post office accommodation, for example, and preferred to deal with a European superintendent. A proper understanding between them was essential.

75,356. Postmasters below Rs. 300 were not gazetted officers.

75,357. Men who came from the subordinate ranks to be superintendents might be inspectors or clerks who had passed the departmental examination. Postmasters below Rs. 300 also had the opportunity of passing the examination and of entering the superintendents' line. There should be no interchange between the two classes of work, as they were entirely different.

75,358. Nominations of men from outside the department were usually made by the Postmaster-General. No advertisement was issued, but a large number of applications came in from time to time and were entered in a register, which was consulted whenever an appointment had to be filled up. It was only once in about three years that it was necessary to select a man. Under the present system men could be obtained with all the qualifications necessary. There was no objection to advertising the posts, and if men possessed qualities suitable for the office, there could, of course, be no objection to their having higher educational qualifications than they frequently had at present.

75,359. The years taken by a subordinate to rise to superintendent's rank varied between seven and ten; but there was no reason why a really competent man, who had been three years in the service, should not go up for the departmental examination and become eligible for appointment as superintendent. He could not say off-hand how many years it took a man, at the present time, to rise from the lowest to the highest grade of superintendents.

75,360. His statement that it was not desirable to have one All-India list for superintendents and postmasters referred to probationary superintendents. There was at present an All-India register for promotion for superintendents.

75,361. Government officials looked upon pension as deferred pay; but he was not certain whether Government admitted that it was so. The fact remained, however, that men received a certain pension, and if they were entitled to it there was no reason why a portion of it should not be capitalised.

75,362. (*Mr. Abdur Rahim.*) The qualifications of a candidate for a superintendentship were education, physique, antecedent social status and power of controlling establishments. The minimum standard of education was matriculation or its equivalent. Men were usually graduates. If a graduate possessed the necessary qualifications for the post, there was no reason why he should not be selected. There was a rough idea of keeping up a proportion as between the various communities in making appointments of probationary superintendents; but otherwise Indians of all classes, Anglo-Indians and domiciled Europeans were all considered together. The matter was and should be left entirely in the Postmaster-General's hands. With the small number of such appointments it would be very difficult to lay down any fixed proportion for any community. If the Muhammadans or the Hindus complained, the Postmaster-General would consider the complaint. There was no fixed principle either in appointing postmasters, but as a matter of fact nearly all of them were Indians. The postmaster worked up from a subordinate appointment, and if an Anglo-Indian entered as a clerk he could work up in the same way. Postmasters usually began in the very lowest grades of postmasters, and were there practically clerks, and were interchangeable with clerks.

75,363. (*Mr. Clarke.*) The pay of the ordinary superintendent should rise to Rs. 700 a month, and the brilliant man should go beyond. The efficiency bar at Rs. 500 should not prevent the average man from rising to Rs. 700. He had no objection to a time-scale begining at Rs. 200 and going straight to Rs. 700, so long as there was a point at which the question of efficiency for a promotion to the higher grades was considered.

75,364. Certain Presidency Postmasters had been promoted to be Postmaster-General and there was nothing to prevent a good man in the postmasters' line becoming a Postmaster-General. The administrative work which a Presidency Postmaster had to do was as difficult as the work a Deputy Postmaster-General had to do, and a good postmaster, if fit for promotion, would ordinarily be selected for a Presidency Postmastership.

75,365. The list of applicants for the appointment of probationary superintendent in the department was a very large one, and more than was necessary. Probationary superintendents were selected in the province to which they belonged, and directly they became superintendents were put on to a general list for promotion.

75,366. A senior probationary assistant in charge of a division would, under his proposal to have a higher grade of Rs. 125, draw Rs. 165 (pay Rs. 125 *plus* acting allowance Rs. 40), but he would agree to their having the pay of the lowest grade of superintendent.

The witness withdrew.

R. W. HANSON, Esq., Officiating Assistant Director-General of the Post Office;
C. D. RAE, Esq., Deputy Postmaster, Calcutta; and
H. K. RAHA, Esq., Superintendent of Post Offices, Midnapur Division.

(These three witnesses were examined together upon the written statement put in by Messrs. McMinn, Sinclair, and Sri Ram—vide paragraphs 75,213–31.)

75,367. Mr. HANSON also wrote:—

I agree generally with the memorandum on behalf of the superintendents and gazetted postmasters of the Post Office, India, which was submitted to the Royal Commission, in June last, by Mr. M. P. C. Byrne, Deputy Postmaster-General, Bombay, subject to the following modifications:—

Methods of Recruitment.—It has been stated that domiciled European candidates selected for the post of superintendents should be ordinarily under-graduates.

As the European schools in India teach according to the European Schools' Code, domiciled European or Anglo-Indian candidates should be required to pass the highest examination under this Code.

Conditions of Salary.—The pay of superintendents should be fixed according to the time-scale, rising from Rs. 250 to Rs. 800, after 22 years' service, by annual increments of Rs. 25.

The pay of Deputy Postmasters-General and Postmasters-General should also be increased proportionately.

Conditions of Leave.—The request for 45 days' privilege leave after 10½ months' service is, in my opinion, not justified.

75,368. Mr. RAHA wrote:—

To secure the admission of the best available candidates into the service, it is desirable that the principal avenue of admission into the service should be an open competition. All superintendents should be appointed from probationary superihtendents and no one should be appointed direct. The probationary superintendents should be recruited as follows:—

80 per cent. by competitive examination in India open to selected natives of India who must ordinarily be graduates of an Indian university.

10 per cent. from departmental officials by promotion after passing a departmental test.

10 per cent. by nomination of the Director-General or the Postmaster-General.

In this connection it is submitted that there is at present no necessity for the recruitment of non-domiciled Europeans to the service.

Conditions of Service.—The service should be constituted as a Superior Postal Service with pay from Rs. 300 rising to Rs. 1,500 in the manner mentioned below. (The pay of the service at present is Rs. 200 to Rs. 1,400, leaving out of consideration the appointments of Postmasters-General and Deputy Directors-General.) Rs. 300 to Rs. 500 by annual increments of Rs. 30 in 20 years and three grades of Rs. 1,100, Rs. 1,300 and Rs. 1,500, the three highest grades comprising the appointments of Deputy Postmaster-General, Assistant Director-General, Inspector-General, R.M.S., and Presidency Postmaster. The cadre of this service should include the appointments of postmasters on salaries of Rs. 500 to Rs. 800. Post offices for which such high pay is justified will be in charge of superintendents, as the officers in charge of such offices are expected to possess higher administrative qualifications than are necessary for postmasters in harge of offices on lower pay.

The appointments in the three highest grades referred to above should be filled up from among superintendents according to seniority. No officer who has risen to the top and is still working with diligence and integrity should be passed over. In regard to the pay proposed for the service, besides what has already been stated in the memorandum of Mr. M. P. C. Byrne, I would respectfully point out that, on account of the rapidly-increasing work of the department, it is inevitable that before long there must be considerable devolution of authority from the Postmaster-General to Divisional Superintendents. It is, therefore, absolutely necessary that the pay and status of the service should be raised and that the conditions of the service should be sufficiently attractive.

Postmasters up to the grade of Rs. 400—20—500 should constitute a subordinate service analogous to the subordinate service in the Telegraph Department Such officers and their offices should always be under the control of a superintendent.

I consider that the pay of the Paymasters-General and Deputy Directors-General should be raised to Rs. 2,000—100—3,000. Half of these appointments, as stated in Mr. Byrne's memorandum, should be reserved as prizes for the postal service and half for members of the Indian Civil Service. Appointments to this rank of departmental officers should, of course, be always by selection, two appointments at least being listed for Indians. Members of the Indian Civil Service selected for the department should be officers of at least 10 years' standing and they should elect for the department once for all. They should undergo a period of training before joining service in this department.

Messrs. R. W. HANSON, C. D. RAE, and H. K. RAHA called and examined.

75,369. (*Lord Ronaldshay.*) Mr. HANSON was a second grade Superintendent of Post Offices and was at present officiating as Assistant Director-General. His permanent pay was Rs. 500 and his officiating allowance Rs. 160. The greater part of his service had been spent as Divisional Superintendent. He had worked up from a Deputy Postmastership. Mr. RAE was Deputy Postmaster of Calcutta in the first grade of postmasters and had held that appointment since 1909. Previous to that he was in the Government of India Secretariat and in the Director-General's office for about six or seven years. Mr. RAHA began as a probationary Superintendent in 1895 and had risen to be a first grade Superintendent of Post Offices with a pay of Rs. 540.

75,370. Mr. HANSON said the majority of the service accepted the present system of recruitment and Mr. RAE agreed with him. Mr. RAHA, however, preferred a system of competitive examination, as he believed it would secure a much better class of men than was now obtained. The prospects of the service were sufficiently good to attract the very best men. In order to be assured of obtaining the necessary qualities apart from educational qualifications, he would have competition amongst a certain number of selected men. That system would make an enormous difference in a few years in the personnel of the service.

75,371. Mr. HANSON said that at present probationary superintendents had to serve for not more than two years, and as they had to qualify for and pass a departmental examination, and some of them did not pass straight away, he thought the two years suggested in the written statement was a fair maximum. The period of probation should not be less than one year before a man was put in charge of a division. The representation made in the memorandum was practically carried out now. Mr. RAE and Mr. RAHA agreed.

75,372. Mr. HANSON said the number of vacancies for superintendents was not very large throughout India, and if 50 per cent. was given to men promoted from the lower grades, the 50 per cent. left for direct recruitments would give only a few vacancies. This would mean that probationary superintendents would

have to wait far longer than two years before they received an appointment. Everything depended on the number of vacancies that occurred. The position of postmasters in the higher grades had been greatly improved in recent years, and the bulk of the men had a better outlook than formerly, so that more men now elected for the postmasters' line.

75,373. Mr. HANSON then said that a general list for probationary superintendents was not a very important matter from the superintendents' point of view. He did not wish to press the point. Mr. RAE and Mr. RAHA concurred.

75,374. Mr. HANSON did not know why the distinction was drawn in the memorandum between the educational qualifications of Indians and members of the domiciled community. In his separate written statement he had made a suggestion that, as the European schools in India had a school code, domiciled European or Anglo-Indian candidates should be required to pass the highest examination under that code. He understood from the educational department that very few Anglo-Indian schools taught for the ordinary B.A. degree, and that there was no general desire on the part of Anglo-Indian scholars to go up for that examination. To insist on it for a member of the domiciled community would therefore tremendously handicap his chances, as very few took that degree. Mr. RAE agreed. Mr. RAHA, on the other hand, thought the same educational qualifications ought to apply and was not impressed by Mr. Hanson's reasons. He saw no reason why a domiciled European should not take a college after his school course.

75,375. Mr. HANSON was satisfied with the present age-limits for direct recruitment and asked for an increase in the daily travelling and transfer allowances and more tentage and house accommodation. With regard to travelling allowance, most departments had similar grievances. There were too many restrictions in the rules. When a man went on tour, he should be entitled to his daily allowances. At present, if a man travelled by sea and disembarked in the morning, he received no daily allowance for that day. The department thought it would be valuable to have a committee appointed to revise the Civil Service Regulations, and that such revision would not cause any great loss to Government. The officers who chiefly suffered were superintendents, who were given Rs. 4 a day. If they had to travel by road twenty miles or under, they had to pay their carting expenses, and that was common to all Government departments. The Superintendent of the Railway Mail Service was badly off because he had to travel by rail and have his food in the train or in refreshment rooms and Rs. 4 was quite insufficient. The midnight to midnight rule should also be abolished. If an officer showed that he halted for a certain number of hours, he should get the extra allowance to which he was entitled free of deductions. With regard to house and tentage allowances, the Director-General had provided tents in some divisions in a small percentage of cases and also houses. Other departments also suffered the same inconveniences. It was well known that, throughout the large towns in India, rents were going up and officers had to pay out of all proportion to their salaries. A senior man drawing Rs. 500 a month might be able to pay, but, when a junior man came to take his place, he could not pay the rent his predecessor paid, and the house was lost to the superintendent. Mr. RAHA concurred. Mr. RAE agreed generally, but said that postmasters had not the same grievances, as they received free houses.

75,376. Both Mr. HANSON and Mr. RAHA wished to have a time-scale rather than a graded system. MR. RAE said postmasters were paid in accordance with the responsibilities of the particular post office over which they presided and therefore a time-scale would not be feasible in that branch of the service.

75,377. Mr. HANSON said that, even if a time-scale were introduced, he would press for officers to be compulsorily retired at fifty-five. There were strong objections to Deputy Postmasters-General and Postmasters-General being given extension over the age of fifty-five.

75,378. The argument in the written statement about the scarcity of well-paid administrative posts was used to support the claim for an increase of pay for the superintendent. It was true that, with the growth of a department like the Post Office there were chances of the administrative posts being increased in the future. According to Messrs. HANSON and RAE, there had been a falling-off in individual recruits of late years, though some were above the average standard. Increased pay would undoubtedly attract a better class of non-Indians than was now obtained, especially if they knew they would rise on a time-scale with a pension sufficient to retire on. At present two-thirds of the men did not rise beyond the superintendent's grade, and received a pension of from Rs. 250 to Rs. 300 a month, and they knew that in other lines they could be sure of Rs. 800 as pay after twenty-five years' service. Mr. RAHA, however, thought that, if the system of recruitment was changed, it would be possible to obtain better men without increasing the pay, though an increase in pay was very necessary.

75,379. Mr. RAE said postmasters claimed special treatment in the matter of leave on the ground that they had to work on Sundays and holidays. The whole of the department was working, as letters had to be sorted and sent on to their destination, and in larger towns there was a modified delivery. In Calcutta, for instance, there were two deliveries of letters on Sundays. Even on gazetted holidays and Christmas Day, a proportion of the staff was at work. Men obtain relaxation on a holiday roster in turn, but the heads of the offices could take very few holidays, as they had to be present for a certain portion of the day when the mails were being received or were being distributed for delivery. Mr. HANSON and Mr. RAHA said there was no justification for superintendents asking for the same consideration.

75,380. Mr. HANSON said the officers asked for the option of a pension after a twenty-five years' service. It would take a man twenty-two years to rise to the full pay of a superintendent, and then he would have to draw that pay for three years before he got half the maximum, which would make it twenty-five years from the date of his appointment in the lowest grade of superintendent. If he had joined as a probationer, or had been in the lower ranks, he would have had to serve longer. Very few men now retire after twenty-five years' service as the pension was not sufficient.

75,381. Mr. HANSON also said that the General Provident Fund was compulsory for all new entrants, but he did not think it could be considered a substitution for permission to commute a portion of pension. Both Mr. RAE and Mr. RAHA agreed.

75,382. With regard to the Telegraph Department, Mr. HANSON said the posts of Director-General and Postmaster-General were the only two in which the Telegraph Department would compete with the Post Office. At present the department had five out of ten Postmaster-Generalships and it was hoped that the proportion would be continued. If the departments were given half the Postmaster-Generalships, they would have no objection to a telegraph officer's being occasionally given one also, provided it was taken from the Indian Civil Service. On the other hand, the whole department acknowledged that the recruitment of members of the Indian Civil Service into the department had been very beneficial.

75,383. Mr. RAE said he was in favour of interchangeability between superintendents and postmasters. The work did not differ much from, and in the higher grades became more and more like, that of a superintendent. The only difference was that the superintendent had a good deal of travelling to do. When the position of Presidency Postmaster was reached it would be found, as in the case of Calcutta, that he actually had two superintendents working under him. Mr. HANSON, on the other hand, said he was not in favour of interchangeability. A postmaster's life was a sedentary one, and it would be

difficult to find a postmaster who, after a number of years, was physically capable of taking up a superintendent's work, which entailed continuous travelling in all kinds of weather; and many postmasters would not care about it. He objected to its introduction in connection with the officers now in the service because many of the present postmasters had already failed as superintendents. A postmaster was paid according to the importance of the place he occupied, whereas a superintendent was remunerated on entirely different principles. Mr. RAHA agreed with Mr. Hanson.

75,384. (*Mr. Abdur Rahim.*) Mr. HANSON did not think the amalgamation scheme would hurt his service, if 50 per cent. of the Postmaster-Generalships were secured to it. As regards the officers of the Telegraph Department, they were no doubt very expert in their own profession; but a Superintendent of Telegraphs by the time he had attained the seniority which would make him a Postmaster-General, would generally have settled down into a groove; and would not be of so much benefit to the department as a younger man who was a member of the Indian Civil Service. A sound knowledge of law on both the Civil and Criminal sides was required in a Postmaster-General and also a good knowledge of banking.

75,385. Mr. HANSON said that, in asking for recruits of good social standing, they referred to men of good family, who had received a liberal education, and had had an all-round training in athletics, which characteristics generally produced the right stamp of officer. Amongst Indians there were some who had adopted the European standard of living, and they were far more acceptable to the department in many ways. He did not mean that men should necessarily have had an education in England. The men who adopted European methods were more respected by the subordinates than those who did not. Mr. RAE was in general agreement with these views. Mr. RAHA, however, said he had never known a Postmaster-General enquire into what style of living was adopted by a candidate, and he could not imagine that the method a man adopted in his dress had ever determined his selection.

75,386. Mr. RAHA then added that the competitive examination he advocated would be a purely academic one. For the work of a superintendent a fairly well-educated man was needed. Indians who are not graduates were not appointed at present, except in the case of a few men who had been taken from the department. A competitive examination would give the best men available and it should be an examination for the whole of India, confined to a certain number of candidates selected from the different centres. That would improve the efficiency of the department.

75,387. Mr. RAE explained that the fact of there being at the present moment no Indian postmaster above the Rs. 400 to Rs. 500 grade was purely accidental, because Indian postmasters had risen to the higher grades. An Indian officer had recently retired from the Postmastership of Delhi; a Madrasi gentleman was at Bangalore, while the Presidency Postmaster of Madras was another Madrasi gentleman.

75,388. Mr. HANSON said officers did not take a great deal of furlough, because they had not been able to afford it. If the pay was increased, it followed that the leave allowances would be increased, and men would take more furlough. More men probably took leave now than formerly, and two or three had gone to Europe to study post office methods at their own expense. That was not recognised as a particular advantage in the service, but it gave the officer a wider knowledge, and enabled him to acquire new ideas. There was no necessity to depute an officer specially to study European systems, but when an officer was on leave in Europe he might be considered to be on duty for a short period if he wished to acquire special knowledge. He himself had been to the Post Office in London, where there was a good deal to be learnt.

75,389. Mr. RAHA said there was a desire on the part of Indian members to go to Europe to study postal methods and some men would avail themselves of the opportunity, if given. The eight years' interval rule was very hard, as people could not take furlough in instalments. If, for example, a man had a month's privilege leave, he should be able to add a month's furlough and take two months' holiday.

75,390. (*Mr. Chaubal.*) Mr. RAE said the promotion of postmasters was mainly by seniority up to the highest grade. There was no general affirmation of the principle of selection.

75,391. Mr. RAHA said that gazetted postmasterships above Rs. 300 were mostly held by Europeans and Anglo-Indians. Promotion did not go by seniority from the Rs. 200–300 to the Rs. 300–400 grade. In practice, selection was made from Europeans and Anglo-Indians, and that accounted for the absence of Indians in the higher ranks. There was a feeling amongst Indians that the higher posts were entirely governed by patronage, and it was in order to obviate that feeling that he suggested competitive examination amongst candidates selected from educational institutions. If that were done, perhaps some of the better class of graduates who now went into the executive and judicial services would be attracted into the Postal Department, because the salaries were quite as high.

75,392. (*Sir Murray Hammick.*) Mr. RAHA said that many more Indians had got into the department during the last ten years than formerly, and it was probably because Anglo-Indians and Europeans had held a much larger proportion of the service in the past that there were so many of them now holding higher posts. But even among the men recruited in late years the proportion of Europeans and Anglo-Indians had been too high. The proportion had decreased because a large number of Indians had been appointed to the superintendents' grade of late years, but, looking at the number of appointments made in the last five years, it would be seen that Anglo-Indians and Europeans had been appointed quite out of proportion, so that the proportion which at one time was decreasing was now increasing again.

75,393. With regard to the guarantee fund, Mr. HANSON thought the whole of the interest ought really to be utilised for the benefit of the subordinate staff, and others who subscribed towards the fund. The head of the department *ex officio* should have control of the funds. A good method would be for the Director-General to decide at the beginning of each year how much money could be given, and then the amount should be apportioned out. Mr. RAE and Mr. RAHA thought it would be better to have an advisory committee to assist the Director-General.

75,394. (*Mr. Clarke.*) On its being pointed out to him that out of forty-three postmasters there were twenty-three Indians and twenty Europeans in the Rs. 200–Rs. 300 grade, Mr. RAHA admitted that the proportion in the postmasters' line was very much better than it used to be. As the service now stood, Indians had 60 per cent. of the total number of appointments. He pressed for a larger percentage; but would not make it definite, as he wished to have a competitive examination by which anyone could get in quite apart from nationality.

The witnesses withdrew.

At Calcutta, Tuesday, 20th January 1914.

PRESENT:

THE EARL OF RONALDSHAY, M.P. *(in the Chair).*

SIR MURRAY HAMMICK, K.C.S.I., C.I.E.
SIR THEODORE MORISON, K.C.I.E.
MAHADEV BHASKAR CHAUBAL, Esq., C.S.I.
ABDUR RAHIM, Esq.

and the following Assistant Commissioner:—

J. M. COODE, Esq., Director, Traffic Branch.

M. S. D. BUTLER, Esq., C.V.O., C.I.E. *(Joint Secretary).*

H. MAYSTON, Esq., Director of Telegraphs, Bengal; and

J. C. SHIELDS, Esq., Acting Electrical Engineer-in-Chief, Telegraph Department.

(These two witnesses were examined together upon the written statement put in by Messrs. Streatfeild-James and Thomas—vide paragraphs 75,269–78.)

75,395. (*Lord Ronaldshay.*) Mr. MAYSTON had acted as Director of Telegraphs since December 1912. He joined the service in 1890 as an Assistant Superintendent from Cooper's Hill, and had gone through the ordinary grades to his present position. Mr. SHIELDS had acted as Electrical Engineer-in-Chief since February last. He was appointed originally by the Secretary of State as a temporary Assistant Superintendent of Telegraphs, and had been through all the grades in the department up to his present position. Both witnesses were signatories to the corporate memorandum, and supported the proposals made therein.

75,396. Mr. MAYSTON knew little about the scheme of amalgamation, except that a separation between the engineering and the traffic branch was proposed. His reason for proposing that three-fourths of the engineering department should be recruited in England, and one-fourth in India was that his experience showed that the more men obtained from England the more efficient the service would be. At present it was not easy to get qualified telegraph engineers in India. If half the engineering branch was recruited in India, it would lead to deterioration in the *personnel*. The recruiting, however, would be very small when the two branches had been separated. Mr. SHIELDS took the same view, but, provided the men recruited in India were sent to England for training for two years, he had no objection to half being recruited in England and half in India.

75,397. Mr. MAYSTON said no doubt training in England would give better officers, but he would still maintain that three-fourths should be recruited in that country. No recruits had come into the department since Cooper's Hill was abolished except those from Rurki, and they were recruited in the same way as Public Works officers.

75,398. Mr. SHIELDS explained that the Public Works Department advertised for men in England, and there was a committee to select the most promising candidates. He proposed a similar method of recruitment, except that, after the men had been nominated by the committee, they should have a competitive examination amongst themselves.

75,399. Mr. SHIELDS then said that he believed that only a very few officers of the department had seen the official scheme for amalgamation, or had been consulted upon it, but he had seen its working to a small extent in Bombay, and it appeared to him that the idea was to place the traffic branch, which previously had been looked upon as a most important part of the work, very much more under subordinates, and under officers who had had no experience of telegraph work at all. Skilled and well trained officers were required for the traffic branch just as much as for the engineering branch.

75,400. Mr. SHIELDS also said that he thought that about six months' study leave every five years on two-thirds pay should be made compulsory. That would necessitate an increase in the cadre, which was too small at present. Mr. MAYSTON considered it would be a good thing to send men on study leave to England as much as possible, but it should be left to the Government of India to decide how often an officer could be spared. They should go once in every five or ten years. Mr. SHIELDS said there were no facilities for electrical study in India, as there were so many new inventions continually being brought to notice, especially in wireless telegraphy, study leave in Europe was very important.

75,401. Dealing with the question of salaries, Mr. MAYSTON said they were sufficient, except with regard to the head officer of the engineering and traffic branches. He also claimed that if there was a suitable man in the Telegraph Department, he should be regarded as eligible for the Director-Generalship. Mr. SHIELDS said that, under the new scheme, the position of the Engineer-in-Chief would not be anything like that of the old Director-General, who was head of the department under the Government, and responsible to Government. The post of Engineer-in-Chief would be quite a small one compared with that of the Director-General of Telegraphs, even if the pay was raised. One officer at present was a Postmaster-General, and he believed that under the amalgamation scheme it was proposed there should be two. His branch considered they should have more such appointments. These appointments would be regarded as prize billets in that that they would enable Telegraph Officers to qualify in the work of both departments, and thus strengthen their claim for the appointment of Director-General of Posts and Telegraphs. He understood that Telegraph officers holding the appointments of Postmaster General would draw their ordinary telegraph pay whether this was greater or less than that of Postmaster-General. Both Mr. MAYSTON and Mr. SHIELDS preferred a time-scale to a graded system of pay.

75,402. Neither Mr. MAYSTON nor Mr. SHIELDS saw any objection to the pay being the same for Indians and Europeans, provided that a foreign service allowance was given to the latter, and provided that this carried the same privileges as salary in all respects. MR. SHIELDS said the officers were afraid some accounts' officer might discover a flaw afterwards, and reduce the leave pay. Mr. MAYSTON said a foreign service allowance might be sanctioned if this would get over the drawbacks from which Provincial Service officers were said to suffer. Mr. SHIELDS, on the other hand, said he would rather see all officers receiving the same pay, if they had equal qualifications and training, which at present they had not. Perhaps, however, it was not possible to justify paying an indigenous officer the high salary it was necessary to pay a man to attract him from a foreign country. Both witnesses would not object to seeing the term "Provincial Service" abolished.

75,403. Mr. SHIELDS added that there was no friction in the department owing to the division into Imperial and Provincial services, but there was a certain amount of discontent amongst Provincial men. It caused, however, no impediment to the smooth working of the department.

75,404. With regard to the difficulty of obtaining leave, Mr. MAYSTON said it was due chiefly to the shortage of officers. Personally he had not suffered, except on one occasion when he applied for furlough and had to wait a year, which meant a loss of a month's privilege leave. Other officers, however, had suffered a

great deal. Mr. SHIELDS had never had any trouble himself, except that he had not been able to take leave owing to the insufficiency of the pay. He should like to see a system under which an officer would be entitled to commute his furlough. The recommendation of the Decentralisation Commission that an officer should have a sort of leave ledger, and be credited with all the privilege leave earned and be allowed to take it whenever he cared to do so, was a very sound one.

75,405. Mr. SHIELDS said that a pension at the end of twenty years' service was privilege which the officers had now, and would be sorry to give up, although it was rarely used. Men on twenty years' service would ordinarily be forty-one or forty-two years of age. It was very difficult to get pension on a medical certificate. Mr. MAYSTON said that after thirty years' service the pension should be 700*l.*, and should be on a non-contributory basis. Members of the Indian Civil Service drew as much in pension. It was true they contributed towards it, but their pension was 1,000*l.* a year.

75,406. Both witnesses agreed that if an increase in pension for 25 years' service and upwards was allowed, officers of their department would be prepared to give up the right to pension after twenty years' service.

75,407. Mr. MAYSTON said that it was compulsory to contribute to the General Provident Fund, but that did not altogether provide what was required, and therefore the officers desired to commute a portion of their pension in order to have a lump sum on retiring. Mr. SHIELDS said the amount received from the General Provident Fund was very small. The officers looked upon the pension as deferred pay to which they had a right. Several men in the service had died leaving nothing for their families. There should be no restrictions on commutation, which should be unconditional.

75,408. Mr. MAYSTON said that the difficulty in obtaining houses only really occurred in large presidency towns and headquarters of Local Governments. Mr. SHIELDS added that house rents in Calcutta were enormous. In the old days bachelors had a house allowance and a presidency allowance, but they now received nothing at all. No house could be obtained in Calcutta on a short lease. The same consideration applied to Bombay and Rangoon. He had spent about 50 per cent. of his service in Calcutta, but being under the old system he had a house allowance, though an inadequate one, when holding his ordinary appointment. In his present acting appointment he got no house or presidency allowance. Other officers, however, had suffered very badly. The present house allowance rules very unjust and officers were regarded it as a great hardship to have to serve in Calcutta.

75,409. Mr. SHIELDS said the State should bear the actual cost of moving an officer from one place to another.

75,410. (*Sir Theodore Morison.*) Mr. SHIELDS thought that Government should commute pensions on more favourable terms than an insurance office. Officers had some claims on the Secretary of State, whereas they had none on an insurance company. Looking at pension as deferred pay there was a claim to be more favourably treated by the Governmnt than by an insurance company, though he did not think more could be claimed than approximately the actuarial value.

75,411. Mr. MAYSTON said that, if Indians were recruited in England, no proportion should be fixed. There were at present in the department only three or four Indians trained at Cooper's Hill. An Indian trained in an engineering college in Great Britain was much above an Indian who had been trained in India Mr. SHIELDS agreed.

Mr. SHIELDS said the reason he was recruited separately was that in 1893 an experiment was made of recruiting two officers through the Secretary of State as temporary Assistant Superintendents under a contract for five years, and afterwards they were appointed to the permanent establishment.

75,412. (*Mr. Abdur Rahim.*) Asked whether in view of the fact that the proportion of recruitment in England and India was considered by the Telegraph Committee in 1906, and a resolution was passed by Government in 1910, giving effect to the recommendations, Mr. SHIELDS replied that he could not say anything had occurred since then which called for a reconsideration of the question. Officers did not know what was coming under the proposed amalgamation scheme.

75,413. Mr. MAYSTON said that when the Committee inquired into the matter the traffic and engineering were all one branch, but now the proposal to separate them had come forward, and the written memorandum had reference to telegraph engineers. There were no means of training telegraph engineers in India.

75,414. Mr. SHIELDS considered that training for telegraph work could be obtained just as easily in England by an Indian as by any other man. There was no restriction at all. If there was a difficulty it would stand in the way of recruitment of Indians under the proposals that had been put forward.

75,415. Mr. SHIELDS said no appointment was made direct to the upper subordinate establishment, all appointments being made from the signalling establishment. The men in the latter started as telegraphists, and were gradually promoted, and were given a training at Sibpur College, before being appointed Deputy Superintendents.

75,416. (*Mr. Chaubal.*) Mr. SHIELDS was of opinion that men trained in the Indian engineering colleges would benefit more by two years' training in England after they had served some time in the department. They should have a period of probation in India as at present, and that period would enable the superior officers to determine which men were fitted to go to England for training.

75,417. In the signalling establishment Mr. MAYSTON pointed out there were three different grades of Deputy Superintendents and in promotion seniority was taken into consideration, though if a man was not considered good enough he did not obtain promotion. In the higher grades they rose according to merit, seniority of course being considered.

75,418. He did not know why there was a preponderance of Anglo-Indians employed in the Telegraph Department, but the question of communal representation was in the hands of Government, and he was not aware upon what basis they proceeded. Out of 38 Superintendents there were seven Indians, who were either recruited from Cooper's Hill or from Rurki. If from Rurki, they joined the Provincial Service on probation.

75,419. He had had experience of the work of Indians trained at Rurki. He did not think the work of the traffic department could be taught in a college at all, but some of the technical knowledge required for the traffic department could be obtained in an Indian college.

75,420. (*Sir Murray Hammick.*) Mr. MAYSTON said that if Indians were as good as Europeans, they could be recruited in England, and the committee there would select from Europeans and Indians alike with due regard to the qualifications, certificates and degrees possessed by the men. If it were made obligatory that half the recruitment should be made in England from Indians, there would certainly be a great risk that inferior Indians would be sent when no better ones were available there. It would be better therefore, that Indians should be recruited in India by people who knew them, and then be given a thorough training in England.

75,421. Mr. SHIELDS preferred that it should be left entirely to the Secretary of State to send out the best men, whether Indians or Europeans, but if it was necessary to secure a fixed proportion of Indians they should be selected in India. It would be impossible to get 50 per cent. of suitable Indians in England.

75,422. Mr. SHIELDS considered that if the exile allowance was given to Europeans, it should also be given

to an Indian holding one of the upper appointments in the service, because those appointments were made by strict selection. That is to say, the pay for Superintending Engineers and officers of higher rank should be a fixed pay to be drawn by European or Indian alike.

75,423. If the Secretary of State agreed to commutation of pension, Mr. Shields said he would not object to a rule being made that Government should insist on every man in the service giving evidence that he had insured his wife against being left penniless, but for that purpose the pay of the officers should be increased. The officers would welcome a general Pension fund on the same lines as the Indian Civil Service for all the services outside the Civil Service, on a real acturial basis, to which all members should be obliged to contribute in order to provide for their widows and children but the pay would have to be raised to enable them to subscribe, as no one c ould save anything on the present rates of pay. The provident fund was quite insufficient for the purpose, and was being continually drawn upon for sickness, sending children to England, &c.

75,424. In the Upper Subordinate Branch of the Telegraph Service the promoted men came direct from the signalling establishment. The idea was to promote them by selection before they became too old.

75,425. (*Mr. Coode.*) Mr. Shields said he had seen the proposed amalgamation scheme confidentially, and a number of telegraph officers were consulted, but he did not know whether their recommendations were followed. The Department as a whole had had no opportunity of objecting to the separation. It seemed to him that the proposal to make over the control of traffic to the Postmasters-General was not likely to lead to increased efficiency, as these officers had no experience of telegraphic traffic. The pay of Rs. 2,750 for the Chief Telegraphic Officer was not a sufficient compensation for his loss of dignity. Only one telegraph officer had been tried as Postmaster-General so far, and he had been an unqualified success. If more officer were given a chance they would make good Postmasters-General.

75,426. It was considered to be a hardship that men with a temporary service of five years were not allowed to count that time in their seniority. In his own case, compared with the most junior Cooper's Hill man recruited in the same year, he had lost about Rs. 22,000 or 15 per cent of the total amount he had earned in pay since he came out, and he had been exceptionally fortunate in holding acting appointments.

75,427. (*Mr. Chaubal.*) When recruited as a temporary engineer no promise was made that after five years he would get permanent employment. But the Director-General of Telegraphs, when the incremental scheme was introduced, recommended that four out of the five years should be allowed to count towards incremental pay, quoting the case of certain temporary engineers who came out on short covenants with His Majesty's Secretary of State and were afterwards brought on to the permanent establishment of the Public Works Department and allowed to count their temporary service, less one year, in regulating their increments on the time scale of pay. The recommendation of the Director-General was disallowed by the Government of India. There had been, however, no breach of any promise made to him.

The witnesses withdrew.

G. P. Roy, Esq., M.I.E.E., Officiating Director of Telegraphs, Eastern Bengal and Assam Circle.

Written Statement relating to the Indian Telegraph Department.

75,428. The Imperial Service Officers of the Telegraph Department have already submitted a Joint Written Statement. The time allowed for the preparation of the Statement was too short. Further, they were not afforded sufficient facilities for a Conference for the consideration of the representation to the Royal Commission on Public Services in India. It is therefore considered necessary to submit a supplementary Statement.

75,429. **(I.) Method of Recruitment.**—In the corporate written statement reference has been made to the Proposed Amalgamation of the Department with the Post Office, and suggestion has been made only for the recruitment of the Engineering Branch of the Department, as the Amalgamation Scheme provides for the recruitment of Traffic Officers in India. No public pronouncement has been made of the details of the Amalgamation Scheme, but if it is finally decided to separate the Engineering from the Traffic, it is doubtful if this separation would lead to efficiency. The Traffic and the Engineering Branches of a Technical Department like the Indian Telegraphs, are so closely related, and inter-dependent on each other, that the separation of the two branches is undesirable. The Traffic Management is a profession demanding professional knowledge and scientific training, and Telegraph Engineering plays a very important part in the management of Traffic. Engineering Training cannot therefore be wholly divorced from the sphere of Traffic Management. It is therefore suggested that 75 per cent. of the Engineering and the Traffic Staff should be recruited from England, 12½ per cent. from qualified Subordinates, and 12½ per cent. from Indian Engineering Colleges. The qualifications and training of officers recruited from England, whether for the Engineering or for the Traffic Branch should be exactly the same, and specialisation of their duties should begin after they had gained some experience in the Department. All candidates should be nominated by the Secretary of State for India in Council, and after nomination they should pass a competitive examination. The establishment of a Central College for officers of all the Indian Services is considered very necessary, and it is suggested that all recruits for the Indian Telegraph Department should go through a course of practical training in the Central College referred to above.

75,430. **(II.) System of Training and Probation.**—The training of young officers is of vital importance to the Department, and the present system of training is not considered satisfactory. All first entrants should go through a regular course in Traffic, Technical and Engineering subjects. They should be attached to the Presidency Telegraph Offices, and should be made to undertake the duties of Operators, Supervisors and Technical Officers. On completion of this course, they should go through a higher practical training in electrical matters in the office of the Electrical Engineer-in-Chief, and then shonld be sent out on construction under competent officers. On completion of 12 months' training in the manner indicated above, they should be placed in charge of Sub-divisions, the re-introduction of which is a very important factor in the training of the Junior Officers, and in the efficient organisation of the Department. The abolition of the Sub-divisions has considerably handicapped the training of young officers. They have no longer the small units of charge to develop the habit of self-reliance, so indispensably necessary for their training. They are at present merely attached to the Divisional offices, with no very definite responsibilities or powers.

Young officers should be given an opportunity as far as far as possible of being trained in administrative work. There is at present no scope for such training. The number of Junior Officers attached to the Headquarters Office was three, but this number has recently been reduced to two by the replacement of a Telegraph Officer by a Secretariat Superintendent who has no practical Telegraph experience. The loss of this appointment is viewed by the Telegraph officers with some apprehension.

The maintenance of a very high standard of efficiency is absolutely necessary for an ever expanding Scientific Department like the Indian Telegraphs, and in order to accomplish this, every officer should be encouraged to keep himself thoroughly up to date in his professional subjects—General Engineering, Technical and Traffic, by liberal grant of study leave or leave on deputation with adequate allowance in Europe and America. The daily allowance at present granted during the period of study leave is 6*s.* a day, which is considered entirely inadequate to meet an officer's expenses. It is therefore suggested that it should be raised to 1*l.* a day, which is the ordinary daily subsistence allowance granted to officers of corresponding rank in England.

75,431. **(III.) Condition of Service.**—The conditions of the Service have been considerably altered. The Department was all along a part and parcel of the Engineering Establishment of the Public Works Department. In 1905, on the formation of the Department of Commerce and Industry, the Telegraph Department was separated from the Public Works Department and placed under the newly-created Department of Commerce and Industry. In 1908, a Traffic Officer of the British Telegraph Service was brought out to India to remodel the Traffic Branch of the Department, and in 1910 the Department was reorganised by the introduction of the Circle Scheme, and the abolition of Sub-divisions, which resulted in the decentralisation of the Upper half and the centralisation of the Lower half of the Service. In July, 1912, the experimental amalgamation was commenced. No other Department under the Government of India has gone through so many changes within so short a time as the Indian Telegraphs, and these continuous changes in the administration of the Department have caused a considerable amount of anxiety and apprehension amongst the officers of the Department. The Amalgamation Scheme under consideration of the Government of India is still in its confidential stage, and no definite pronouncement, either official or public, on the subject of prospects of the officers of the Department has been made. The officers are therefore not in a position to know how the amalgamation would affect their prospects, and they therefore make no further reference to the scheme under consideration. But they view the loss of the appointment of the Director-General of Telegraphs with great apprehension. The Imperial Officers were recruited and appointed to the Department on the direct understanding that they could aspire to the highest post in the Department. The loss of the appointment referred to above has caused loss of promotion in the lower grades affecting the pensions of some of the officers concerned. In paragraph 5 of the Resolution of the Government of India, Department of Commerce and Industry, No. 830–833, dated the 24th of January, 1913, an extract of which is reproduced,* the officers were distinctly given to understand that all possible protection would be afforded to the personal interests and prospects of the officers of the Department, and they view the non-fulfilment of the promise in the above Resolution with considerable disappointment. The officers of the Department therefore desire that further definite assurance may be given to them protecting their prospects and personal interests, both during the experimental stage of the Amalgamation Scheme, and after its introduction.

The Head of the Post Office has always been a member of the Indian Civil Service. The conditions of the new Service "Post and Telegraphs" will be considerably altered after the Amalgamation of the two Departments—one purely Non-technical and the other Scientific. In view of the sources from which the Telegraph Department draws the greater part of its members, the Telegraph Officers should be eligible, in future, for the appointment of the Director-General of the Amalgamated Department. Technical training and professional experience are indeed very important factors in the administration of a Scientific Service like the Indian Telegraph Department, which has to keep pace with the modern and progressive Telegraph Administrations in Europe and America. The Telegraph Officers by reason of their technical training and professional attainments must play a very important part in the future development and the Administration of the Combined Department. It is therefore suggested that every opportunity should be afforded to the Telegraph Officers to gain experience in the administration of the Post Office. They further desire a definite assurance that they should be eligible for the appointment of the Director-General.

75,432. **(IV.) Conditions of Salary.**—The Indian Telegraph Department is so peculiarly constituted that it cannot be compared with any other service in India. The Service is an Imperial one, and the establishment being limited, the officers are liable to frequent, and very long transfers, often at a very short notice. The frequency and the length of the transfers are very much greater than in any other service. The enhanced travelling allowance suggested in the Joint Memorandum will only defray the cost of transfers, but it does not make any provision for the loss entailed in breaking up homes and setting up new ones. The nature of the duties of the Telegraph Officers is such that in addition to an absence on tour from the Head Quarters of a minimum period of 150 days during the year, they are liable to be sent out on the line at a moment's notice, in all kinds of weather. This necessitates the maintenance of Camp Establishment all through the year involving additional expenditure which is not covered by the travelling allowances.

In 1910 the salaries of the officers were very much improved, but there is still room for further improvement in this direction, on account of the special circumstances referred to above. The increased cost of living both in England and in India, the depreciation in the purchasing power of a sovereign, and the increased cost of education for children, justify further increase in the scale of salaries sanctioned for the officers of the Telegraph Department. The pay of the Executive Branch of the Service should, in the opinion of the officers, be raised to Rs. 1,500 by annual increment of Rs. 75 instead of Rs. 50 after ninth year of service, and the commencing salary of the Administrative Grade should be raised from Rs. 1,500 to Rs. 1,750. The salaries of the higher Administrative Grades should also be proportionately increased. The present and the proposed salaries are shown in the statement below :—

	Present.	Proposed.
	Rs.	Rs.
1st year	380	
2nd year	420	
3rd year	460	
4th year	500	
5th year	540	Same as at present.
6th year	580	
7th year	620	
8th year	660	
9th year	700	
10th year	750	775
11th year	800	850
12th year	850	925
13th year	900	1,000
14th year	950	1,075
15th year	1,000	1,150
16th year	1,050	1,225
17th year	1,100	1,300
18th year	1,150	1,375
19th year	1,200	1,425
20th year	1,250	1,500

* "The Government of India earnestly desire that in such steps as may be taken towards the amalgamation of the two Services, all possible protection should be afforded to the personal interests and prospects of the existing staff of both Departments in all grades."

Administrative Grades.

Present.	Proposed.
1,500	1,750
1,750	2,000
2,000	2,250
2,250	2,500
3,000	3,000

75,433. **(V.) Conditions of Leave.**—The conditions of leave have been fully explained in the Joint Memorandum already submitted. The only additional point which requires consideration is the grant of furlough combined with privilege leave, the study leave for one month to junior officers of four years' service. Under the existing conditions no furlough is admissible until an officer has served eight years. This period of absence from England is considered too long to enable the junior officers to be sufficiently in touch with the latest Scientific developments of their profession.

75,434. **(VI.) Conditions of Pensions.**—No suggestion has been made in the Joint Memorandum for the increase of the Invalid Pensions which the officers desire should be provided for. They prefer the following scale of pensions to that put forward in the Joint Memorandum:—

Length of Service.	Scale of Pension. (Proportion of Average emoluments.)	Maximum per Annum.	With Medical Certificate or Voluntary.
Years.		£ s. d.	
10	$\frac{20}{60}$th	218 15 0	With Medical Certificate.
11	$\frac{21}{60}$th	240 12 6	,,
12	$\frac{22}{60}$th	262 10 0	,,
13	$\frac{23}{60}$th	284 7 6	,,
14	$\frac{24}{60}$th	306 5 0	,,
15	$\frac{25}{60}$th	328 2 6	,,
16	$\frac{26}{60}$th	350 0 0	,,
17	$\frac{27}{60}$th	371 17 6	,,
18	$\frac{28}{60}$th	393 15 0	,,
19	$\frac{29}{60}$th	415 12 6	,,
20		437 10 0	Voluntary.
21		459 7 6	,,
22		481 5 0	,,
23		503 2 6	,,
24		525 0 0	,,
25	$\frac{30}{60}$th	546 17 6	,,
26		568 15 0	,,
27		590 12 6	,,
28		612 10 0	,,
29		634 7 6	,,
30		656 5 0	,,

75,435. **(VII.) Such limitation as may exist in the employment of Non-Europeans and the working of the existing system of divisions of services into Imperial and Provincial.**—This has already been dealt with in the Joint Memorandum, but it is considered that a Provincial Officer may be promoted to the Imperial Service under the following conditions:—

(1) That he has less than 10 years' service.

(2) That he has an excellent record.

(3) That he gone through a course of professional training in England for not less than 12 months.

A suitable candidate for transfer from the Provincial to the Imperial Service should be selected by the Head of the Department and every facility should be afforded to him for his training in England.

75,436. **(VIII.) Relations of the Service with the Indian Civil Service and other Services.**—No further remarks are considered necessary.

75,437. **(IX.) Any other points within the terms of reference to the Royal Commission not covered by the preceding head.**—The following additional points deserve consideration under this head:—

(1) Medical attendance on the families of officers.

(2) The rate of interest paid on the deposit in the Provident Fund.

As regards medical attendance, it is considered that the fees to be charged by Government Medical Officers for attendance on the members of an officer's family should be fixed. The usual fee charged by a Medical Officer ranges from Rs. 10 to Rs. 16, which is considered out of all proportion to the officer's emoluments. The following scale is recommended:—

Officer's salary.	Medical fees per visit.
Rs.	Rs.
250 and under	2
251 to 500	3
501 to 750	4
751 to 1,000	5
1,001 to 1,250	6
1,251 to 1,500	7
1,501 to 1,750	8
1,751 to 2,000	9
2,001 to 2,250	10
2,251 to 2,500	11
2,501 to 3,000	15

It is considered that the Provident Fund which at present represents the only provision an officer can make for his family or to supplement his pension, should be materially improved by allowing a higher rate of interest The present rate of interest is only 4 per cent. which is considered too low for India where business enterprise seldom considers a rate of less than 8 per cent. sufficiently remunerative. The rate of interest may therefore be raised to 6 per cent.

Mr. G. P. Roy called and examined.

75,438. (*Lord Ronaldshay.*) The witness joined the Indian Telegraph Department in 1904 from the Royal Engineering College, Cooper's Hill, as an Assistant Superintendent. He was first attached to the telegraph workshops and the electricians' office, and then to a Central Telegraph Office for training in traffic. He was placed in charge of a subdivision and worked as a Subdivisional Officer for nearly nine years, and held charge of many important subdivisions in different parts of India. He was personally responsible for the maintenance of telegraphic communication, the disposal of traffic and the execution of constructional and re-constructional works. He was a Superintendent for nearly nine years and Traffic Manager for 10 months. In 1905, when in charge of the Arrakan Division, he laid two cables joining the main land with Ramree Island, the longest cables laid by the department without the assistance of a cable ship. In 1907 he went through a course of traffic training in the United Kingdom and on the Continent at his own expense. In 1908 he was selected for the post of Traffic Superintendent. In April 1910 he was placed in charge of the Central Telegraph Office of Madras. In 1911 he studied the traffic system in London, Edinburgh, Manchester, and Birmingham, and before returning to India submitted a report on the British telegraph traffic system with recommendations for the improvement of the service in India. In 1911 he was posted in charge of the Rangoon Division and carried out the work of reorganisation of the Telegraph Department there. In June 1912 he was transferred from Rangoon to Nagpur and appointed Traffic Manager of the Central Circle under the Postmaster-General. In May 1912 he acted as Officiating Director of the Madras Circle, and two months later was transferred to the post he now held.

75,439. He was one of the signatories of the corporate memorandum put in by the officers of the department, and had also put in a statement giving his own personal views. The corporate memorandum

had been framed on the replies to a circular sent round to all the officers. There had, however, been no proper opportunity to discuss this memorandum as it was drawn up and sent in a hurry.

75,440. The reference in his written statement to the non-fulfilment of the promise contained in the resolution of the Government of India of the 24th January 1912 was based on the fact that the department had lost the appointment of Director-General of Telegraphs, which they were given to understand from the beginning was one to which they could aspire. That amounted practically to a loss of 1,400*l.* a year. At the time the corporate memorandum was put in there had not been sufficient time to calculate the whole thing out. The additional posts in the higher grades did not afford any adequate compensation. The total number of Director's appointments under the amalgamation scheme was reduced from ten to five.

75,441. Three-fourths of the telegraph engineering staff should be recruited in England and one-fourth in India, instead of half and half, because there had not been sufficient development in electrical science in India, and it was necessary to protect the department against inefficiency. For some years to come it would be necessary to obtain 75 per cent. from England, but as electrical undertakings developed in India that percentage could be reduced. His opinion would not be modified if young engineering graduates were sent from India to England for two years' training.

75,442. His suggestion to promote, under certain conditions, a provincial officer to the Imperial Service, was only with regard to pay.

75,443. The higher pay given to the English recruited branch of the service was intended to compensate them, not only for serving in a foreign country, but for possessing higher qualifications.

75,444. He suggested that the Indian recruited in England should receive the same pay as an Englishman. At the same time, looking at the matter from the point of view of the Indian tax-payer, it was difficult to justify the payment of a foreign service allowance to Indians without European training working in their own country.

75,445. Recruitment should be by open competition from amongst nominated candidates. There should be a personal interview with the candidates, and when selection had been made an examination should be held. If the number of men who came up were not sufficient to fill the vacancies, they would probably have to be taken without a competitive examination.

75,446. Study leave should be given liberally, and should be spent in Europe or America. There were no facilities for acquiring high technical training in India. Men taking study leave should send in a report based on their study, and produce a certificate from the institution to which they had been attached.

75,447. The reason why the salaries asked for in his written statement were higher than in the original corporate memorandum which he had also signed, was because, when the latter was submitted, there had been no time to consider all the points. It might be true that a notification was published in the Gazette in February 1913, in which the officers of the Telegraph Department had been informed of the inquiry and of the points on which they would be questioned, but they had not taken action on this, or really considered their position until much later. This was also the reason why a larger demand for pensions was now being made as well.

75,448. After 20 years' service an officer's age should be about 42, and that was a fair age for a man to retire on a pension of 437*l.* The age-limit for retirement was 55, but an officer should certainly have the option of retiring after 20 years. At present the retiring pension was inadequate, as the cost of living both in India and in England had gone up considerably. It had been officially stated that the purchasing power of a sovereign was now only 16*s.* 3*d.*, and that affected the officer retiring to England, and the deterioration of the rupee affected the officer retiring to India. The hope held out in the Government of India's despatch No. 43, Public Works Department, dated 28th March 1870, had not been realised. In 1871 the Under Secretary of State for India, speaking on the subject of Cooper's Hill College, and the engineering service, claimed in the House of Commons that the Government had created a new profession on the level of the great Indian services, civil and military, and it was intimated that a grant of enhanced pension to the Imperial officers of the Telegraph Department was under contemplation.

75,449. The fees charged by Civil Surgeons for medical attendance on the families of officers were now too high. It would be cheaper to go to outside practitioners, but official etiquette required that the Civil Surgeon should be the only medical man consulted. The Government ought to be responsible not only for medicala ttendance on the officers but on their families as well.

75,450. (*Sir Murray Hammick.*) Personally he did not think the amalgamation was likely to increase the efficiency of the department, but the Government, of course, was not bound to consult the officers of the department. All that the officers desired was that the interests of the service should be well protected.

75,451. (*Mr. Chaubal.*) In India he had only had a preliminary education, and had then joined the University College School in England before going on to Cooper's Hill. He had seen none of the engineering colleges in India. His view that there was no sufficient development of electrical science in India to give the requisite training was based on his experience in practical work. An Englishman trained in England would turn out better work than an Indian trained in India, but Indians who had taken their education and training in England might be treated as Europeans. He had had experience of one gentleman, who had taken his education in British institutions outside Cooper's Hill, and he was an excellent officer.

75,452. Imported labour had always to be paid more than local labour in the ordinary business of life. He did not think there was much discontent in the service owing to the difference in pay, and he did not think it was likely to cause any discontent in the future.

75,453. Before sending in his personal statement, he had had discussions with several officers, and believed that his requests were regarded by many as reasonable.

75,454. (*Mr. Abdur Rahim.*) Efficiency was very important. It was also important that there should be colleges in India fitted to turn out men to discharge the work of the telegraph and other scientific departments. It was, therefore, necessary to encourage Indian colleges, and a beginning might be made by recruiting some appointments in India.

75,455. No doubt the Telegraph Committee took all the facts they had before them into consideration, but the Royal Commission could afford to take the responsibility of revising some of its recommendations.

75,456. That there were very few Indian Deputy Superintendents was explained by the fact that the service was not attractive to Indians. The number of Indian telegraphists was very small in proportion to the Anglo-Indian telegraphists. That was entirely due to the dislike on the part of Indians to the service, owing to the conditions being so severe. There were night duties, and officers had to go away at a moment's notice, and there was considerable hardship in the life.

75,457. There was a difficulty in securing Indians for the signalling establishment. There were two services, one local and one general, and an Indian recruited in Bengal would object to be transferred to Madras or Burma. There was a rule at present that a certain percentage of Indians should be in the signalling establishment, but he did not know what that percentage was. There was no such rule with regard to the upper subordinates. Sometimes great

difficulty was found in filling up the vacancies reserved for Indians.

75,458. It was the opinion of the majority of members of the service that the Telegraph Department would suffer from the proposed amalgamation. The Traffic Department also required engineering knowledge. In Europe the telegraph administration was divided into two branches, engineering and traffic, but the conditions prevailing in India prevented the European system of working being adopted in its entirety. In Europe the post office and telegraphs had been worked together from the beginning, whereas in India the two branches had grown up separately, and they were now two huge departments, quite different in character and constitution. In the British service the traffic officer, as a rule, rose from the rank of telegraphist, and went through several courses of technical training in electrical engineering, in polytechnics and similar institutions, and it was recognised that such a knowledge of engineering was indispensable for traffic officers. Facilities for such training were not available in India. In order to keep pace with the latest system of traffic management, it was necessary that a Traffic officer should be in touch with the latest European system of working.

75,459. Under the amalgamation scheme, the Telegraph Department would lose the appointment of Director-General of Telegraphs, and that disqualified officers from earning the higher pensions. The amalgamation also caused some loss of emoluments in connection with appointments of Postmaster-General. When the experimental amalgamation in Bombay was introduced, a telegraph officer was appointed as Postmaster-General on deputation, and when that officer proceeded on leave shortly it was understood he would be relieved by an officer of the Indian Civil Service. It did not appear clear why the appointment should not be given to a telegraph officer.

75,460. As an example of the hardship arising from frequent transfers, the witness mentioned that during his service of nineteen years he had had no less than 22 transfers. The total mileage travelled alone was 16,913, or an average of 890 miles a year transfer travelling. He did not consider his transfers were unusually frequent, though they might have been slightly above the average. An officer should be recouped the whole of his expenses of transfer, and some compensation should be given him for breaking up one home and setting up another.

75,461. (*Mr. Coode.*) The details of the amalgamation scheme had not been communicated to him officially, but he had had an opportunity of seeing them confidentially.

75,462. In the Telegraph Department there were only two officers who had had experience of European traffic management.

75,463. The amalgamation scheme would bring about a reduction in the strength of officers, which would affect the service. Such a reduction was a mistake, and would hamper the growth of the service. The present strength of officers recruited in England and in India was 84, whilst the sanctioned strength was 96. The deficiency was 12½ per cent. and was already felt. Any reduction in the engineering establishment would certainly not improve the efficiency of the service. With the development of the country the Telegraph Department was bound to extend. If the traffic increased, as it had done in the last three years, the department would be confronted with a serious problem; it would not be in a position to meet the requirements of the public, especially as temporary engineers were not avilable in India. There had been a considerable loss of efficiency in the department during the last few years owing to the abolition of subdivisions. The present unit of a charge was a division and was much too large.

75,464. During the first three months of the experimental amalgamation in the Central Circle he was called upon to report on the experiment, and reported favourably, but at the time of reporting he was not aware of the ultimate *modus operandi* of the traffic branch, which he was under the impression would be entrusted to engineers with traffic knowledge. In submitting the Administration Report he emphasised the fact that traffic management was a profession and required technical knowledge and engineering training. The results obtained by engineering officers in the management of traffic could hardly be regarded as an assurance of the future success of the management of traffic by non-technical officers.

The witness withdrew.

J. W. Thurley, Esq., Deputy Superintendent of Telegraphs (Traffic).

Written Statement relating to the Telegraph Department.

75,465. **(I.) Methods of Recruitment.**—Deputy Superintendents are recruited in three different ways, as there are three different classes of Deputy Superintendents, viz., Traffic, General, and Technical.

Deputy Superintendents, Traffic, are recruited from Telegraph Masters who have proved themselves thoroughly capable of dealing with Traffic matters. In this connection it is necessary to mention that before a Telegraphist is promoted to a Telegraph Master, the Telegraphist has to pass a Technical Examination and even then wait his turn for promotion, perhaps for years, while the Telegraphist who secures only a "pass" certificate (*i.e.*, obtaining 65 per cent. of marks) is liable to appear again for this Technical Examination before he is considered eligible for promotion if three years have elapsed between the date of his first examination and date of officiating as a Telegraph Master. It requires a Telegraphist to have about 20 years' service before he is promoted to a Telegraph Master, and perhaps another ten years before promoted to a Deputy Superintendent.

Deputy Superintendents, General, are, however, recruited from Telegraphists between the ages of 25 and 30 years old who have held the appointments of Inspecting Telegraphists or Inspecting Telegraph Masters. A Telegraphist can become a Deputy Superintendent, General, before his 15th year of service.

Deputy Superintendents, Technical, are recruited from Technical Telegraph Masters who had been elected to work in the Technical Branch having gone through a course of instruction in the Electrician's office.

For the purposes of recruitment the subordinate staff is divided into three branches—General, Traffic and Technical. Within the first five years of service or a little later a small proportion of the Telegraphists establishment finds admission into the General and the Technical Branches and the bulk remains in the Traffic.

The number of appointments of higher rank in the Traffic Branch in proportion to the lower is surprisingly small, as will be seen from the statement below:—

——	Deputy Superintendents.	Telegraph Masters—Telegraphists.
	1st. 2nd. Total.	
General -	24 + 48 = 72	78 There is no line between a Telegraphist and a Telegraph Master in this branch.
Technical	3 + 3 = 6	34
Traffic -	24 + 32 = 56	260 + 2,500.

The result is as may be expected stagnation.

For promotion to the grade of Telegraph Masters the conditions vary considerably in the three branches.

In the Technical Branch there is no bar between a Telegraph Master and a Telegraphist, and the latter goes on drawing a Telegraph Master's pay in due course of his service as a mere matter of routine.

In the General Branch such promotions are made on the recommendation of the Director of a Circle.

From what has been said above it will be seen the three branches, Traffic, General and Technical, are separated and the men in each branch trained on separate lines. This is not at all considered satisfactory as experience has shown each branch is interdependent on the others. An officer should be so trained as to be capable of performing the duties of all these branches,

To meet this the following suggestions are put forward for consideration:—

(1) Careful selection of Telegraphists of and over ten years' service and showing special intelligence and abilities in the performance of their duties as Telegraphists should be made and these Telegraphists put through a thorough examination in ordinary Traffic and Technical matters.

(2) Those securing 75 per cent. and over of marks should then be put through a course of a year's higher training in the Electrician's yard where they should be again examined at the end of this course.

(3) Successful candidates securing 75 per cent. or more marks should be put through a year's Construction training, and examined at the end of this period in all matters relating to the Engineering branch.

(4) Those who secure 65 per cent. or over of marks should be put through a year's training in higher Traffic matters and attached to large offices.

It will be seen that men who successfully pass these tests during a period of three years have really become thoroughly trained officers capable of efficiently conducting work in any of the three branches. The best of these successful candidates should be promoted to *Deputy Superintendent, second grade, as vacancies occur.*

They may elect to work in the Traffic, General, or Technical branches, subject to transfer to any other branch than their choice as found necessary by the Department. As vacancies occur in the 1st grade the most suitable man or men should be selected on probation for one year during which period his or their work should be very closely watched. As selections will necessarily be made from different circles it is proposed to send six of the Senior Deputy Superintendents so selected to the Presidency Offices (two each to Bombay, Calcutta, and Madras Offices) if required in the Traffic Branch, or to a large Division if required for the Engineering work and their work closely scrutinised.

Selected Deputy Superintendents should work in other Offices or Divisions than those in which they may be working at time of selection. The best men of these six should be then promoted to Deputy Superintendent, I, to fill existing vacancies.

This procedure if given effect to will bring the best men to the top.

75,466. **(II.) Method of training and probation.**—The system of training Deputy Superintendents varies according to the Branch the recruit is required to join.

In the Traffic Branch the selected Telegraph Master is placed in one of the Presidency Offices to acquire a thorough knowledge in Traffic matters. He has to study the nature and volume of traffic dealt with by that office, the means of forming up auxiliary outlets in the event of trouble on the normal routes, the arrangement of staff to deal evenly with the flow of traffic, &c., throughout the day and, in short, how to manage rapid disposal of traffic to and from all directions so far as his office is concerned.

When favourably reported on, his name is registered as eligible for promotion to Deputy Superintendent, Traffic. On a vacancy occurring he is placed on a year's probation generally in a large office.

In the General Branch the selected Telegraphists of 10 to 12 years' service are first attached to Divisions where they are employed in inspecting Railway and Combined Offices and other routine in the Engineering Branch.

At the end of 12 months they are put through a Departmental Examination in Engineering matters and successful candidates enter the Sibpur College for a 4½ months' course in higher mathematics, surveying, etc. On passing this examination they are straightway promoted to Deputy Superintendent II, General.

Deputy Superintendent, Technical, have no special training beyond that already gone through as Telegraph Masters, Technical.

The above shows the three Branches have been separated and work on separate lines. The remarks on this point under recruitment apply here.

75,467. **(III.) Conditions of Service.**—These may be reviewed under the following heads:—

(*a*) Nature of Service,
(*b*) Promotions, and
(*c*) Transfers.

(*a*) *Nature of Service.*—The nature of service rendered varies according to the Branch the Deputy Superintendent belongs to.

Traffic and Technical Deputy Superintendents work in Traffic Offices, the former are responsible for efficient handling of all Traffic matters while the latter attend to condition of lines, batteries, and all electrical apparatus.

(*b*) *Promotions.*—Promotion amongst the Upper Subordinates is very slow owing to the small number of appointments open to this grade.

In Government Resolution No. 913—918–115, dated 2nd February 1910, Department of Commerce and Industry, paragraph 20, sanction was accorded to the promotion of Deputy Superintendents to the Superior Branch of the Service to the extent of ⅛ of the appointments in that branch, *i.e.*, ⅛ of 84. This arrangement, if given effect to, would result in the promotion of a subordinate once in every two years on the average. The excess then in Superior Service has long been absorbed, yet no subordinate has been promoted to the Superior Service. There is a shortage of officers in the Superior Service, and yet no Upper Subordinate has been promoted to fill the vacancies up to the extent sanctioned in the Government resolution quoted.

It cannot be said with any degree of justice that men in the present subordinate ranks are not fully qualified to fill these vacancies in the Superior Service, while non-compliance with the ruling of Government is keenly felt by the Upper Subordinates.

Looking at the sister Service, the Postal Branch, it will be seen men have risen to much higher positions than it is possible for Telegraph subordinates to attain.

While giving these men all honour for their zeal and abilities it cannot be said they are in any way superior in intelligence to all the members of the subordinate rank of the Telegraph Service.

The Telegraph Department has lost its attraction for smart young men in India as the initial salary and general prospects are decidedly poor for the higher degree of proficiency required of them.

(*c*) *Transfers.*—Frequent transfers of members of the staff cause considerable pecuniary loss and inconvenience; while it is recognised that transfers must necessarily occur, these should be reduced to a minimum by each Circle maintaining the maximum number of men with a liberal percentage of reserves and thus avoid frequent temporary transfers.

Travelling allowances as controlled by the Civil Service Regulations are altogether inadequate, especially where a man transferred has a large family.

Since an official is transferred for the convenience of the Department, it is only reasonable to ask that the man concerned suffers no great loss in travelling.

Deputy Superintendents should be given the same concession as officers of the Provincial Service when travelling on duty or transfer. It is obvious if he

has to maintain the dignity of his office and command that respect so essential to control, he must be placed on a higher footing than his subordinates in this respect. At present a Sub-Inspector of the Telegraph Department is given a second-class pass for travelling purposes, thereby bringing him on the same footing as a Deputy Superintendent of the Department. Again, a man transferred to a station under 200 miles from his original station is restricted to only a double second class fare irrespective of the number of members in his family, and luggage he is bound to take with him. It does not appear reasonable that when the distance is under 200 miles the officer should serve public interest at his own cost.

75,468. **(IV.) Conditions of Salary.**—It is not known whether the pay of the Upper Subordinates is to be increased on the amalgamation scheme coming into force, but it is generally felt that the initial and maximum pays of officers of this branch are inadequate in consideration of the arduous duties performed by them and the great responsibilities they bear.

House rent allowances granted by Government are altogether inadequate to enable any member to secure decent house accommodation anywhere. This question has never received the serious consideration it deserves, nor has the basis on which this allowance is given been sufficiently examined. In the Presidency Towns particularly house rent is steadily increasing every year.

Many men are paying three to four times the allowance granted them for house accommodation. It is not expected that Government will pay full house rent to members of this Department, but afford reasonable relief in this direction, say to Rs. 50 per mensem. Postmasters in Calcutta receive from Rs. 50 to Rs. 100 per mensem as Presidency and House Allowance.

Deputy Superintendents of the General Branch attached to the Presidency Offices (Bombay, Calcutta, Madras) receive house allowance, while others of the same branch elsewhere receive none. Deputy Superintendents of the Traffic and Technical Branches where not provided with free quarters also receive house allowances.

As the position of all Deputy Superintendents is identical this distinction constitutes a grievance and ought to be removed. All Deputy Superintendents should be given house allowance where free quarters are not available.

Presidency Allowance.—Under existing rules Deputy Superintendents in the Technical and General Branches of the Telegraph Department are entitled to grant of Presidency Allowance in Calcutta and Bombay, but it is denied to Deputy Superintendents of the Traffic Branch and no reason is given for such denial. Presidency allowance is a local allowance as defined in Civil Service Regulations, 32 (*a*) given in consideration of exceptional local circumstances, such as the unhealthiness or expensiveness of the locality or duty or the specially arduous nature of the work. It cannot be said that the pay of the Deputy Superintendents, Traffic, has been fixed with special reference to their residence in Presidency Towns, and as a matter of fact a Traffic Deputy Superintendent draws the same pay whether employed at any station in the cheapest Presidency of Madras or at any other muffasil station or at Calcutta and Bombay. The nature of duties Deputy Superintendents have to perform in Presidency Signal Offices is of a specially arduous nature, and it is only fair that when employed in such offices they should get the Presidency allowance whether on consideration of the expensiveness of the locality or of the specially arduous nature of their duties.

The pay of Deputy Superintendents in all the three branches is equal and as there is no headquarters station in the muffasil for a Technical Deputy Superintendent it can be said that their pay was fixed in reference to residence in a Presidency Town but they get the allowance and Deputy Superintendents of the Traffic Branch are denied it, which is scarcely reasonable.

75,469. **(V.) Conditions of Leave.**—The restriction in Civil Service Regulations, 260, requiring an interval of six months to elapse between two periods of absence on privilege leave should be removed.

Privilege leave is kept in reserve to be enjoyed during sickness, but as often as not it happens that an officer falls sick within six months of return from one period of privilege leave and has to be placed on half pay, or if he has exceeded half pay limit on quarter pay even though he had privilege leave due and such dues are thereby forfeited.

The restriction in Civil Service Regulation, 233 (IV.), which requires that when privilege leave is combined with leave of any kind the combined leave must be for not less than six months should also be removed.

It may happen that an officer requires leave for a short period over the amount of privilege leave due at the time to recoup his health. Say an officer has two months and 20 days' privilege leave at a certain time and he falls sick, he requires 3½ months to get cured. If he takes 3½ months leave the whole period is counted on half pay and the privilege leave due is forfeited. In some cases an officer takes six months' leave in such circumstances simply to get advantage of the combined leave. This is not fair to the Department either as it loses the services of the man for the period in excess of 3½ months. Privilege leave is dearly earned and its forfeiture under the above restriction is most unfortunate.

It is only fair to expect that special conditions of service as in the Telegraph Department should ensure special privileges in respect of conditions regarding grant of leave and it is observed that Government recognise this as the condition regarding six months intervals does not apply to officers of the State Railway Revenue Establishment nor to Gazetted Officers of the Opium Department, *vide* note to Civil Service Regulations, 260.

75,470. **(VI.) Conditions of pension.**—For reasons set forth above the time at present allowed to count as service in respect of periods spent on leave with allowances in Civil Service Regulations, 408, should be increased.

The present and proposed periods are shown below:—

If the total service of an officer is not less than	Period to Count.	
	Present.	Proposed.
15 years - - - -	1 year	1 year
20 do. - - - -	do.	do.
25 do. - - - -	do.	2 years
30 do. - - - -	2 years	do.

MR J. W. THURLEY called and examined.

75,471. (*Lord Ronaldshay.*) The witness was transferred from the general to the traffic branch in 1902, and held the position of Deputy Superintendent in the traffic branch since that date. He was an ordinary telegraphist for about eight years, and they entered the technical branch, and was selected for Sub-Assistant Superintendent before being transferred to the traffic department. Before becoming Deputy Superintendent he himself had had 12 years' service, but at present in the general department a man became a Deputy Superintendent after about 15 years' service, and in the traffic department about 30 years.

75,472. All Deputy Superintendents were recruited from the ranks, there being no direct recruitment of any kind. All the larger telegraph offices were in

charge of Deputy Superintendents, except the three Presidency offices, which were under Superintendents. So far as work and responsibility went, the Deputy Superintendent corresponded with the gazetted Postmaster in the Postal Service, but not in the matter of pay and status. The difference in the duties of a Deputy Superintendent and a Telegraph Master was one of degree. The Telegraph Master had a small section of an office to manage, while the Deputy Superintendent was in charge of the whole office.

75,473. It was necessary that a Deputy Superintendent of Traffic should rise up through the ranks in order to learn the work of the department. The direct recruitment of untrained men would be impossible. A long training in the lower ranks was required.

75,474. The present rates of pay of Deputy Superintendents ran from Rs. 250 to Rs. 500. When the traffic branch was introduced in 1902, traffic officers were paid Rs. 350, but in 1908 the new scale came in, and the pay was raised to Rs. 400 or Rs. 500 for all Deputy Superintendents. There were only 16 officers in the two branches receiving the higher pay. The present pay would not be considered adequate, even if *the specific grievances with regard to house and transfer allowances were removed. The responsibilities of a Deputy Superintendent were equal to those of gazetted Postmasters, but the pay was very small in comparison.* Deputy Superintendents should be given the opportunity of rising to the same level as gazetted Postmasters. The most that Deputy Superintendents could rise to was Rs. 500, whereas gazetted Postmasters could rise to Rs. 1,200.

75,475. On the traffic side there were several posts above the Deputy Superintendents' class. The Superintendent's pay went up to Rs. 800 or Rs. 1,000, but no Deputy Superintendent was promoted to a Superintendentship. If that bar was removed, and Superintendents were recruited largely by promotion from Deputy Superintendents, the claims of the latter officers would be met.

75,476. A telegraphist selected to become a Deputy Superintendent should be trained for three years in the three different branches so that he might become an all-round competent officer.

75,477. The general branch was responsible for the lines, and the technical branch for the electrical apparatus, whilst the traffic branch dealt with the disposal of messages.

75,478. On the question of leave, the main desire was for greater elasticity. If the restrictions now imposed were removed, the representations put forward with regard to leave would be met.

75,479. (*Sir Theodore Morison.*) The officers would not press for an increase of salary if a considerable number of Superintendentships were thrown open to Deputy Superintendents, as they would then have something to work for. The proper proportion would be one-fourth. Generally speaking, a man would reach a Superintendentship after 25 years' service, so that he would have 11 or 12 years in the superior service, and would thus have a chance of rising nearly to the top.

75,480. (*Mr. Chaubal.*) Assistant Superintendents were recruited from colleges in England or in India. There had been no promotion from the subordinate ranks to the Assistant Superintendent grade. In the same way the Superintendents came in through the colleges, and had never served in any of the subordinate ranks. The officers came in first as Assistant Superintendents in grades running from Rs. 250 to Rs. 800, and then were promoted to be Superintendents. At present the experience obtained by a Traffic Deputy Superintendent was not sufficient to enable him to discharge the duties of an Assistant Superintendent or Superintendent. A Deputy Superintendent of traffic would not know anything about engineering work, while an Assistant Superintendent might be called upon to do both. That was why qualifications were needed in all three branches.

75,481. (*Mr. Coode.*) There were nine Indians holding posts of Deputy Superintendents.

The witness withdrew.

R. G. WALKER, Esq., Deputy Superintendent of Telegraphs (General).

Written Statement relating to the Telegraph Department.

75,482. [NOTE.—The views embodied in this written statement have been formulated after consulting as many officers of the grade as it was possible to communicate with in the short time at my disposal. These views may, therefore, be taken as representing the general opinion of the entire body of Deputy Superintendents (General), *i.e., group* (i) *below.*]

75,483. With a view to prevent possible confusion of the different grades of Deputy Superintendents it seems necessary to explain here that there are three distinct groups of officers in the Telegraph Department bearing this designation, on the same scale of salaries, but on separate cadres for promotion, &c., as detailed below:—

(i) *Deputy Superintendents (General).*—These officers, whose duties are of an exacting character, are chiefly employed on arduous outdoor work as Assistants to Superintendents of Divisions. They are entrusted with the construction and maintenance of Telegraph and Telephone lines and cables, and the preparation of estimates and accounts for the same. They also exercise general technical supervision of Telephone Systems and of a large number of Telegraph Offices worked by Postal Agency. Seven officers of this group at present occupy the responsible positions of Assistants to Directors of Circles, four are attached to the Store Branch (two of these are in charge of the important Store Depots at Bombay and Madras) and one is on deputation to the Traffic Branch as Assistant Traffic Manager in the Central Circle.

(ii) *Deputy Superintendents (Traffic).*—These officers are almost exclusively employed in the larger telegraph offices on purely indoor traffic work, *i.e.*, all matters relating to the receipt and despatch of telegrams—including the supervision and control of the staff of Telegraph Masters and Telegraphists working under them. A few of these officers are attached as Assistants to administrative Traffic Officers.

(iii) *Deputy Superintendents (Technical).* — These officers are employed on purely technical duties such as the testing of telegraph lines and cables, the maintenance of telegraph and other apparata in the Presidency Offices and the fitting up of important telegraph and telephone systems and other electric installations.

Note.—Each of the above three groups is self-contained and transfers from one group to another are not permissible.

75,484. **(I.) Methods of Recruitment.**—As Deputy Superintendents (General) are now recruited and should continue to be recruited, from the Signalling Establishment, some remarks on the methods of recruitment of Telegraphists are called for.

All that is now required of a candidate for admission to a Telegraph Training Class is to qualify in writing from dictation and to furnish a school certificate up to such standard as the Head of the Circle may prescribe.

For ordinary signalling duties connected with the receipt, despatch and handling of telegrams, these preliminary qualifications may be considered as quite sufficient; but when it is borne in mind that officers of higher rank who might, before completing their career in the Department, be drafted into the Superior Service, are drawn from the ranks of Telegraphists, it

does not seem sufficient to be guided by these qualifications alone. The question of suitability as regards general deportment, moral tone and disciplinary training should also receive close consideration, as these are important factors in the development of responsible and trustworthy public servants.

While, therefore, not proposing any change in the present method of recruitment in regard to preliminary educational requirements, it is suggested that only lads who come from well-recognised Public Schools, and who give the impression by their general bearing that they would do credit to themselves and to the service, should be considered as eligible for subsequent promotion to Deputy Superintendents, for the reason that, while discharging their duties in that capacity, they will from time to time come in contact with Superior Officers of other services, both Civil and Military.

With this object in view Heads of Educational Institutions who present candidates for the Signalling Branch of the Department should be required to furnish information on these really important points, and Heads of Circles might be asked to interview all candidates and record their personal impressions of them, which opinion should subsequently appear in the Personal Rolls of Telegraphists; and only those who are considered of the right stamp should be ear-marked, so to speak, as eligible for advancement to the Deputy Superintendent grade.

What we certainly need as a prospective recruit for the Deputy Superintendent grade is a lad, be he Indian, Anglo-Indian or European, with an all-round mental, moral, physical, and disciplinary training approaching in some degree at least to the type of vigorous, manly, self-reliant middle class Public School boy at Home.

It is generally conceded that the difficulty in obtaining recruits of the right stamp is the low initial salary offered. It is, therefore, necessary to raise the commencing salary and to place increments for the first few years on a more liberal basis, in order that the Service may attract the sort of recruits we need for the higher posts. In most other Departments and on some of the more important Railways more lucrative openings to commence on are offered to those who are put through a special course of instruction, prior to appointment, and the better class of boys naturally turn to them.

It is, therefore, suggested that the initial salary of a Telegraphist be increased from Rs. 50 to Rs. 60, and that his first few increments be so arranged to make it possible for him to attain to a salary of Rs. 100 in five years, conditional, of course, on his passing what is now known as the "Technical Test."

All officers of the Deputy Superintendent grade are emphatically of opinion that recruitment for their grade should be made, as at present, from the Signalling Establishment. It is considered that direct recruitment from any source outside the Department would not be a sound policy, since, apart from other considerations, it would deprive promising Telegraphists of one of the avenues of advancement now open to them, causing a disastrous block in their ranks and creating a real hardship.

Suitable Telegraphists, with due regard to what has already been said, and with, say, from five to eight years' service as Telegraphists, who elect for the General Branch and have so far done well should before being detailed for a special course of theoretical and practical instruction, and with a view to weeding out possible detrimentals, be once again required to appear before the Head of the Circle. Further, for the sake of uniformity in selection, it is suggested that all candidates approved of by Heads of Circles should be required to appear before the Chief Engineer for final selection.

75,485. **(II.) Methods of training and probation.**—Some modifications are suggested in the present system. The theoretical course should precede the practical. The general opinion is that the present course at the Sibpur Engineering College is too short, and that it should be increased to nine months at least, and that it should comprise lessons in the practical use of all surveying instruments, including the theodolite. It is all suggested that some time should be spent in the Store Yard, in the Office of the Electrical-Engineer-in-Chief, and in a Presidency Telegraph Office for the purpose of acquiring useful knowledge of (1) the nomenclature of the various patterns of construction stores and tools, (2) technical matters, including cable testing, (3) testing telegraph lines, &c.

The course of instruction to extend over a period of two years, and to be arranged as under:—

(*a*) Course of instruction in the Sibpur Engineering College for nine months. To pass the examination at present prescribed at the end of that term.

(*b*) Course in the Store Yard, under the Superintendent of Stores, for three months.

(*c*) Course in the Office of the Electrical Engineer-in-Chief for three months.

(*d*) Course in one of the Presidency Telegraph Offices for three months.

(*e*) To be employed on a large work of a telegraph line construction or reconstruction, under a capable officer for six months.

Note.—Only under (*a*) would the services of those under training be lost to the Department. Under (*b*), (*c*), (*d*), and (*e*) they will really be doing useful work while undergoing practical instruction.

On completing their training, as above, to the satisfaction of the Officers under whom they are trained, they should be appointed Inspecting Telegraphists (it would, perhaps, be better to designate them "Telegraph Inspectors"), and posted to Telegraph Engineering Divisions for duty in that capacity. While so employed they should be given every facility for acquiring a comprehensive knowledge of the duties and responsibilities of Deputy Superintendents (General) and of Divisional Office work and routine, including Cash and Store accounts; also of the rules in the various chapters of the Telegraph Code as now prescribed.

At the end of two years they should be required to pass the prescribed Departmental Examination, and, on passing that examination, their names should be brought on to a list of qualified men for promotion to Deputy Superintendent (General). Promotions should be made from this list as vacancies occur, with due regard to age, so that no case would occur of a man, after going through the mill, becoming age-barred. No man should be promoted who has less than 10 years' service and whose age exceeds the limit now fixed.

Until they are promoted to Deputy Superintendents they will continue to do duty as Inspectors (or Inspecting Telegraphists) on the progressive salary of Telegraphists, plus the usual allowance.

The period spent in training and as Inspectors should be considered as a sufficient probation, and no further probation should be imposed on promotion to Deputy Superintendent.

75,486. **(III.) Condition of Service.**—(1) Deputy Superintendents (General) labour under several disabilities, the chief of which are enumerated below:—

(*a*) *Non-gazetted rank.*—The nature of the duties of these officers is such that they are brought in contact with Superior Officers of other Government Departments and of Railways, in their relations with whom they are placed at a great disadvantage by not being recognised as Gazetted Officers.

(*b*) *Travelling Allowance.*—The Maximum salary attainable by the Officers of this class having been fixed at Rs. 500, they are technically debarred from any claims to first-class travelling allowances. Even a Deputy Superintendent holding charge of a Division, entrusted with all the powers of a Superintendent (usually a senior officer of the Superior Establishment) and bearing all the responsibilities and performing all the duties appertaining to that office, cannot claim first-class travelling allowances because his total emoluments, including charge allowance, are subject to a maximum of Rs. 500. In no other department of Government does this condition of things exist. Further, a Deputy Superintendent in charge of a

Division may have an Assistant Superintendent working under his orders, in which case the extraordinary anomaly is created of the officer in charge of the Division drawing inferior travelling allowances to those drawn by an officer working under him.

(*c*) *House Accommodation and House Rent Allowances.*—Quarters are not provided for Deputy Superintendents (General) nor is any house rent allowance granted to them, except in the three Presidency Towns and in Rangoon. On the other hand their *confrères* in the Traffic Branch (Group (2) under the head "Preliminary") who are on the same scale of salaries as themselves, are either provided with free quarters (and furniture) or granted house rent allowance in lieu thereof. Having regard to the indisputable fact that Deputy Superintendents (General) are subject to very frequent and inconvenient transfers, often to places where they cannot find suitable accommodation except at very high rentals, ranging from 12 to 15 per cent. of their incomes, their position in this respect is a very real hardship.

(*d*) *Conveyance and other Allowances.*—In respect of these also the Deputy Superintendent of the Telegraph Department usually fares worse than Officers of corresponding rank in other Government Departments.

(2) But the greatest hardship of all is the total exclusion of this class of Officers from advancement to Superior Service. An examination of the list of Superior Officers will reveal the fact that it does not contain the name of even a single officer recruited from the Upper Subordinate grade, Government Resolutions on the subject notwithstanding. In practically every other Department of Government Service, and in the Post Office in particular, capable subordinates have been advanced to Superior Service.

(3) It is fervently hoped that these matters will receive very careful and sympathetic consideration and that measures will be adopted without delay for the removal of these disabilities. It is suggested that the fairest and most effective remedy for (*a*) and (*b*), and incidentally for (*c*) and (*d*), is to place Deputy Superintendents of the Telegraph Department on the same footing as Superintendents of Post Offices. It cannot be denied that there is just as good material amongst the subordinates of the former Department as there is in the latter, and that the qualifications, responsibilities and duties imposed on Deputy Superintendent (General) are, in every respect, equal to those required of Superintendents of Post Offices, a large number of whom have been recruited from the Subordinate ranks.

(4) In the Post Office such of the Subordinate staff who pass what is known as the Post Office Departmental Examination are borne on a list for promotion to Superintendents, and such promotion carries with it advancement to Gazetted rank, and a title to first class travelling allowances. In the Telegraph Department subordinates who aspire to the rank of Deputy Superintendent (General) after a careful selection, are put through a special course of instruction and training, at the end of which they have to pass a searching Departmental Examination and a stiff medical test of fitness, and yet on promotion they are only reckoned as "Upper Subordinates."

(5) This unmerited slur on the subordinate staff of a sister Department has been very keenly felt for many years past, and has been the subject of memorials from time to time. Prominent attention was drawn to this differential treatment in paras. 9 to 12 of a memorial submitted to H. E. the Viceroy, in January, 1909, by practically the entire body of Deputy Superintendents (General), and the rejection of their prayer in this respect was a bitter disappointment to these officers. Now that a scheme for the complete amalgamation of these two departments has gone up to the Secretary of State for India it is earnestly hoped that it includes a provision for the advancement of this long-suffering class of officers to Gazetted rank and to the title to first class travelling allowances. Of course, in order that they may be technically entitled to these benefits it will be necessary to raise the maximum salary of the grade.

75,487. **(IV.) Condition of Salary.**—(1) Existing conditions of salary, for the three groups of Deputy Superintendents are shown below in a tabulated form:—

Groups.	Total sanctioned Strength.	2nd Class.		1st Class.			
		Sanctioned No.	Scale of Salary.	Sanctioned No.	Scale of Salary.	Sanctioned No.	Scale of Salary.
			Rs.		Rs.		Rs.
General - -	72	48	250–15–325	16	325–15–400	8	400–25–500
Traffic - -	56	32	250–15–325	16	325–15–400	8	400–25–500
Technical -	6	3	250–15–325	2	325–15–400	1	400–25–500

The disregard of proportion when allotting the number in the higher scales for the General Branch, as compared with the number allotted for the Traffic Branch, caused some irritation to the men in the former Branch when the above scale was given effect to, and it is largely responsible for the serious block in promotion that now exists in that Branch. Particular attention is drawn to the fact that there will be, on 1st April next, 10 men in the 325–400 scale of the 1st class and as many as 26 men in the 2nd class who will be on the *maximum* pay of these scales, waiting promotion! A feeling of uneasiness prevails amongst those affected that it is hopeless for them to go beyond the maximum of those respective scales. It seems imperative that something should be done immediately to relieve this block, and that extensions beyond the age of 55 years, another cause of stagnation in promotion, should be effectually stopped, for some years at any rate.

(2) In paragraph 75,486(4), under the head "Conditions of service" it has been pointed out that the subordinates of the Telegraph Department have at least as fair a claim to advancement to the Superintendent Establishment as their colleagues in the Post Office, and if what is therein suggested is given effect to, and Deputy Superintendents of the Telegraph Department are brought on to the Superior Establishment, on an equal footing and on the same scale or emoluments as may be arranged for Superintendents of Post Offices, as a result of the recommendations of this Royal Commission; no other revision of theif salaries need be asked for. It is urged, with the utmost emphasis, that this well-merited consideration be now extended to Deputy Superintendents in return for useful services rendered under most trying conditions and in the face of adverse and discouraging circumstances.

(3) In paragraph 6 of their memorial of 1909 to H. E. the Viceroy, Deputy Superintendents prayed for a revision of salaries, with very sound arguments in support thereof, as shewn below:—

Class III - - - Rs. 250–25–350
Class II - - - Rs. 350–25–450
Class I - - - Rs. 450–25–600
plus eight special appointments on a salary of Rs. 700/–.

(4) If, for some very cogent reason, it is found impossible to entertain the proposal made in paragraph 75487(2), it is urged that a revision of their

salaries somewhat on the above lines should now be given effect to, that the maximum attainable be raised to Rs. 900 and that classes be abolished and a time scale be substituted, as shown below:—

Upper Subordinate Service.

Deputy Superintendents, (General).	First five years	Rs. 250–20–350.
	Next six years	Rs. 350–25–500.

*Superior Service *(by selection).*

Superintendents special grade.	First five years	Rs. 500–40–700.
	Last four years	Rs. 700–50–900.

(5) The above scale would give a man entering the grade of Deputy Superintendent, at about 30 years of age, a tolerable chance of reaching the maximum attainable in time to enable him to retire on full pension.

(6) In considering the above revision due regard has been paid to the prospects of subordinates in other Departments and on State Railways. Even some Company worked Railways are now throwing open their superior Services to their subordinates: therefore, in submitting this scale of revised salaries, Deputy Superintendents (General) are only asking for equitable treatment.

(7) One important point to be borne in mind is that the purchasing value of the rupee is now only about half of what it was 20 or 25 years ago, and that a present day income of Rs. 900 is about equal to an income of Rs. 400 or 500 of a quarter of a century ago; and, moreover, that revisions now made will probably remain stationary for the next two decades, when conditions of life, from a monetary point of view, will probably be still more difficult.

75,488. **(V.) Conditions of leave.**—*Privilege Leave.*—The present limitation of three months up to which privilege can be accumulated operates harshly, especially in view of the fact that privilege leave cannot always be granted at the time it is applied for. It is considered that such leave should accumulate up to six months.

Combined Leave.—Leave of this nature cannot now be taken for a shorter period than six months. This is another rule that operates harshly, for the season that, if a man goes on any period of privilege leave and has the misfortune to fall ill at the end of it, rendering a short extension of his leave necessary, the whole period of his leave is commuted to leave on half pay, and he thereby loses the benefits of the privilege leave he had earned. It is considered that combined leave should be allowed for any period.

Study Leave.—Leave of this kind is not granted to the subordinate grades. There seems to be no reason why such leave should be withheld from them. As study leave makes for efficiency it should be granted to all ranks under the same conditions as it is now granted to Superior Officers.

It is notorious that in the Telegraph Department privilege leave is frequently refused, and, owing to the limitations put upon it, leave earned is often entirely lost. It is, of course, admitted that the exigencies of the service may render such refusal of leave unavoidable, but in those cases where privilege leave is thereby forfeited altogether, some pecuniary compensation might be made in the shape of a month's or half a month's pay for every month of privilege leave thus lost.

Furlough.—It is recognised that officers recruited from England are entitled to some special indulgence in the way of more liberal furlough rules. Their homes are a long way off and they lose a considerable portion of their furlough in the voyage to and from England. The rigours of the Indian climate must also tell on them more severely than on persons born and brought up in the country. While, however, conceding all this ungrudgingly, it is considered that the disparity in the rules is too great, especially in their application to the subordinate grades. It is, therefore, suggested that the furlough rules and conditions, in so far as they relate to the subordinate grades, should be placed on a more generous scale.

75,489. **(VI.) Conditions of pension.**—The existing regulations regarding pensions appear to be reasonable, except in respect of the condition that retirement previous to the completion of 30 years' service entails the production of a medical certificates of unfitness. The unanimous opinion of all officers is that the rules should be amended so as to provide for retirement on full pension after completion of 25 years' service without the production of a medical certificate.

It sometimes happens that a man dies before retirement, after rendering between 20 and 35 years' service. Under the present rules the pension earned is, of course, in the nature of the case, entirely lost, and the man's family do not get the benefit they would indirectly derive if the man had lived to enjoy his pension. In such cases the family, even though they may receive a lump sum of money from the recently instituted Provident Fund or from an Insurance Company, are soon reduced to penury. It is thought Government should take this matter into consideration and devise some measure whereby the widow of the deceased officer would become entitled to a reasonable fraction of the pension her husband would have drawn had he lived.

75,490. **(VII) Such limitations as may exist in the employment of Non-Europeans and the working of the existing division of services into Imperial and Provincial.**—It is not known what limitations have been fixed for the employment of non-Europeans in the Telegraph Department but in recent years they have been admitted in larger numbers. Nor is it known if any restrictions on account of nationality are placed on candidates recruited in England for the Imperial Service. Apparently there are none.

As regards the Provincial Branch of the Superior Service, which, as it now stands, has been entirely recruited from the Rurki College, it may be pointed out that, of the 19 officers in that service only three are Europeans or Anglo-Indians and 16 are Indians. This is a ratio enormously in favour of the latter.

In the Subordinate Establishment there is no limitation apparently, and it is generally thought that the existing ratio is satisfactory.

As the controversy with regard to this question appears to be chiefly directed to appointments in the Superior Services further remarks under this head would be out of place and superfluous here.

The existing division of the service into Imperial and Provincial must necessarily cause much heart-burning in the ranks of the latter, but a little consideration would show that there are very sound arguments in favour of officers recruited from England being granted higher emoluments and certain additional privileges. These officers are working in a country thousands of miles away from the land of their birth and they incur enormous expenditure in the up-keep of two establishments very often, in going Home and returning from leave and in the numerous incidental expenses connected therewith, which the Indian recruited officer is saved. It has been argued that for men doing the same work there should be no differentiation in pay, but this argument falls to the ground when it is pointed out that senior and junior officers of the same service, doing the same work, are not paid the same salaries. Would the junior officer be justified in claiming the same remuneration as is paid to his senior since he turns out work of the same nature? However, in order to quench this heart-burning the question of placing all officers on the same scale of pay and granting a personal allowance, equivalent to one-third of his income, to an officer recruited from England, which allowance should be included in his emoluments in calculating leave allowances and pension, is suggested. Of course, the remedy would not, it is feared, be effectual but it seems to be the only way of meeting the case.

* 25 per cent of superior appointments to be reserved for this class.

It is thought that for purposes of administration the Superior Establishment should contain at least 50 per cent. of officers recruited from England, and further, the system of direct recruitment from outside the Department for the Superior Establishment in this country should be abolished. This would do away with the Provincial Service as it is now composed. The other 50 per cent. of the Superior appointments should be allotted to capable men in the subordinate grades—25 per cent. to Deputy Superintendents (General) and 25 per cent. to Deputy Superintendents (Traffic and Technical). It is emphatically asserted that there is excellent material in the Department itself for such recruitment.

75,491. **(VIII) Relations of the service with the Indian Civil Service and other services.**—No remarks as regards the Indian Civil Service except that it is considered that it would be a wise policy to always have an Indian Civil Service Officer at the Head of the two Departments which will necessarily require the control of an exceptionally capable officer, specially experienced in administration.

In so far as the Suborbinate Service of the Department is concerned, it compares, as already pointed out, unfavourably with the Subordinate Services of other Departments, especially in the matter of advancement to the Superior grades. A comparison on this point is invited.

75,492. **(IX) Any other points.**—If possible something might be done to reduce the large number of transfers which are more numerous in the Telegraph Department than in any other Department.

Mr. R. G. WALKER called and examined.

75,493. (*Lord Ronaldshay.*) The witness had held the position of Deputy Superintendent in the general branch for nearly 16 years, and was recruited from the signalling establishment. He was a telegraphist for eight years, and a Telegraph Master for seven. He did not represent the service, although he had consulted a good many of his brother officers in the general branch. Deputy Superintendents were divided into general, traffic and technical, and he spoke mainly for the general.

75,494. Signallers with five to eight years' service should be selected for training and instruction with a view to promotion. The present rule was that signallers might be selected for appointments as inspecting telegraphists, provided they had not less than four-and-a-half years' service. The course of training and instruction covered two years in all, and should be followed by two years' service as a telegraph inspector in a telegraphic engineering division. It was usual for theory to come before practice, and he considered a training in Sibpur College would be much more useful to a man before he was put on outdoor work. There might be something to be said in favour of having the practical training before the theoretical, but there was a general agreement amongst the officers that the training at Sibpur should come first. After serving for two years as telegraph inspector, an officer should go up for a departmental examination, and on passing should be eligible for promotion to a Deputy Superintendentship. By the time he was ready for promotion to a Deputy Superintendentship he would have had about ten and-a-half years' service, which was about the same as under the present system, except that a man did not now get the full training suggested. A man now selected as inspecting telegraphist must not be over 28 years of age, and when his turn came for promotion his age must not exceed 35.

75,495. The duties in the general branch of the service were of a very varied character. A considerable amount of technical knowledge was required, and a certain amount of traffic knowledge. When the engineering became separated from the traffic branch, the general Deputy Superintendent would go on to the engineering branch, so that a knowledge of traffic would not then be required. There were difficulties in the way of recruiting directly to the Deputy Superintendentship of the general branch, because a Deputy Superintendent, apart from his technical knowledge, had also to understand signalling, as he might be sent out at any time to open up a telegraph line that was interrupted. It was necessary, therefore, that a Deputy Superintendent should pass through the ranks.

75,496. The cadre was divided into two classes, and the first class was divided into two grades; but there was no difference at all in the work, men were doing from the bottom to the top. Unless a man did badly he would go up in rotation, but he would stop at Rs. 325 until there was a vacancy. The increments were given annually. By the time a man had reached the Rs. 325 grade he would have between 16 and 20 years service under the present method of recruitment. A signaller was recruited between 16 and 20 or an average of 18, and a man would be about 35 when he reached the Rs. 325 grade. Promotion from the second to the first class, and also from the second to the first grade in the first class was by seniority.

75,497. In 1892 a Government resolution provided as an occasional measure that deserving subordinates might be promoted to the superior establishment, and by a resolution in 1910 the subordinates were promised one-eighth of the superior posts. None of them, however, had yet been received. The reason no doubt was that the amalgamation scheme had not yet come into operation, but that did not help the men whose promotion was blocked.

74,498. By the time a man reached the top grade of Deputy Superintendent he would be between 42 and 50 years of age. One of the top men now was 54. He himself was in the second grade of the first class.

75,499. The responsibilities and powers of a Superintendent were greater than those of a Deputy Superintendent, but the work was the same, and he would promote Deputy Superintendents to be Superintendents by seniority tempered by selection. He did not think there was any objection to interchangeability as between Deputy Superintendents in the three branches, except that there was only one man now in the traffic branch, who had done work as a general Deputy Superintendent, and that was the previous witness, Mr. THURLEY. He had been drafted into the traffic department when the new resolution was published. There would be difficulties in transferring men from the traffic to the general branch as the traffic man had not done any outside work, but the general man could be transferred to the traffic because he had had a training in traffic.

75,500. The division of the service into Imperial and Provincial caused a certain amount of heart-burning; and though there was an unanswerable case for paying the imported a higher pay than the indigenous officer, the discontent might be mitigated by giving the same pay and allowing the European officer a foreign allowance to bring his emoluments up to the present scale.

75,501. It was the general opinion in the service that the head of the amalgamated department should always be an Indian Civil Service officer on account of the administrative work that would have to be done. That was on the supposition that the telegraph officer was going to be compensated for the loss of the Director-Generalship in some other way.

75,502. More elasticity was wanted in connection with leave.

75,503. His objections to direct recruitment in India for the Provincial Service was based on the fact that it was only fair to the subordinate staff that they should have an opportunity of being recruited The Postal Department was recruited in the same way. Quite 50 per cent. of the officers in the higher departments were recruited from the subordinate ranks.

75,504. The new branch of engineering telegraphists would be a much more specialised branch of work than postal work, and it might be a good thing to encourage the Indian Engineering Colleges by giving them some share in the recruitment to that branch, provided, of course, that a fair percentage went to the Signalling establishment.

75,505. (*Sir Murray Hammick.*) He had been educated at the Lawrence Memorial School, Ootacamund. If the higher appointments were given by direct recruitment in India, boys of the domiciled community from such institutions would be shut out. Their education was confined to such schools and included a certain amount of technical education.

75,506. (*Mr. Chaubal.*) Under the amalgamation scheme the group of officers now doing traffic work would go the traffic branch, and those in the general branch to engineering. The technical group would possibly go with engineering, though personally he thought it ought to go with traffic, because the work was largely inside telegraph offices.

75,507. The loss of the Director-General's post appealed to the Deputy Superintendents not from a monetary point of view, but from the point of view of loss of prestige to the whole service. Every officer recruited as an Assistant Superintendent or Superintendent could not possibly rise to the post of Director-General, but had hopes of doing so.

The witness withdrew.

At Madras, Tuesday, 27th January 1914.

PRESENT:

THE EARL OF RONALDSHAY, M.P. (*in the Chair*).

SIR THEODORE MORISON, K.C.I.E.
MAHADEV BHASKAR CHAUBAL, Esq., C.S.I.
ABDUR RAHIM, Esq.

And the following Assistant Commissioners:—

S. C. MAULIK, Esq., Superintendent of Telegraphs, Vizagapatam Division.
J. C. SHERIDAN, Esq., Postmaster-General, Madras.

M. S. D. BUTLER, Esq., C.V.O., C.I.E. (*Joint Secretary*).

H. C. A. GOODALL, Esq., Director of Telegraphs, Madras.

(*Mr. Goodall was examined upon the written statement put in by Messrs. Streatfeild-James and Thomas—vide paragraphs* 75,269–78.)

Mr. H. C. A. GOODALL called and examined.

75,508. (*Lord Ronaldshay.*) The witness was at present holding the post of director of telegraphs of the Madras circle. He was recruited from Cooper's Hill in October 1886, and attained his present position on the 10th April 1910. He was not a signatory to the corporate memorandum as he was on furlough at the time, but he accepted it as expressing his views.

75,509. He desired to lay special stress on the necessity for an education in England. To this end it was proposed that 75 per cent. of the service should be recruited in England. It was a matter not of colour or creed but of efficiency. If Indians would go to England for their training there was no objection to giving them 50 per cent. of the appointments, but he would prefer not to fix any racial proportions.

75,510. The request that recruitment to the engineering branch in England should be by competitive examination amongst nominated candidates had since been modified. The method now desired was that followed in the case of the Public Works Department, *plus* the requirement of an Engineering or Science degree to be held by the candidate.

75,511. He also attached importance to the grant of study leave to young engineering officers not less than once in five years, as in certain of the other departments. Without this he could not be expected to keep abreast of inventions and new discoveries. The electrical department of the engineering college in Madras was not organised to give a man the opportunity for advanced electrical studies.

75,512. The salaries proposed in the amalgamated scheme were generally suitable except with regard to the head of the engineering branch. If the pay of that post was raised to Rs. 3,000 it would meet the claims of the service with regard to pay, but not with regard to position. It would still be desired that an officer of the telegraph service should be eligible for the director-generalship of the combined department. It was true no officers were recruited with that promise, but they had always had the director-generalship of telegraphs before them.

75,513. He preferred a time-scale to a graded system. There was no objection to the pay of the provincial and Imperial services being the same, provided a foreign service allowance was granted to Europeans to bring their pay up to the present amount.

75,514. There was some feeling of dissatisfaction in the provincial service about the distinctions between the Imperial and provincial branches, and a solution would be to the advantage of the department. There was the same feeling amongst telegraphists in connection with the local and the general scale, under which they received different rates af pay while doing the same work, The general scale man, however, was liable to be transferred all over India, whereas the local scale officer was only liable to be transferred within certain limits,

75,515. At present there was not much difficulty in regard to leave, but no new officers were now being recruited, and unless the amalgamation scheme came in quickly officers would have to be taken on to relieve the strain.

75,516. The officers desired to retain their right to pension after twenty years' service. If a man desired to retire at forty-two years of age he should not be stopped, but very few would take advantage of the option. The fact, however, that it was there added to the attractiveness of the department.

75,517. The pension should extend up to 700*l* after thirty years' service and on a non-contributory basis. The figure was based on the pensions of a scientific department such as the Indian Medical Service.

75,518. The general provident fund was open to all officers of the service, and contributions were compulsory up to a certain percentage and voluntary over that. He believed every officer subscribed to the fund. The fund, however, could not take the place of

commutation of pension, though, if commutation was introduced, it might not be necessary to compel officers to join the provident fund. If the Government contributed to the provident fund as they contributed to the railway funds, commutation of part of the pension might not be necessary. Officers felt very strongly that they ought to have the right to commute a portion of their pension with the existing restrictions, because they looked upon pension as deferred pay. An officer who died lost his pension, but if he commuted a portion of it that portion remained for his wife and children.

75,519. The expense in connection with houses varied in different localities, and it was only in the large presidency towns that it was abnormal. In Madras it was not so bad as in Calcutta or Bombay, but houses are becoming more expensive. In Madras a small allowance was given. Superintendents received Rs. 45. He himself got Rs. 50.

75,520. In the matter of travelling allowances an officer's family should be recognised, and reasonable household effects allowed. The State should bear the whole cost of removal. He had been told by an officer that every transfer had cost him Rs. 500 over and above what he had drawn from Government. Transfers had not been so frequent of late years.

75,521. (*Mr. Chaubal.*) The Madras Engineering College had an electrical section, but the apparatus was very limited. Technical instruction in local institutions could not possibly be so good as that given in institutions in Europe, where every facility was offered for practical training. Book work might be done in India as easily as in England, but as large electrical machinery was not made in India men would have to go to England for that part of their training.

75,522. (*Mr. Abdur Rahim.*) Officers on furlough often visited telegraph workshops and other works to improve their knowledge, but if they wished to recoup themselves any part of the expense they had to obtain permission first. He did not know whether any officers had visited works at their own expense, but no doubt many men had done so. Outside the technical branch it was not of indispensable value to an officer to obtain technical experience on the present organisation of the department. Study leave was necessary to keep an officer's knowledge up to date.

75,523. (*Sir Theodore Morison.*) The objection of a good many officers to the general provident fund was that it did not make any provision for a man's family in case he died young. Even if Government paid cent. per cent. to the fund, it would not amount to anything if a man died three years after entering the service. There was a rule that if an officer insured his life the premiums could be deducted from the subscriptions to the general provident fund, and there was a veto on his raising money on the policy. Officers drew upon the provident fund for the purpose of sending their wives or children to England, and that would not be possible under an insurance scheme, but that disadvantage was small compared with the advantage which must accrue in other directions. Any amounts drawn from the provident fund had to be repaid.

75,524. (*Mr. Maulik.*) Owing to the fact that the conditions of service were going to be altered, men who had to do with technical work as well as engineering would require training, but men who were not going to do technical work would not require technical training. At present there was no necessity for a very high technical training as a technical branch was in existence, but at the same time, if a man had a knowledge of the subject, it often saved the technical officers going out to do the work. Officers should be given an opportunity of keeping their knowledge up to date as the technical department was to be abolished after the amalgamation.

75,525. He was not prepared to say whether the amalgamation scheme would be a success, but the idea was that engineering officers would have to do all the technical work, and for that purpose it was necessary to have 75 per cent. of the men from England with a very high technical training, competent to carry out technical work. The training of young officers who came from Cooper's Hill was very insufficient. He himself went to Calcutta where he stayed for two months, and was then drafted off for field service in Upper Burma, and had no opportunity of learning anything. The Cooper's Hill men were not highly trained in electrical engineering, because this was then only in its infancy when he was at Cooper's Hill.

75,526. It was open to Government, if they saw fit, to give Imperial and provincial service officers the same pay when doing the same work. The provincial service man might get the same pay in the director's grade but not in the superintendent's grade.

75,527. The complaint with regard to the warrant of precedence was that the Directors of Telegraphs were graded considerably below officers of equal status in other services.

The witness withdrew.

J. G. MORGAN, Esq., Superintendent, Telegraph Department, Trichinopoly Division

Written Statement relating to the Indian Telegraph Department.

75,528. **(I.) Methods of recruitment.**—It is suggested that three-eighths of the officers be recruited from English Engineering Colleges, and one-eighth direct from Junior Officers of the British Post Office, who would be willing to join the Indian Service; three-eighths from Indian Engineering Colleges, and the balance one-eighth be recruited from the Indian Subordinate Staff.

75,529. **(II.) Systems of training and probation.**—That officers recruited from the English Engineering Colleges be appointed for a year on probation to the British Post Office, and officers recruited from the Indian Engineering Colleges be appointed for a year on probation to the Indian Service. Both officers recruited from the British Post Office and the Indian Telegraph Department be on probation for one year in the Indian Service.

75,530. **(III.) Conditions of service**—There should be no distinction between officers recruited in India and England.

75,531. **(IV.) Conditions of salary.**—That the rates of pay should be the same for all. No distinction should be made in the rates of pay given to officers recruited in England and to the officers recruited in India. That in place of any difference of pay, a first class return passage to England be given to all Non-Indians recruited in England once in five years, and that the number of free passages to be given be restricted as follows:—

2	return	1st	class	passages	after	1st	5	years' service.
3	"	"	"	"	"	10	"	"
4	"	"	"	"	"	15	"	"
5	"	"	"	"	"	20	"	"
5	"	"	"	"	"	25	"	"
5	"	"	"	"	"	30	"	"

75,532. **(V.) Conditions of leave.**—That all officers be permitted to accumulate privilege leave to the extent of five months when such leave is to be spent out of India, otherwise the present privilege leave rules to hold good. That the conditions for medical leave and furlough as at present hold for the European Service be granted to all alike.

75,533. **(VI.) Conditions of pension.**—That the conditions of pension as at present hold for the European Service be granted to all alike.

75,534. **(VII.) Such limitations as may exist in the employment of Non-European and the working of the existing systems of the division of services into Imperial and Provincial.**—That the distinction of services into Imperial and Provincial should be abolished. This distinction at present is deeply felt by all services. It leaves the impression that Government sanction and stamp the distinction of all services recruited in India known as Provincial Services as being inferior to and quite below the level of the Imperial Service. This treatment is silently very much resented.

75,535. **(VIII.) Any other points within the terms of reference to the Royal Commission not covered by the preceding heads.**—It is suggested that (*a*) Government provide private buildings for its officers more freely. (*b*) That the travelling allowances on transfer be more liberal, and extended to cover all reasonable charges incurred by an officer breaking up his home and having to move his family from one station to another. This may be limited to actual certified charges not exceeding six First Class and three Third Class fares, plus an allowance for 40 maunds of luggage.

Mr. J. G. MORGAN called and examined.

75,536. (*Lord Ronaldshay.*) The witness was superintendent of telegraphs, Trichinopoly division, and had been elected to represent the members of the provincial service whose views were set forth in the written statement.

75,537. Members of the Imperial and provincial services were all on one list for promotion, and received promotion in turn, and the provincial service officers understood, when they joined, that they were to be treated on an equality. But when the department was reorganised in 1910 rules were brought in by which the provincial service officers lost eight years' seniority. That had now been rectified. Under the present system the pay, pension, furlough, and leave rules differed from those in the Imperial service, but there was one list for promotion. As a matter of policy and equity officers doing the same work should be paid alike. He admitted, however, that there was some difference in the circumstances of an officer recruited in England and of one recruited in India, but believed that the provincial service would object to a foreign service allowance being given to Europeans, and considered that this objection could be justified on economic and political grounds. A foreign allowance would stamp the recipients as "Foreigners" in India. It would be wise to get rid of this idea and avoid such a classification. It is strongly held that equality of opportunity of entering Government service and equality of treatment in all respects once in Government service would remove all grounds of discontent.

75,538. If under the amalgamation scheme a new traffic branch was created, quite separate from the engineering branch, the officers would no longer press for the recruitment of British post office men to the department. Failing that, the type of officers that should be taken from the British post office would be traffic men.

75,539. There was absolutely no difference between the standard of Cooper's Hill and the standard of Rurki College, where he himself was trained. In fact, the students, who passed out of Rurki, were better educated than the men who came from Cooper's Hill, and there was not much difference in practical training as between the two colleges. An engineer trained at the Rurki College had just as much chance of becoming a highly satisfactory engineer as an engineer who was trained at a college in England. That, however, did not apply entirely to the electrical branch, but only to the extent that electrical engineering was made use of in India. A certain amount of efficiency was required in electrical engineering in the telegraph department, but not a great deal, as the department had no work in setting up electrical installations, and all the training necessary could be acquired at an Indian college, supplemented by the training received in the department itself.

75,540. The number of higher posts to be allotted to the subordinate staff should be kept small. Really suitable subordinates were rare. Moveover they were not sufficiently educated, and had not the necessary social qualities.

75,541. The present rules with regard to leave were faulty in that they did not provide sufficient leave on full pay. Commutation of longer furlough on half pay to shorter furlough on full pay would meet the claims of the department.

75,542. On transfer the Government should meet the cost of moving an officer's wife and family and a reasonable amount of effects.

75,543. (*Sir Theodore Morison.*) His recommendation with regard to pay did not mean that this should necessarily be that of the provincial service. What was asked for was equality of treatment, and that, whatever was given to the Imperial officers, should be given to the provincial officers.

57,544. The number of first-class passages recommended in the written statement assumed that the officer was a married man.

57,545. (*Mr. Abdur Rahim.*) The Indian college engineers were quite as efficient as any of those who came from England. If the department could be manned efficiently by men from Indian colleges, a suitable scale of salary would be one midway between the present Imperial and provincial scales. The cost of living had gone up, and Indian officers were adopting western styles of living, and they also had heavy expenses in connection with their families.

75,546. It would be possible to get suitable European officers from England on reduced rates of pay. Private firms obtained them on less favourable terms than those given by Government and without pensions.

75,547. (*Mr. Chaubal.*) If something between the Imperial and provincial scales of pay was introduced, Englishmen would still come out to India, because the pay would even so be higher than that which they would obtain in their own country. He objected to officers doing the same work and being paid differently. It was true that it was possible to obtain in India men for even lower salaries than were now given in the provincial service, but that was simply because it was a case of "Hobson's choice." If the question was one of market price he believed an Englishman could be obtained much cheaper than he was being obtained for now.

75,548. (*Mr. Maulik.*) Previous to 1895 the students from Rurki were appointed on the Imperial scale of pay in the Public Works Department, but the pension and leave rules were different.

75,549. The provincial service had progressed backwards as far as the aspirations of the natives of India were concerned, and this was keenly felt by them.

The witness withdrew.

J. F. RODRIGUES, Esq., Officiating Presidency Postmaster, Madras; and
P. A. KRISHNAMA CHARLU, Esq., Personal Assistant to the Postmaster-General, Madras,
were called and examined together.

(*The witnesses were examined upon the written statement put in by Messrs. McMinn, Sinclair and Sri Ram—vide paragraphs* 75,213–31—*with which they generally agreed.*)

75,550. (*Lord Ronaldshay.*) Mr. RODRIGUES was officiating presidency postmaster in Madras, and had held the position for five months. His service had been entirely in the postmaster's line, except for a period of two years when he was superintendent in the postmaster-general's office. He represented the postmaster's side of the department. Mr. CHARLU was personal assistant to the postmaster-general, and held the position of superintendent of post offices. He was recruited direct and had been a superintendent for fifteen years.

75,551. Mr. RODRIGUES held that half the recruits into the grades of superintendents should be by direct nomination from "outsiders" and half by selection from the departmental officials. The general consensus of opinion in the department was in favour of recruitment of outsiders by nomination, and no views in favour of competition or restricted competition had been put forward by the officers at the conference at which the memorandum was drawn up. Mr. CHARLU added that the idea of competition was not new. It had been actually acted upon in the department, for, in the past, candidates were selected from among those who had competed for the Provincial Executive Services but had failed to get one of the guaranteed appointments. Such men had to pass the departmental test for the superintendent's grade.

75,552. At present, Mr. CHARLU said, probationary superintendents were kept waiting for appointments for about two years. That term should be fixed instead of being allowed to vary, because a man ought not to be kept waiting longer than that period.

75,553. Mr. CHARLU did not support the demand contained in the written statement for a general list for promotion for probationary superintendents throughout India. Under the present system superintendents served in their own circles. If there was an all-India list, it might be necessary to enforce service in any part of India. There were great advantages in keeping a man in his own circle, and they would be thrown away if he was sent outside.

75,554. Mr. RODRIGUES thought it was a mistake to speak of undergraduates in connection with the domiciled community, because there was no European University in India. A pass by the matriculation standard satisfied the conditions required for service in the post office. The distinction between Indians and members of the domiciled community in the matter of Educational qualifications was made because the former needed a longer education to get on the same level with the latter in the matter of English. Again, Anglo-Indians and domiciled Europeans received their education in schools, which did not give a University course, and if they were compelled to graduate at an Indian University, they would practically be cut out of the field of recruitment. The European school course was that of a high school. Mr. CHARLU said that so long as some standard of education was prescribed for Anglo-Indians, he did not desire to object to a distinction between them and Indians. All he asked was that an Anglo-Indian should not be appointed a superintendent merely because he was an Anglo-Indian, and without regard to his education.

75,555. On the subject of travelling and transfer allowances, Mr. RODRIGUES pointed out that officers had to go from one end of India to the other. He himself had been transferred from Simla to Rangoon, from Rangoon to Lahore, from Lahore to Madras, and from Tuticorin to Calcutta, and had to transport the members of his family and his household effects in each case at his own expense. The allowance now given, whether double second or double first class, was quite inadequate. He had been put to a considerable loss on each transfer. Mr. CHARLU added that a superintendent of post offices had to travel through two districts and sometimes three, whereas an officer of similar standing in another department had to travel only through two or three taluks and could keep his own conveyances. A superintendent had often to pay for his food on a dining car and had expenditure in other directions. On that ground he claimed increased travelling allowance. He had not supported the claim for better daily allowances as he was asking for a higher rate of travelling allowance, and he thought it would perhaps be unwise to ask for too much.

75,556. Mr. CHARLU said that the statement in the memorandum as to the method of pay desired was misleading, as it appeared to show that the officers preferred a graded system. As a matter of fact they desired to have a time-scale.

75,557. Mr. RODRIGUES said it would not be possible to have a time-scale for the postmasters so long as the system of paying officers according to the volume of work in each office prevailed. What the postmasters desired was that, if the pay of superintendents was raised, their pay should be raised in proportion. Thus, if the top grade of the superintendents was made Rs. 700, the top grade of the gazetted postmasters should also be made Rs. 700. Both officers were of the same class, and gazetted postmasters really exercised the powers of superintendents in their own cities. He did not in these remarks refer to the postmasters at Lahore and Rangoon (pay Rs. 600—40—800). They ranked with Deputy Postmasters-General and Presidency Postmasters under the list of chief officers and not with superintendents.

75,558. Mr. CHARLU was of opinion that if a proper time-scale were introduced the officers of this department would probably not press for compulsory retirement at the age of fifty-five. As a matter of fact he thought that some of his colleagues agree with him that it was not necessary to insist upon it as it would be a waste of Government money to retire a capable officer before it was absolutely necessary. Mr. RODRIGUES did not agree and said that the majority at the Nagpur Conference held that officers should retire at the age of fifty-five. When they came to that conclusion they had before them the possibility of their being paid on a time-scale. They understood that the pay of the higher posts of Deputy Postmasters-General, &c., would continue to be graded.

75,559. The justification for increasing the pay, dispite the fact that good officers were being obtained on the pay now given, was that twenty years ago, when the pay was fixed, the rupee went much further than it did at present. The cost of living had risen all round. Mr. CHARLU agreed that the cost of living had increased, and maintained that the best class of man was not being obtained on the amount of pay at present offered. If the pay was raised, a much better class of man would join the department.

75,560. Mr. RODRIGUES said the postmasters claimed special treatment in the matter of leave on the ground that they had to work on Sundays and holidays. There was a roster under which officers took their turn at Sunday and holiday duty, but even so, two officers had to divide the day between them, one taking the morning and the other the afternoon. Mr. CHARLU did not think the question of holidays affected the superintendents to the same extent as the postmasters.

75,561. Mr. RODRIGUES then referred to the fine fund, and said the contention was that it should be thrown in with the guarantee fund and utilised for the good of the officers.

75,562. (*Mr. Chaubal.*) Mr. CHARLU said that the reservation of 10 per cent. of the superintendentships for non-domiciled Europeans was necessary because European superintendents were required in certain emergencies, as, for instance, working with a field force, for famine work, for going out with expeditionary forces, and in hilly divisions where it would be neither convenient nor advantageous for a native of India to be employed. There was no attempt to work out the ten per cent. for each province. It applied to the whole of India.

75,563. Mr. RODRIGUES said that superintendent had to pass a certain length of time on probation, and they were given training in postmaster's work as well as superintendent's work. A gazetted postmaster was quite able to do the work of a superintendent, and a superintendent would not be unfit for the work of work of a postmaster. Interchangeability might improve the general prospects of both postmasters and superintendents. The training, however, which a probationer received as a superintendent, was not enough to make him a valuable postmaster, and he would have to be in charge of an office for some time after his probation before he could be considered to have a thorough knowledge of a postmaster's duties. Mr. CHARLU said a superintendent was quite as much a postmaster in his own way, because the duties of a superintendent included the inspection of post offices, and he could not inspect unless he knew the postmaster's work thoroughly. The postmaster also exercised the functions of a superintendent except in the matter of travelling from place to place. His own opinion was that it would be much better not only for the officers concerned but for the administration if postmasters and superintendents ran on two parallel lines until the one officer rose to be presidency postmaster and the other deputy postmaster-general. Postmasters should be debarred from promotion to deputy postmaster generalships and similar posts altogether, because they had posts which were more advantageous. The position of a presidency postmaster not only gave him the pay of a deputy postmaster-general, but also conveniences which the deputy postmaster-general did not enjoy. Interchangeability below these positions would not be suitable.

75,564. (*Mr. Abdur Rahim.*) Mr. RODRIGUES said that in asking that domiciled European candidates should be undergraduates the idea was to fix some educational standard, as at present there was none. Most, however, had reached the high school standard. They started with two years' advantage over Indian candidates. There were certain duties which the European was better fitted to perform owing to his mother-tongue and whole environment having been English. A lower standard was not fixed in order to obtain a larger field of recruitment amongst Europeans

75,565. (*Sir Theodore Morison.*) Mr. CHARLU said the graded scale put forward would have been a little more beneficial than the time-scale one, considering number of appointments suggested for each grade, but if the number of appointments in the higher grades were reduced, the officers concerned would not profit ar all, and it was therefore now thought wiser to accept the incremental system.

75,566. Mr. CHARLU then said that it was a fact that a presidenncy postmaster could only rise to Rs. 1,200, whereas the deputy postmaster-general went up to Rs. 1,400, but the presidency postmaster had a free house, which was often worth more than Rs. 200. Mr. RODRIGUES said that the postmaster was given rooms in the post office building which was sometimes situated in a noisy and thickly populated quarter of the town. If left to himself, a presidency postmaster would not pay anything like a Rs. 200 rent and would live in a more quiet and salubrious part of the town. The original object in requiring the postmaster to live at the post office was in order that he might be able to deal with any urgent mails coming in and going out, and guard the large amount of cash in his office.

75,567. (*Mr. Sheridan.*) Mr. CHARLU said there had been a great increase in the work and responsibility of postmasters since the original rates of pay were fixed, and this was why the pay of postmasters was raised from time to time. The recommendations made on behalf of the postmasters and superintendents were also intended to apply to railway sorters. The railway sorters were hard-worked men and should be much better treated than they were at present. They were invalided much earlier than most post office officials, especially in connection with eyesight. Therefore they were entitled to some consideration.

75,568. Mr. CHARLU then stated that in any scale of pay adopted there should be an efficiency bar. In a graded scale he would place the efficiency bar at Rs. 500, after which a man should only be promoted if found efficient. There should be no departmental examination at this stage, promotion being determined by the head of the circle. Mr. RODRIGUES said there should be a similar bar in the case of postmasters at Rs. 500. It would be rather late in life to hold a departmental examination, but some sort of test was needed. Mr. RODRIGUES said that it would be a fair plan to have a provincial and imperial list of gazetted postmasters, one consisting of those willing to serve only in one province, and the other of those willing to serve anywhere. The rates of pay should not be the same. The man, who was prepared to go wherever he was sent, should receive more consideration than the man who did not wish to leave his province. Mr. CHARLU considered it unnecessary to have a provincial and an imperial list for superintendents because a superintendent was liable to be transferred to any part of India, and if he refused to go, would risk losing his place. A superintendent, however, should be allowed to work as far as possible within his own province, where he had the advantage of a knowledge of the language and of the people.

The witnesses withdrew.

At Bombay, Monday, 9th February 1914.

PRESENT:

THE EARL OF RONALDSHAY, M.P. *(in the Chair).*

SIR MURRAY HAMMICK, K.C.S.I., C.I.E.
SIR THEODORE MORISON, K.C.I.E.
MAHADEV BHASKAR CHAUBAL, Esq., C.S.I.
ABDUR RAHIM, Esq.

And the following Assistant Commissioners:

S. C. W. ROSE, Esq., Officiating Deputy Postmaster-General, Bombay.
G. W. TALBOT, Esq., Superintendent of Telegraphs, Central Telegraph Office, Bombay.
M. S. D. BUTLER, Esq., C.V.O., C.I.E. *(Joint Secretary).*

D. S. CAPTAIN, Esq., Superintendent of the Post Office, Poona;
C. J. E. CLERICI, Esq., Superintendent of Post Offices, Rájputána Divison; and
D. J. MURTRIE, Esq., I.S.O., Presidency Postmaster, Bombay;
were called and examined together.

(The witnesses were examined upon the written statement put in by Messrs. McMinn, Sinclair, and Sri Ram—vide paragraphs 75,218–31.)

75,569. *(Lord Ronaldshay.)* Mr. MURTRIE started in the department as a probationer on Rs. 15 a month in July 1884, and remained in the subordinate line till 1900, when he was appointed a Superintendent after examination. Five years later he was appointed an Assistant Postmaster in the Rangoon Post Office, and then came to Bombay, where he acted for 18 months as Presidency Postmaster. He was then transferred to Simla, and acted as Assistant Director-General and Inspector-General of the Railway Mail Service, and was Chief Superintendent and Postmaster of the Coronation Durbar, 1911. He then returned to Rangoon as Postmaster, and was now substantive Presidency Postmaster in Bombay. Mr. CAPTAIN entered the department in 1897 as a probationer on Rs. 60, and after three months' training was appointed an Inspector, and held the position for three years. He then acted as Head Clerk to the Postmaster-General for 18 months. He then passed the Superintendent's examination, and in 1901 was made Personal Assistant to the Postmaster-General. In 1902 he was confirmed as Superintendent of Post Offices, and continued to act as Personal Assistant. He was next put in charge of a division and was now Superintendent, second grade, Rs. 400 to Rs. 500. Mr. CLERICI started in the Railway Mail Service 13 years ago, and then went on to the Director-General's Office and to the Postmaster-General's Office, Nágpur. He was now Superintendent in Lower Rájputána, third grade, Rs. 300 to Rs. 400.

75,570. Mr. CAPTAIN said that, under the present system, the Postmasters were recruited exclusively from the subordinate ranks, and although some were very good the average was not quite satisfactory. As the operations of the Post Office became more complicated, and the duties more responsible, it was necessary to have a sprinkling of young and energetic men, who would make competent Postmasters after a suitable training. Therefore a limited number of men should be recruited as Probationary Postmasters, starting on Rs. 100 a month. Mr. MURTRIE favoured this suggestion, but considered that Superintendents should be recruited in the same way. In his written statement he had said that the proportion should be as two to one, but he was inclined to think now that it ought to be in equal proportions, because, if it was made two to one, a larger number of outsiders would be brought in, and the men in the department would be discouraged. The work of a Postmaster was of a technical character, but not so much so that it required men to come from the bottom grade. If a man was placed in a large office, and had intelligence, he soon picked up the work, and on passing the departmental examination ought to make a good Postmaster. Direct recruitment would give a class of men better educated than those at present in the service. On the small pay now given it could not be expected that highly educated men would join the service. Mr. CAPTAIN added that, during the last seven years, 16 probationary Postmasters had been appointed, but recently it had been decided to discontinue the system. It should, however, be continued, in order to obtain a good class of Postmaster in the future. He believed it was discontinued because the selection was not very happy in some cases, but that might be due to exceptional circumstances, and the difficulty could be overcome by taking suitable precautions in the selection.

75,571. ALL THREE WITNESSES then said that the general sense of the department was in favour of recruitment by nomination. There was no special demand for any system of competition.

75,572. Mr. CAPTAIN explained that probationary Superintendents were kept waiting for appointments for about two years on an average. This was a satisfactory period. In some cases men had to wait for three years, while in others they were appointed within six or 12 months. No one should be appointed to the permanent charge of a division, unless he had gone through at least one year's training, and the maximum should be two years. If a man did not pass the departmental test and give satifaction within two years he should be asked to leave the department. If a vacancy was not available at the end of two years he would naturally have to wait. Mr. CLERICI concurred.

75,573. Mr. CAPTAIN desired to withdraw the recommendation made in the corporate memorandum in favour of an all-India system of promotion for probationary Superintendents. There was now one list and this might be continued, but the practice by which the Director-General ordinarily appointed a man recruited in a particular province to work in that province, unless the interest of the service required him to serve in another, was advantageous, and should not be given up. A man working in his own province had the advantage of a good knowledge of the vernacular and of the local conditions. Mr. CLERICI, on the other hand, wished for an all-India system because it gave more justice all round. Otherwise a junior might rise above a senior man. A case of the kind had occurred in Bengal, where a Mr. Datta was kept waiting for four years, whilst junior men passed over his head. With an all-India system Mr. Datta might have been sent to serve on the North-West frontier, and he might or might not have liked that personally, but a man who joined the post office ought to be ready to go anywhere. To this Mr. CAPTAIN replied that the circle system was not now slavishly adhered to, and this gave the necessary elasticity. The Director-General, if he found that a man in a particular circle had to wait too long, occasionally drafted him into another circle, and in this way a man from Bengal and a man from the United Provinces had been brought into the Bombay Circle. Another way of meeting the difficulty would be to date seniority from the day that each officer passed the Superintendent's examination, provided he was satisfactory in all other respects. If a man had to wait for four years, he should be graded, when his turn for appointment came, above the men who were junior to him as candidates. Mr. MURTRIE said the department as a whole were now in favour of Mr. CAPTAIN'S view, and therefore the recommendation

in the written statement might be regarded as practically withdrawn.

75,574. Mr. MURTRIE said that the European school course did not give to the domiciled community the advantages which Indians possessed. The schools for the domiciled community did not give the instruction necessary for their scholars to become graduates in the Indian Universities. The Cambridge senior examination for the domiciled lad compared very favourably with an Indian graduate's examination for the Indian, and members of the domiciled community passing the Cambridge senior, would, from an intellectual point of view, be on terms of equality with Indian graduates. Mr. CAPTAIN believed that the Cambridge senior was on a par with the Bombay Matriculation or School Final examination, and did not come up to the B.A. standard. His reason for proposing the Matriculation or the Cambridge senior test as suitable for Anglo-Indians was on account of the backward education of the domiciled community, which laboured under special disadvantages. Their education, for one thing, was more costly. The present standard, however, should be gradually raised and brought up to the B.A. standard. If the standard were raised at once, the members of this community would be debarred from getting appointments in the department.

75,575. Mr. CAPTAIN said that the claim for an increased diem allowance was based partly on grounds which were common to other services and partly on special grounds. The charge of a Superintendent was much larger than that of most other executive officers. It usually included two districts. Also the nature of the work was such that only very short halts were made at different places, whereas officers of other departments usually halted for about a week at each place. It was laid down in the departmental rules that a Superintendent should not ordinarily take more than two days for the inspection of a fair-sized sub-office, and one day for the inspection of a branch office. Superintendents had to go round their charge twice a year, whereas most other officers went round only once.

75,576. Mr. MURTRIE allowed that Postmasters received their houses rent-free.

75,577. Mr. CAPTAIN preferred a time-scale of pay, and said that that was the general view of the service. It was only on the assumption that a time-scale would not be granted that the graded system was put forward in the written statement. If the graded system was adopted a suitable number of appointments should be given in the higher grades. When the present first grade of Rs. 500 to Rs. 600 was created it seemed on paper that the officers had an increase, but as the number of appointments in it was only eleven few got a chance of rising to that grade. He did not consider that any efficiency bar was necessary in the case of Superintendents. Every man who worked satisfactorily should have the prospect of rising to the top of the Superintendent's grade. For the higher grades of Deputy Postmaster-General, Presidency Postmaster, Inspector-General, etc., there should be selection. Mr. CLERICI endorsed Mr. CAPTAIN'S remarks.

75,578. Mr. MURTRIE said that the time-scale could be applied even to Postmasters to a certain extent. For instance the pay of the Lucknow Post Office was fixed at Rs. 500 to Rs. 600, and supposing a time-scale was in existence, it would be for the Director-General to say that no man should be put into the office unless he had nine year's service. The Director-General could fix a schedule as to the number of years' service a man must have to qualify him to hold charge of some important offices.

75,579. Mr. CAPTAIN said that, if a time-scale were introduced for Superintendents, he would not press for the rigorous application of the fifty-five years' rule for retirement although that was desirable, but he would make it compulsory in the higher offices, because otherwise promotion would be blocked. Mr. CLERICI thought there should be one rule for all, and that all officers should retire at the age of fifty-five, and that was the view held by the bulk of his colleagues.

75,580. Mr. MURTRIE pointed out that in the year 1907, when Postmasters were drawing a commission on the sale of stamps, they were on the whole better off than the Postmasters of to-day. The commission on the sale of stamps amounted to something like 3½ lákhs, whereas the revised grades of pay, which were fixed for Postmasters on the abolition of the commission system, only cost 1½ lákhs. Therefore, the total emoluments of Postmasters were less to-day than they were before. That had resulted in no deterioration in the personnel because recruitment had been solely from the ranks.

75,581. Mr. CAPTAIN said there would be an improvement in the personnel if the pay was raised. At present a suitable class of men was obtained simply owing to the fact that in the struggle for existence a young man had to accept what was offered, but when he was placed in a responsible position he should be given a suitable wage.

75,582. Mr. CAPTAIN said that the rules did not lay down that officers had to work on Sundays, but the circumstances of the department were such that they had to do so at least on half the Sundays in the year. Mr. MURTRIE added that the hardship was greater in the case of Postmasters than in that of Superintendents. A Superintendent was not bound to work on Sundays except to make up arrears, but a Postmaster had to do so because he was in charge of the office. There was a roster for the clerks, who took so many Sundays off, but every Postmaster had to be at his office for at least two hours in the morning and two hours in the afternoon on every Sunday and on holidays.

75,583. Mr. CAPTAIN said that subscription to the General Provident Fund was compulsory for Europeans, but optional for Indians. In the upper grades, the fund was availed of largely, but not in the lower grades. If the pension scheme were modified, and a suitable Provident Scheme introduced, it would be in the interest of the service as a whole. The work in the post office was very hard, and in many cases officials broke down, after putting in twenty-five or twenty six years' service, before they received their pensions, but if a Provident Fund were introduced, and an officer died before completing his service, his family would get some benefit, instead of, as now, being left destitute.

75,584. Mr. CAPTAIN said that the guarantee fund had been built up by annual deductions from the salaries of postal officials up to about ten years ago, when deductions ceased. At that time eight annas a year were deducted from the pay of every officer, and a large fund had accumulated, the interest of which was mainly utilised in meeting losses which the department suffered through the dishonesty of postal officials. He had no objection to its being utilised in that way, but there was a large balance left over each year, and that balance should be utilised in the interests of the men who had contributed towards the fund, and should not be allowed to go on accumulating as at present. It should be administered by a departmental committee, representing the higher officers and Superintendents and Postmasters. At present the Director-General himself administered the fund. The balance went on accumulating simply because no one had taken the trouble to formulate a scheme for utilising it. Mr. MURTRIE thought there was no fear that the interest would be swallowed up in meeting defalcations, as dishonesty in the post office was quite an exception. Year by year the deductions from the guarantee fund on account of the losses sustained were lessening. Also there was hardly any need to meet the demands from the guarantee fund, because every subordinate gave security, either in cash or by a bond. The Empire Life Assurance Company issued guarantee bonds up to the amount of ten times an officer's salary, and these held good for ten years. After ten years' approved service a man was exempted from furnishing any further security.

75,585. Mr. MURTRIE considered that interchangeability as between Postmasters and Superintendents would make for efficiency. Men working in the Postmasters' line gained very little experience of a Superintendents' work. In the same way a Superintendent had little opportunity of making himself acquainted with postal traffic. If both appointments were interchangeable, when men reached the top, they would be good all-round men. Mr. CAPTAIN, on the other hand, considered that in the present circumstances interchangeability would not make for efficiency, because Postmasters were recruited exclusively from the subordinate ranks, and when a Postmaster reached gazetted rank he was fairly advanced in age, and not active enough to take charge of a division, and he would not care for the change. He thought the two branches should be kept in watertight compartments. Mr. CLERICI did not see any need for interchangeability as matters were working all right now. To this Mr. MURTRIE replied that the younger Postmasters were in favour of interchangeability, and this feeling would grow stronger, if the suggestion for the direct recruitment of first class Postmasters was adopted. At present, when a Superintendent reached high office, he had only seen the work in his own line, and knew nothing of the work of a Postmaster.

75,586. (*Sir Murray Hammick.*) Mr. MURTRIE thought both Postmasters and Superintendents suffered by not knowing each other's work. Promotions to Deputy Postmaster-Generalships were made mostly from the Superintendents, and if Postmasters qualified as Superintendents they would have a better chance of being promoted to the higher appointments. Out of 171 Superintendents the records showed that 34 began life as Postmasters, whilst out of 35 gazetted Postmasters 6 were Superintendents, so that there was interchangeability to some extent already.

75,587. The question of travelling allowances was very much affected by the rule with regard to the day being counted from midnight to midnight. If officers travelled by rail, they received a free pass and a single fare. If they travelled by road, they received mileage, limited to the diem allowance of Rs. 4, unless the journey was beyond twenty miles, when the allowance was eight annas a mile. The officers would be satisfied with either an alteration of the rule governing the twenty-four hours halt, or an increase in the day allowance or the mileage allowance. There were many incidental expenses such as bullock-carts, tongas, coolies and expenses of meals at refreshment rooms, and also their servants had to be paid for. As a rule a Superintendent made out a programme, for three months, and moved from one post office to another as far as possible, but very often circumstances arose which compelled him to change his dates. It paid an officer much better to go a long distance to a post office than to take a short journey. At a head post office it might be necessary to stay a week, and then the officer could draw Rs. 4 for each day's stay, but that only happened once in six months.

75,588. (*Mr. Chaubal.*) Mr. CAPTAIN said that all probationary Superintendents were attached to a head post office for about six months to learn post office work, so that they had a fair knowledge of a Postmaster's work, sufficient to enable them to do the duties of a Postmaster satisfactorily. Head post offices were also inspected by Superintendents twice a year. A probationary Superintendent would not give so much attention to accounts as a probationer who was destined for a Postmastership. For the gazetted Postmasters there were places ranging from Rs. 300 to Rs. 800, whilst the pay in the Superintendents' ranks ranged from Rs. 200 to 600. The higher posts of the Postmasters were not given to Superintendents, but were kept exclusively for the Postmasters. There were many Superintendents who did not wish to be Postmasters, and many Postmasters, who did not like, and were not qualified, to be Superintendents. The qualifications for the two officers were quite different. A Postmaster's work was mostly sedentary and he had not to act in sudden emergencies as a Superintendent often had to do. Unless the system of recruiting Postmasters was radically changed, interchangeability was bound to be a failure. There were instances in which officers, appointed as Superintendents, had been found unsuitable, and had been drafted into the Postmasters' line, and occasionally, if the Director-General saw that a Postmaster was a competent and active man, he would draft him into the Superintendents' line. He did not mean that both branches should be absolutely watertight, but that interchangeability should be allowed only in exceptional cases at the discretion of the Director-General.

75,589. Under the old system of appointing probationary Postmasters, the Postmaster-General selected a suitable man from amongst the applicants who came forward. Sometimes a man who applied for a Superintendent's appointment and who was considered by the Postmaster-General to be unsuitable for that appointment was offered the post of a probationary Postmaster. The posts were not advertised.

75,590. Inspectors were appointed from the ranks of subordinate Postmasters and clerks in post offices, and to a very limited number by direct recruitment. In the Bombay Circle the pay of Inspectors was Rs. 60, Rs. 80 and Rs. 100. When a man reached the grade of Rs. 40 as a Sub-postmaster or clerk, if the Divisional Superintendent thought he was likely to make a good Inspector, he recommended him to the Postmaster-General, and the Postmaster-General might appoint him. After working for a few years he might be allowed, if competent, to go up for the Superintendent's examination, and on passing the test might, in exceptional circumstances, be appointed Superintendent. Otherwise after reaching the grade of Rs. 100, he remained there until all his juniors came up to the grade and then went to the Postmasters' line on Rs. 100 or Rs. 150, if young enough for promotion.

75,591. (*Mr. Abdur Rahim.*) Mr. CAPTAIN said, that in making the selection of Superintendents or Postmasters, the Postmaster-General was not assisted in any way by the deputies, unless the Postmaster-General knew that the Deputy had seen the man and knew him. There was no hard and fast rule with regard to educational qualifications, but it was generally insisted that an Indian should be a graduate. Directly appointed men were recruited usually between the ages of twenty-one and twenty-five. Superintendents recruited from the department had an age limit of thirty-five years

75,592. There was no rule prohibiting interchangeability, but in practice Superintendents and Postmasters were kept separate. A young man usually took his degree in the Bombay University between the ages of twenty and twenty-three and the Cambridge senior examination between eighteen and twenty.

75,593. Mr. MURTRIE said that for the Anglo-Indian recruit an education up to the Cambridge senior was good enough, because the field of selection was small, and a concession had to be made in their case. He would not say that a man who had taken the Cambridge senior would be fit to compete for a degree with any chance of success.

75,594. (*Sir Theodore Morison.*) Mr. MURTRIE said there was no difference between a first class Postmaster and a gazetted Postmaster.

75,595. Mr. CAPTAIN said that, when a Postmaster reached the Rs. 200 grade, he entered an all-India list. Up to Rs. 200 he was on a Provincial list. He did not mean that a probationary Postmaster should be appointed a gazetted Postmaster on the completion of his probationary period, but that he should be drafted into the ranks of second class Postmasters, and remain in that rank for about five or ten years before going into the gazetted rank. The pay of a probationary Superintendent should be Rs. 150, and that of a probationary Postmaster Rs. 100. A probationary Postmaster need not be an honours graduate, but probationary Superintendents might be. There were many honours graduates from the Indian Universities in the service now, men who had taken first class and second class degrees. The present class of recruit was suitable for the work, and he would admit

that, if the work was efficiently done now, there was no advantage in having a better personnel.

75,596. Mr. MURTRIE said the fact that a bond was required from Postmasters reduced the necessity for having a guarantee fund to meet losses, because the company, which issued the bond, paid for losses up to the extent of the bond, if a fraud was proved against the individual, who had given it. There were not a large number of cases in which the loss could not be traced to any individual, and the department bore such losses.

75,597. (*Mr. Chaubal.*) Mr. CAPTAIN said that the rule that 10 per cent. of the appointments of Superintendents should be reserved for non-domiciled Europeans had been in existence for at least twenty years. It was made for special classes of work, such as field service, and service in frontier provinces, where non-domiciled Europeans were considered to be more suitable. He believed the Anglo-Indian and the Indian Superintendents could do the work satisfactorily. The non-domiciled European was quite ignorant of the vernacular, and therefore could not do the work as well as a man recruited in India. Another objection was that, he was recruited straight into the grade of Rs. 200 and placed above men recruited in India, and he did not go through the same training as Superintendents recruited in India.

75,598. (*Mr. Rose.*) Mr. CAPTAIN believed there were men who would not join the service, if they were recruited on one list for Postmasters and Superintendents, as some came in purely for the Superintendents' line. There were Postmasters getting from Rs. 100 to Rs. 200, and also Postmasters on Rs. 300 and upwards. Their duties in the main were the same, but the importance of the offices differed. The duties of Postmasters on Rs. 300 and upwards were more like those of second class Postmasters than those of Superintendents. Postmasters on Rs. 300 and upwards had Superintendents' powers with regard to their own office, and in some cases town offices were under them. In some cases it might happen that a good man, who could not obtain a Superintendent's appointment, would take a Postmastership, but others would rather join other departments than work as Postmasters.

75,599. Candidates recruited from outside the department would have to have some educational qualification, a good physique and certain social qualifications. For a Superintendent more importance should be attached to social qualifications than for Postmasters, because the Postmaster had not to mix with the district officers to the same extent. The nature of the work compelled a Superintendent to mix with the Commissioner, Collectors, Assistant Collectors, Engineers, Superintendents of Police, Forest officers, etc. Mr. MURTRIE did not agree that a Superintendent was a better man than a first class Postmaster. A first class Postmaster had to be as resourceful a man as a Superintendent. Mr. CLERICI said that a first class Postmaster had much more routine work than a Superintendent. The Postmaster had to deal with a number of men on the spot, whereas a Superintendent had his men scattered about in two or three districts. Mr. CAPTAIN said that the Cambridge senior and the Matriculation should be the lowest educational qualification for the domiciled community, but if any other suitable standard was introduced he would have no objection to it. Mr. CLERICI thought it was not necessary to have a fixed standard for the domiciled community. Mr. CAPTAIN said that the request for an increase of pay for Superintendents was justified on the ground that the cost of living had risen all round, and that pay which was suitable thirty or forty years ago was not now sufficient. Mr. CLERICI said that the work was also growing more difficult and was of a much higher standard. Mr. MURTRIE said he had no figures to show that the calls on the guarantee fund were lessening, but he found from the annual reports that they were somewhat less than they were in years past. Mr. CLERICI pointed out that the interest on the fund was growing, and that therefore the demands must be less. Mr. MURTRIE said that the fund might be disposed of according to the suggestions in the written statement, but if that could not be done it might be donated to Government to form the nucleus of the money needed for building a post office at the Imperial Capital, with a rotunda to hold the records of the history of the post office in India.

The witnesses withdrew.

R. T. GIBBS, Esq., Director and Superintending Engineer of Telegraphs, Bombay and Central Circles, called and examined.

(*Mr. R. T. Gibbs was examined upon the corporate written statement put in by Messrs. Streatfeild-James and Thomas—vide paragraphs* 75,269–78.)

75,600. (*Lord Ronaldshay.*) Witness said he came out from Cooper's Hill in 1886, and was appointed an Assistant Superintendent, and went through the various grades of the department. He was appointed Director and Superintending Engineer of Telegraphs, third class, last year. He agreed with the general memorandum, which had been put in, subject to a few modifications.

75,601. Under the proposed scheme of amalgamation the engineering branch was responsible for the construction and maintenance of telegraph lines. Given a sufficient number of trained officers, it would prove a success and give an efficient service. It was already an improvement over the circle scheme in that it allowed officers to concentrate their energies on engineering matters, without their time being taken up by going into traffic details. The life of an engineering officer was a very strenuous one. He had to be continually on tour, and could seldom halt for more than one day at any one place. The posts in his division covered 5,400 miles, and he had only two officers under him.

75,602. With regard to the traffic branch he could not speak with any certainty, but he thought that under the new scheme there was bound to be a certain loss of efficiency. It appeared to be a retrograde step to give the charge of that branch almost entirely to promoted subordinates. Such officers could not exercise as good a control over the staff as the officers were able to do under the old system. Before the circle scheme came into force in 1910 officers were posted at all the more important stations from a traffic point of view, and had a very close control over the staff at their head-quarters offices. When the circle scheme was introduced all officers were concentrated at the most important stations, and there was a loss of efficiency and control. The Telegraph Masters had no superiors near at hand to whom to refer in cases of difficulty. Under the amalgamation scheme he thought matters would not be better. The traffic officers would have far larger areas than they had before, and would have to rely on the Telegraph Masters to a much greater extent than under the circle scheme.

75,603. His suggestion was to bring out officers from the British post office, after ten years' service in England, to serve in India for a period of two years at Rs. 600 or Rs. 1,000 a month. If they could not be obtained at Rs. 600, terms would have to be made with them which might might amount to as much as Rs. 1,000. They would not be on any cadre, and they would simply revert to the British post office at the end of the time. Practically they would be in India on deputation.

75,604. An English training was very necessary for engineering officers as there were no adequate facilities in India for electrical instruction. In future there would be still greater difficulty in training officers in India, because electrical science was going ahead very rapidly, and all the best trained officers would be men trained in Europe. He attributed this difficulty both to the deficiencies of the Indian Engineering Colleges, and to the lack of facilities for studying applied electrical engineering in India. He

was acquainted with the standard taught at Rurki, and did not think it was adequate. There was no chance of seeing large electrical works in India, such as wireless telegraphy, large telephone exchanges, or cable work. At the age of eighteen a native of India should go, either to an English University, or to an English Engineering College, and take the regular course prescribed for an Electrical Engineer, and pass the B.Sc. If that were done, he would see no objection to half the recruitment being in England and half in India.

75,605. He recommended the promotion of subordinates to the amount only of one-eighth. He did not think it followed that, if more chances of promotion were given to Deputy Superintendents, a better class of men would be obtained. The experience officers obtained as Deputy Superintendents was valuable to them, and qualified them for the higher grades of the service, but he was of opinion that promotion to the extent of one-fourth for them would be too much.

75,606. He did not distrust pure nomination but preferred an open competitive examination in order to ensure the best stamp of man being obtained. A certain number of nominated men had come from England since Cooper's Hill closed, and there were six men in the service at present who had not come from Cooper's Hill. He did not think that his scheme of selecting candidates, after they had passed a competitive examination, would lead to invidious distinctions. The needs of the departments were so great that the best stamp of man had to be obtained, and that could only be done by selecting from those who had passed the competitive test.

75,607. In order that engineering officers might be thoroughly trained they should be given six months' study leave every three years, until they became Superintendents. The six months would consist of three months' privilege leave, and three months on deputation, and Government should pay the fare one way and the officer the other. He did not think six months every three years was too long a period for a man to be absent from his work.

75,608. If the Head Telegraph Officer's salary was raised to Rs. 3,000 he did not think he could still press for the Director-Generalship.

75,609. A time-scale was preferable to a graded scale.

75,610. He had read the written statement sent in by the members of the Provincial service, but did not agree with it, and he did not think there was any real grievance in the department. Certainly the Provincial officer had no ground for complaining of the manner in which he was treated by the Imperial officers. The term Provincial service might well be abolished, and the pay might be raised.

75,611. There was no justification for a man recruited in India claiming the same pay as the man recruited from Europe, as the Indian-recruited man had no expense in the way of sending his family to England or of going to England himself. He would not object to the pay being made the same, and a foreign service allowance being given to men recruited in England, and that might mitigate any feeling which might exist in the Provincial service.

75,612. There was some difficulty in obtaining leave, and this was due to the shortage of officers produced by the failure to recruit pending the introduction of the amalgamation scheme. But there was no acute grievance.

75,613. If retirement was allowed after twenty years' service, a man might then be about forty-one years of age, and this was rather young for him to draw a pension from the State. Few, however, would take advantage of the opportunity, as it would not be worth their while to do so. But the possibility of being able to retire on pension after twenty years' service should not lightly be thrown away, and the possibility appealed to men to join the department. There had, in practice, been very few cases in which men had retired after twenty years.

75,614. The pension asked for of 700*l.*, after thirty years' service, should be on a non-contributory basis, as in India men could save nothing from their pay, whilst in England it was impossible to make both ends meet on 437*l.* 10*s.*, which was the ordinary pension of a man of over twenty-five years' service. The Indian Medical Service had 700*l.*, and the Telegraph Department, like the Indian Medical Service were liable to be called upon for service in the field.

75,615. The difficulty of obtaining houses varied very much in different localities. In giving transfer allowances an officer's family should be recognised, and a reasonable amount of effects allowed for.

75,616. The Provident Fund did not take the place of commutation of pension, and the officers desired power to commute a portion of their pension without any of the restrictions which were now imposed.

75,617. (*Mr. Abdur Rahim.*) The only facility in Bombay for studying electrical engineering was the Tata Electrical scheme, which would be opened shortly. At present it was only at Rurki and Sibpur that instruction in electrical engineering could be obtained, and at Sibpur subordinates were also educated. The training at Rurki and Sibpur was not sufficient, and for a long time to come it would be necessary for students to go to England.

75,618. He agreed with the principle that men doing the same work should be given the same pay, but he thought the Sate should take into consideration the expenses to which an officer might be put. He would not, however, carry that so far as to say that the Government would be justified in paying members of aristocratic families higher salaries than were paid to officers belonging to other families. The expenses of a European in India were not on the same footing. They were inherent in their position as exiles from their own country.

75,619. (*Mr. Chaubal.*) He was in favour of an officer being paid what he would receive in his own country, plus a certain amount for serving in a foreign country.

75,620. (*Sir Murray Hammick.*) The best men for the department would be men who were educated in England, and afterwards chosen by the selection board. He would have no selection in India, so that an Indian would have to go to England for training. He would insist upon Indians being educated in England up to the B.Sc., which should be taken in some good University.

75,621. A certain minimum of Europeans was necessary in the telegraph department, and the question of pay depended entirely upon what the best Europeans would take to come out to India.

75,622–77,743. (*Mr. Talbot.*) It was not correct to say that the reason why not more than two Postmaster-Generalships were provided for the telegraph department was that no more than two officers could be found who were duly qualified. The only telegraph officer who had been tried was admittedly successful, and there were other telegraph officers who were just as capable. Young civilians were appointed Postmasters-General without any special training, whereas telegraph officers had a thorough knowledge of their own department, and as telegraph traffic would be amongst the duties of future Postmasters-General, telegraph officers would seem to be eminently fitted for the appointment.

The witness withdrew.

LIST OF APPENDICES.

I. CORRESPONDENCE relating to the SCHEME for the PERMANENT AMALGAMATION of the POSTAL and TELEGRAPH SERVICES in INDIA; viz.:—

(i) Despatch from the Government of India to the Secretary of State for India, No. 324, Finance Department, dated Simla, 30th October 1913.

(ii) Despatch from the Secretary of State for India to His Excellency the Right Honourable the Governor-General of India in Council, Telegraph, No. 5, dated India Office, London, 6th March 1914.

(iii) Government of India Resolution No. 3062—3066-101 (Department of Commerce and Industry, Post and Telegraph Establishments), dated Simla, the 24th April 1914.

II. EXTRACT from the GAZETTE OF INDIA of the 20th September 1913, regarding the POST OFFICE GUARANTEE FUND.

III. LETTER from the DIRECTOR-GENERAL of POSTS and TELEGRAPHS, No. 168 P.G., dated Calcutta, 11th March 1914, regarding the POST OFFICE GUARANTEE FUND.

IV. STATEMENT of the CIVIL APPOINTMENTS on Rs. 200 a month and over held by EUROPEANS, ANGLO-INDIANS, and INDIANS, on the 1st April 1913, in the POST OFFICE of INDIA.

V. STATEMENT of the CIVIL APPOINTMENTS on Rs. 200 a month and over held by EUROPEANS, ANGLO-INDIANS, and INDIANS, on the 1st April 1913, in the TELEGRAPH DEPARTMENT.

VI. INDIAN TELEGRAPH DEPARTMENT: NOTICE REGARDING FUTURE RECRUITMENT.

VII. OFFICIALS and NON-OFFICIALS who furnished WRITTEN EVIDENCE to the ROYAL COMMISSION in connection with their INQUIRY into the POST OFFICE of INDIA and TELEGRAPH DEPARTMENT, but who were not ORALLY EXAMINED.

APPENDIX I.

(Referred to in paragraphs 75,146 and 75,152–3—Mr. Maxwell's Evidence.)

CORRESPONDENCE relating to the SCHEME for the permanent AMALGAMATION of the POSTAL AND TELEGRAPH SERVICES in INDIA.

(i) *Despatch from the Government of India to the Secretary of State for India, No. 324, Finance Department, dated Simla, the 30th October 1913.*

MY LORD MARQUESS,

IN our despatch No. 39 (Telegraph Establishment), dated the 13th July 1911, we submitted for Your Lordship's approval a proposal for the combination of our Post and Telegraph Departments under a single head, and we explained that this proposal was a preliminary step towards the amalgamation of those two great Departments, an object which Lord Morley, in his despatch No. 24–Telegraph, dated the 3rd December 1909, desired us to keep steadily in view, taking into consideration the advantages from the points of view of administration, public convenience and economy which might be derived from such amalgamation.

2. As a further step in the same direction, following upon a suggestion made by Your Lordship, we introduced during last year a scheme of experimental amalgamation in the Bombay and Central Circles (to which Your Lordship's assent was conveyed in your Telegraph despatch No. 21, dated the 16th August 1912), and this arrangement has since continued in operation.

3. After a few months' experience of the working of this experimental amalgamation, our late Director-General of Posts and Telegraphs submitted in November last a complete scheme for the amalgamation of the two Departments throughout India, and we have now the honour to forward the scheme for Your Lordship's approval. Sir Charles Stewart-Wilson has formulated his proposals with the greatest thoroughness and the most complete mastery of his subject, but we have thought it desirable in this despatch to recapitulate in a more concise form the main points at issue, which we shall endeavour to do in the following paragraphs.

4. The fundamental principles of the scheme are the separation of the engineering and traffic work of the Telegraph Department, the transfer of the latter to the control of Postmasters-General, and the recruitment of engineers for engineering work only and of traffic officers for traffic work only. Under the existing organization, the administrative and executive officers of the Telegraph Department are responsible for both engineering and traffic work, the latter occupying rather more than half of their time. Under the present proposals, telegraph traffic will be transferred to the control of Postmasters-General, who will be assisted in the discharge of their new and additional duties by a group of officers of different degrees of importance and occupying positions corresponding to those of the officers performing analogous duties in the Post Office. These officers will be provided by the reduction in the present numbers of the administrative and executive officers of the Telegraph Department, which will become possible when the latter no longer have to deal with traffic work as well as engineering. Their relief from traffic duties and specialisation in engineering will enable these latter to take over a part of the duties now performed by the superior officers of the Technical Branch, the strength of which will thus become susceptible of some reduction.

5. It will be convenient now to give a summary of the details of the proposed organisation. The present constitution of the Post Office is not affected by the proposals, except in so far as the Director-General of that Department will become also the permanent (as he is now the provisional) head of the Telegraph Department. (This will involve a slight amendment of the Post Office and Telegraph Acts, which will be undertaken in due course.) Under his control, in connection with telegraphs, in the Telegraph Department, will be three branches—Engineering, Traffic, and Technical. A separate Traffic Branch exists already, but it consists only of a small group of Deputy Superintendents—56 in number—and the greater portion of the subordinate staff; and the fact that the engineering staff will in future undertake no traffic duties makes it necessary to provide for a considerable strengthening of the Traffic Branch. Similarly, a Technical Branch consisting of one Electrical Engineer-in-Chief, five Electrical Engineers, six Deputy Superintendents, and 34 subordinates is already in existence; but, as explained above, a part of its duties will in future be taken over by the engineering

staff, and the Technical Branch will consist only of subordinates working under the orders of the engineers. The Engineering Branch, on the other hand, will be, in effect, a new creation. It will be formed by selection from the present administrative and executive grades of the Telegraph Department, but will be considerably less numerous, since these officers at present deal with traffic as well as engineering work.

6. The proposed constitution of the Engineering and Technical Branches is described in detail in paragraph 15 of our late Director-General's letter, to which we beg to invite Your Lordship's attention. The total sanctioned strength of the superior staff of the Indian Telegraph Department, as sanctioned in Lord Morley's despatch No. 24 (Telegraph), dated the 3rd December 1909, consists of 96 officers exclusive of a Superintendent of Workshops and a Chief Storekeeper. Of these, six officers formed the headquarters staff, viz., the Director-General, two Directors for Traffic and Construction, respectively, and three Assistant Superintendents; and the remaining 90 officers were employed in the traffic and construction work of the Department or in the Technical Branch. There are in addition 78 Deputy Superintendents engaged in engineering and technical duties. It will be seen that the Director-General proposes that the staff for the engineering and technical branches, which will be relieved of all traffic duties, should be reduced to 111 inclusive of a Chief Engineer and his assistant and a personal assistant to the Director-General, but exclusive of the Superintendent of Telegraph Workshops and the Chief Storekeeper. We are of opinion that no further reduction can safely be made in this direction. Out of this total of 111 officers, the Director-General proposes that the "superior service" should consist of 46 appointments, which is less by four, approximately, than the number admissible for 28 administrative and executive appointments under the proportion adopted in the reorganisation of the Department in 1910. This small saving is obtained by dispensing with the usual leave reserve, which, the Director-General explains, is unnecessary in the Department owing to the fact that there are, below the superior service, a number of Deputy Superintendents performing functions precisely similar to those discharged by the junior members of the superior service, for whom these Deputy Superintendents will, as required, be appointed to officiate, without receiving acting promotion in rank—the total number of officers present on duty always being maintained at the sanctioned strength by the appointment, when necessary, of additional Deputy Superintendents in the lowest grade. The present sanctioned strength of the superior service being 96, the Director-General's proposals will involve a reduction, in this line, of 50 appointments. The questions of the pay and method of recruitment of the Engineering and Technical Branches will be referred to in a later paragraph.

7. Turning now to the subject of Telegraph traffic, we would invite a perusal of paragraphs 17–21 of the Director-General's letter, which explain in detail the constitution of the proposed superior Traffic Branch, to be organised to assist Postmasters-General in the control of telegraph traffic which they will take over from the hands of Telegraph Directors. It is proposed to give each of the eight Postmasters-General an Assistant of the same rank as a Deputy Postmaster-General in the sister Department. The most important telegraph offices, viz., those at Calcutta, Bombay, and Madras will be entrusted to the control of officers of the same rank, while the five offices next in importance, viz., Agra, Rangoon, Lahore, Karachi, and Delhi will be under the supervision of a class of officers to be created, corresponding, approximately, to Superintendents of Post Offices. The first four of the above offices are at present in charge of Telegraph Superintendents (who draw from Rs. 850 to Rs. 1,250 a month), and the last four are now under Deputy Superintendents in the existing Traffic Branch of the Telegraph Department (a class of officers in increments' grades rising from Rs. 250 to Rs. 500). The raising of the status of the officers henceforward to be in charge of these officers is due to the fact that, under the new scheme, the control of all town departmental offices is to be transferred to the officers in charge of the central telegraph offices. The remaining appointments in the new Traffic Branch will consist of three officers at the headquarters of the Director-General, 19 Assistants to the Chief Traffic officers in Postmasters-General's offices, and an Assistant to each of the officers in charge of the telegraph offices at Calcutta and Bombay.

The 19 officers referred to above will be constantly engaged in the inspection of subordinate offices, a task which will involve a large amount of touring; and the growing size and importance of the principal telegraph offices will make the work of the Superior Traffic Branch altogether more arduous nnd responsible than that of the staff at present employed in traffic work.

The new branch will be under Postmasters General, and the Director-General will be assisted in the control of the work of the branch by an officer whom Sir Charles Stewart-Wilson proposed to style "Deputy "Director-General of the Post Office of India, Traffic," but for whom we (agreeing with the present Director-General) prefer the designation "Deputy Director-"General of Telegraph Traffic," as indicating more precisely the nature of his duties in the Director-General's office.* This officer, who will replace the existing Director of Traffic, will be assisted at headquarters by two officers, who will be styled, respectively, "Assistant Director-General of Telegraph Traffic," and "Assistant to the Deputy Director-General of Telegraph Traffic." The result is a total of 40 appointments in the special or superior Traffic Branch, five of which are at present filled by Deputy Superintendents in the ordinary Traffic Branch (whose number will consequently be reduced from 56 to 51), and the final effect of the proposals regarding the three branches of engineering, technical and traffic work, is shown in the latter part of paragraph 20 of the Director-General's letter to be a net reduction of 28 appointments in the total sanctioned strength of the gazetted staff of the Telegraph Department.

Here also the scale of staff proposed does not provide for a reserve for leave and other contingencies, and acting appointments in the lowest grades of the Superior Traffic branch or of Deputy Superintendents will have to be made to maintain the total number of officers present on duty at the sanctioned strength. We have dwelt at some length on the constitution of the new Traffic Branch, in order to bring out as clearly as possible the considerations which have led to the proposal to introduce special conditions of pay and recruitment for this branch, to which we shall refer again in paragraph 13 below.

8. It will be seen that the Director-General proposes to have the following officers at headquarters to assist him in the control of the Telegraph Department: a Chief Engineer with his assistant, an Engineering Personal Assistant to the Director-General, a Deputy Director-General for Traffic with his assistant, and an Assistant Director-General for Traffic. These, combined with the Post Office headquarters staff (which consists of 2 Deputy Directors-General, 4 Assistant Directors-General, and 2 Personal Assistants) make a total of 15 officers at headquarters. We were at first disposed to regard this staff as somewhat excessive, but further consideration has led us to modify our opinion. The proposed strength of the headquarters staff is the same as at present, owing to the fact that it was found necessary early last year to increase the staff of superior telegraph officers in the Director-General's office by abolishing a division, and attaching the Superintendent of Telegraphs, thus set free to assist the Director of Traffic in place of the Assistant Superintendent provided in the reorganisation of 1910. Two Deputy Superintendents employed in the Director-General's office were also replaced early last year by a single Deputy Superintendent, holding a temporary appointment created by us, with the title

* Corresponding alterations will be made, where necessary, in the designations of the other Traffic officers specified in paragraph 23 of the Director-General's letter.

of Assistant Director of Traffic. When the amalgamation is introduced, the services of both these officers will still be required, since the fluctuating character of traffic work renders necessary a considerable amount of centralised supervision to arrange, in the interests of economy, for the due distribution of staff to meet local variations in the amount of traffic, and the proposals do not involve any increase in the number of officers at headquarters. The extra expense of the headquarters staff is accounted for partly by the high salary proposed for the Chief Engineer. It must, however, be remembered that this appointment will represent not only the post of Director of Construction on the present headquarters staff, but also the appointment of Director-General of Telegraphs, which it is now proposed to abolish. Moreover, fully half the work now done by the Electrical Engineer-in-Chief will in future be performed by the Chief Engineer, and if in comparing the cost of the present and the proposed headquarters staff, allowance is made for half the pay of the former office, the result is a small saving.

We realise that the control of the Post Office and the Telegraph Department, which are constantly in direct communication with corresponding administrations in different parts of the Empire and foreign countries, necessitates much centralisation of work. We recommend, therefore, the Director-General's proposals in this regard for Your Lordship's sanction, subject to our undertaking to examine the position afresh after two years' time, with a view to considering whether in the light of the experience which will have been gained, any reduction can be effected in the staff at headquarters.

9. The pay and allowances proposed for the new appointments are clearly set forth in paragraphs 26-36 of the Director-General's letter, and we consider his proposals to be suitable throughout and recommend them for Your Lordship's sanction. This is subject to the remark that some of the officers for whom Calcutta house allowances are proposed will probably have their headquarters eventually fixed at Delhi, and such officers will then cease to draw the allowances. It is also necessary to explain that the rates of pay proposed for Superintendents and Assistant Superintendents, Telegraph Engineering, and for Deputy Superintendents of Telegraph Engineering (*vide* paragraphs 30 and 31 of the Director-General's letter) are those sanctioned in Your Lordship's despatches No. 24-Tel., dated the 3rd December, 1909, and No. 10-Tel., dated the 3rd May 1912, respectively.

We have shown, in paragraph 7 above, that the duties and responsibilities which will devolve upon the second division of the new Traffic Branch are of an exceptional character, and we support the proposal to introduce a special time-scale of pay in their favour, the effect of which will be to give them an average salary of Rs. 458 per mensem, the average pay enjoyed by the ordinary Traffic Branch being Rs. 359 per mensem. The further reasons adduced by the Director-General in the latter part of paragraph 35 of his letter constitute an additional justification for the proposed time scale.

10. We attach to this letter a statement showing in tabular form the proposed organization of the Telegraph Department, the various branches being clearly distinguished from one another, and their designations and scales of pay specified. This conspectus will, we trust, make the general outline of the scheme more readily comprehensible.

11. It will be observed that, whereas there are at present in the Telegraph Department 11 appointments carrying a pay in excess of that of the executive grades (the maximum of which is Rs. 1,250 per mensem in the cases of the Imperial Service and Rs. 850 in the case of the Provincial Service), there will be only five such appointments for some time, and, ultimately, four when the new Deputy Director-Generalship is called up from the Traffic Branch. This would adversely affect the position of officers now in the service were some steps not taken to protect their interests. We are pledged by the declarations made in our Resolutions of 1910 and 1912, announcing the reorganisation of the Department and the improvement in its conditions of service, to guarantee to officers now in the Department a position and prospects after the amalgamation not worse than those which they have hitherto enjoyed. In fulfilment of this guarantee, we recommend that the scales of pay now attached to the eleven administrative appointments above referred to, be continued in force so long as there remain in the Department any officers who would, but for the amalgamation, have risen to enjoy them.

12. This proposal is, however, subject to an important restriction. It will be seen that, after taking into account the actual strength of the Department as compared with its sanctioned strength, and the retirements which will take place before the introduction of the scheme, and after providing for the distribution of the new appointments among the existing staff in the manner proposed in paragraph 43 of the Director-General's letter, there remains a surplus of fourteen officers for whom no appointments can suitably be provided in the Department after the introduction of the proposed scheme. Of the 14 surplus officers one, Mr. Elrington, has retired; a second, Mr. Streatfeild-James, retires in the ordinary course in April next; a third, Mr. Overton, is likely to retire at the end of his present leave; and a fourth officer will probably be required for employment in a State Railway telegraph appointment which is now under consideration. Ten officers must, therefore, be induced to retire under conditions which will not afford a ground for reasonable complaint. The Director-General in paragraph 46 of his letter proposes, with this object in view, to offer special pensions on conditions similar to those which were sanctioned, in the case of the Public Works Department in 1887, by Viscount Cross in his despatch No. 13-Tel., dated the 25th August 1887. To this proposal we would add the further recommendation that officers retiring on these special pensions should further be permitted to avail themselves of any leave that might be due to them. We make this recommendation because we consider it of the utmost importance that the inducements to retire should be effectual in the required number of cases.

The premature retirement of a large number of officers, who will be among the senior officers of the Department, would, however, give unduly accelerated promotion to the remaining officers unless some artificial bar were introduced to confine promotion to its normal course. The Director-General proposes, therefore, in paragraph 37 of his letter, to restrict the enjoyment, after amalgamation is effected, of the existing higher rates of pay by the imposition of a time-limit upon promotion to those rates, in the manner described in the table contained in the paragraph referred to. As the Director-General explains, the existing organisation of the Department is of too recent a date to admit of a correct calculation of the probable decrement rate and prospects of promotion; he has, therefore, taken the cases of a few officers now in the Department, the dates of whose promotion to higher grades can be forecasted with reasonable certainty, and has adopted the average rate thus ascertained in fixing the periods of service at which officiating and permanent promotion to the various grades may suitably be allowed, subject, as hitherto, to the operation of selection.

We have carefully considered alternative methods of protecting the interests of officers now in the Department, while guarding against undue advantages being obtained from enforced retirements, and have come to the conclusion that the device adopted by the Director-General is, in all the circumstances, the best practicable.

We would add that, while we do not wish to attach undue weight to actuarial calculations in such a matter, we have such calculations made in order to compare the normal flow of promotion with that assumed by the Director-General in his proposed time-limits, and the result is exhibited in the subjoined table.

APPENDIX I. *(continued).*

No. of Appointments.	Rate of Pay.	Conditions of Appointment			
		Permanent.		Officiating.	
		Normal.	As proposed by Director-General.	Normal.	As proposed by Director-General.
	Rs.				
1	2,250 Imperial -	Not less than 30 years' service.	Not less than 30 years' service.	Not less than 29 years' service.	Not less than 27 years' service.
	1,800 Provincial -				
2	2,000 Imperial -	Not less than 28 years' service.	Not less than 27 years' service.	Not less than 27 years' service.	Not less than 24 years' service.
	1,600 Provincial -				
3	1,750 Imperial -	Not less than 26 years' service.	Not less than 24 years' service.	Not less than 25 years' service.	Not less than 22 years' service.
	1,400 Provincial -				
4	1,500 Imperial -	Not less than 24 years' service.	Not less than 22 years' service.	Not less than 23 years' service.	Not less than 20 years' service.
	1,200 Provincial -				

Allowing for the operation of selection, we think that the comparison justifies the Director-General's proposals.

There is one further point of which mention must be made in this connection. The time-limits above described have been imposed in restraint of promotion, which would otherwise be unduly accelerated by the premature retirements induced by the offer of special pensions. This cause will cease to operate after a limited number of years, and before the disappearance of all the officers for whose benefit the existing higher rates of pay are proposed to be continued. We consider, however, that the time-limits should remain in force until the end of the period for which the higher rates of pay continue. Considering the liberal and indeed quite exceptional manner in which it is proposed to protect vested interests, and the serious extent to which the prospective economies to be attained by the scheme of amalgamation will be postponed by the continuance of these special rates of pay, we do not consider it unduly severe to maintain a check upon excessively rapid promotion in individual cases.

13. We would next refer briefly to the question of recruitment. This subject has been fully dealt with in paragraph 38 of the Director-General's letter, and we support his proposals that the proportion of officers to be recruited in England for the Engineering Branch should be reduced from five-eighths to one-half, the remaining half being obtained, in equal proportions, by direct recruitment in this country, and by promotions from subordinate ranks. This matter will, however, shortly come under the consideration of the Public Services Commission, and we desire to add that our recommendations in this respect are provisional, and subject to the result of the enquiries made by the Royal Commission.

14. In our letter No. 300 (Financial), dated the 17th October 1912, while proposing the inclusion of a Royal Engineer Officer in the superior service of the Telegraph Department for the charge of wireless stations in India, we explained that that proposal did not involve any extra expenditure in the Department as the superior staff was then below its sanctioned strength. Under the proposed reorganisation, however, this appointment will constitute a net addition to the strength of the superior engineering establishment described in paragraph 6 above, and we take this opportunity of requesting sanction to the continuance of the appointment as a part of that establishment. The extra expenditure involved will be the amount of the pay to which the officer holding the appointment in question will be entitled according to the time-scale referred to in paragraph 2 of our despatch No. 300 Salaries, &c., dated the 17th October 1912.

15. In paragraphs 47 and 48 of his letter the Director-General has proposed a scale of enhanced pensions attainable after a certain term of service in prescribed appointments. We support his proposals in this respect. The corresponding pensions now in force were sanctioned in Your Lordship's Despatch No. 12-Tel., dated the 26th August 1910.

16. There are certain minor matters dealt with in the Director-General's letter, such as the question of his financial powers, and the clerical and menial establishments required after the introduction of the scheme, to which we have not yet been able to devote full consideration, and, in referring to these matters, we would ask that we may be permitted to deal with separately, so far as they lie within our powers, after Your Lordship's orders on the general scheme have been received.

17. The amalgamation scheme, which we have the honour to lay before Your Lordship in this letter, was, in its main features, foreshadowed in paragraph 2 of our Commerce and Industry Department letter No. 39, dated the 13th July 1911. The acutal combination of postal and telegraph functions has not been carried lower down the scale than Postmasters-General, and it would be more correct to describe the scheme as one of redistribution of staff and duties than as one of actual amalgamation. A considerable degree of fusion has already taken place, inasmuch as nearly all combined offices (which represent the larger, and constantly increasing, proportion of telegraph offices throughout the country) are under the control of postal officials. We do not anticipate that any further fusion can take place for many years to come. The scheme exhibits in a striking manner the fundamental distinction between engineering and traffic work, and even the differences between postal and telegraph traffic are so pronounced that there is no prospect at present of the two sets of duties being performed by a common establishment. These considerations do not, however, in our opinion, lessen the advantages which we confidently expect will ensue upon the introduction of the scheme. The experimental amalgamation, introduced last year in the Bombay and Central Circles (upon the lines of which the present proposals proceed), has been favourably received by the public, and the officers engaged in the experiment have testified to its beneficial effects upon both engineering and traffic. Each of these branches of work receives under the new system its due share of attention. The existence of a staff specially devoted to engineering encourages the introduction and application of scientific methods and inventions. We have no doubt, in short, that the administration of the Telegraph Department will become more efficient, and the public convenience

be thus benefited, by the introduction of the proposed scheme.

Financially, as well as administratively, the proposed distribution of duties will tend to economy, and the Director-General in paragraph 58 of his letter estimates the ultimate savings at not less than three and a half lakhs a year, though these anticipated savings will be postponed to a considerable extent by the measures (which we have described in paragraph 12 above) proposed to be taken for the protection of existing interests. In this connection, it is necessary to observe that we have not adopted the figure for the average pay of an Imperial service officer as calculated at the end of paragraph 58 of the Director-General's letter, but have adhered to that shown in Appendix IV, Statement A., to the despatch from Lord Minto's Government, No. 153-Salaries, dated the 1st July 1909. The alteration does not, however, affect the final estimate of the cost of the proposals.

The effect of the proposed scheme upon the personnel of the Department has received our anxious consideration. One measure for the protection of existing interests has been described in paragraph 12 above. Another measure, having the same object, is the proposal (contained in paragraph 31 of the Director-General's letter) to effect the necessary reduction of Deputy Superintendents General, by making it in the lowest grade. The Director-General has expressed his belief that the amalgamation will not excite serious opposition or discontent among the members of either Department, providing that existing interests are adequately protected, and we are prepared to accept this view, though we cannot hope that a scheme of this magnitude can be introduced without giving rise to some individual grievances.

With these remarks we have the honour to commend the scheme for Your Lordship's sanction. We request the favour of early orders, as we are anxious to introduce the scheme with effect from the 1st of April 1914, if it is possible to give the Director-General before that date the necessary time for effecting the preliminary arrangements referred to in paragraph 60 of his letter. A further reason why in our opinion delay beyond the date mentioned above is undesirable, is that recruitment has been stopped pending the receipt of Your Lordship's orders on these proposals.

We have the honour to be,
My Lord Marquess,
Your Lordship's most obedient,
humble Servants,

(Signed) R. W. CARLYLE.

ENCLOSURE IN ABOVE.

Letter from the Hon'ble SIR CHARLES STEWART WILSON, K.C.I.E., Director-General of Posts and Telegraphs (No. 464-S.G., Simla, the 13th November 1912) To the SECRETARY to the GOVERNMENT of INDIA, Department of Commerce and Industry.

SIR,—I have the honour to refer to the correspondence ending with Mr. Ley's letter No. 4393-101, dated the 7th June 1912, in which the Government of India sanctioned the experimental amalgamation of the Post Office and the Telegraph Department in the Bombay and Central Circles from the 1st July 1912. In accordance with the instructions contained in paragraph 4 of that letter full details of the experimental arrangements were communicated to the Bombay and Karachi Chambers of Commerce, the Bombay Millowners' Association, the Indian Merchants' Chamber and Bureau and the Bombay Trades Association with a request that I might be favoured not later than the end of October 1912 with the opinion formed by their members regarding the experiment; and the general public were also invited, by means of a Press Communiqué and notices exhibited at all telegraph offices and post offices in the two circles, to communicate before the end of October their views on the success of the experiment. I presume that the remarks of the Government of Bombay and the Chief Commissioner of the Central Provinces on the subject have been communicated direct to the Government of India.

2. **General opinion regarding experimental amalgamation in Bombay and Central Circles.**—I submit for the information of the Government of India copies of the letters received from the public bodies specially addressed (Annexure I)* and also copies of the opinions expressed by the Postmasters-General and the Superintending Engineer, Telegraphs, Bombay and Central Circles, and by the Accountant-General, Post Office and Telegraphs (Annexure II).* from which it would appear that the general opinion in the two circles affected by the experiment is in favour of the scheme of amalgamation. No letters have been received from the general public in response to the invitation mentioned above and it may be assumed, therefore, that the experiment in amalgamation has caused no inconvenience to any one. The references to the question of amalgamating the two departments that have appeared in the press since the experiment was undertaken have been uniformly favourable.

The progress of the experiment has been most carefully watched departmentally and has been freely discussed with all the senior officers and many of the juniors and subordinates of both the departments in my charge. The advantages to be gained from separating the traffic from the engineering work of the Telegraph Department are freely admitted by practically all the officers of that department and it is generally agreed that the separation can best be affected by the application to the whole of India as a permanent measure of the arrangements that have been in force experimentally in the Bombay and Central Circles since the 1st July last. The feeling of opposition to amalgamation on the part of the telegraph staff which, as the Government of India are aware, was in existence at the time of the publication of the Resolution in the Department of Commerce and Industry, No. 830-833, dated the 24th January 1912, arose from the suspicion that this measure might result in a wholesale reduction of establishment; but, so far as I have been able to ascertain, there would now be no feeling on the part of the officers or the subordinate staff of either the Telegraph Department or the Post Office against the permanent amalgamation of the two departments, provided that the interests and prospects of officers of all grades now serving in the departments are adequately protected.

3. **Effect of combination of the Post Office and the Telegraph Department under a single Director-General.**—Amalgamation on the basis of separating the engineering and traffic branches, if a suitable scheme could be evolved, has already been recognised as desirable by the Government of India, and my experience in the past few months has satisfied me of the correctness of this view. The Government of India should not, in my opinion, hesitate to abandon the existing administrative organisation of the Telegraph Department which is unnecessarily expensive. The Circle Directors have not been required to perform sufficient work of an important nature, on account of the difficulty of decentralising traffic and the failure to delegate powers when possible. This is due to the tendency to centralisation which has long been a characteristic of the Telegraph Department, and the result is that the Directors have not in fact occupied a position corresponding in responsibility to that of a Postmaster-General as was intended, and there has been much unnecessary correspondence between the two departments. The combination of the Post Office and the Telegraph Department under a single Director-General has already resulted in much greater co-operation between the officers of the two departments, in considerable economies under various heads and in a marked reduction of correspondence and clerical labour owing to the various directions in which work has been simplified.

* Not reprinted.

APPENDIX I. (*continued*).

In my opinion, therefore, the success of the experiment in the Bombay and Central Circles and the views expressed by the public bodies consulted amply demonstrate that amalgamation in itself is not only desirable but is obviously the proper step to take in the interests both of efficiency and economy. It will undoubtedly lead to greater telegraph and telephone facilities to the public and will also result in an improved telegraph service owing to the closer control which it will be possible to exercise over the traffic arrangements of the department.

4. **General features and advantages of scheme of amalgamation proposed.** — Under the scheme of amalgamation now proposed, which is on the lines suggested by me in 1905 and follows closely the systems in force in the United Kingdon, Holland, Belgium and Italy, both the engineering and the traffic officers of the future will be solely employed on duties for which they are recruited and specially trained, and the dual control of combined offices which now exists will cease.

The inspection of combined offices and the disposal of correspondence connected with the opening, maintenance and closing of such offices will be transferred to Superintendents of post offices, who are now in a position, with the help of a few subordinates having a knowledge of instruments, to supervise and control the entire work of these offices after they are fitted up. It will thus be possible to effect large economies in respect of supervision and inspection and at the same time to provide not only a suitable staff of specially selected officers solely for the supervision and control of the operating establishment of the more important telegraph offices and of the traffic dealt with in those offices, but also an adequate staff of engineers who will be free to devote the whole of their time and energy to telegraph engineering work and to the proper maintenance and efficient working on the lines of the department.

The existing system under which officers and subordinates trained for telegraph engineering are required to spend half their time on traffic duties, which many of them dislike, is far from satisfactory and has led to some laxity of supervision over the work of the line staff, with the result that the maintenance of lines has been somewhat neglected. I am proposing to provide, for engineering work only, a liberal staff of upper subordinates of the rank of Deputy Superintendent, and, with this provision, maintenance work and petty reconstructions will be much more closely supervised than at present. I am confident, therefore, that under the new system engineering as well as traffic work will be performed more efficiently than now.

Another outstanding feature of the scheme is that competent subordinates will, for the first time, be afforded prospects of advancement to well-paid appointments, both in the engineering and in the traffic branches, with the result, we may hope, that the recruitment of telegraphists, which at present is by no means satisfactory, will be greatly stimulated and improved.

Finally, as shown in paragraph 58 of this report, the scheme will result in a large ultimate saving to Government in salaries of staff. The saving shown in that paragraph is likely to be exceeded, as it is anticipated that closer control will result in further savings on stores, stationery and printing as well as on staff and travelling allowances.

5. **Points of difference from the experimental arrangements in the Bombay and Central Circles.** —The scheme has been tested for some months now in the course of the experimental arrangements sanctioned for the Bombay and Central Circles, and the only point in which it is proposed to depart materially from those arrangements is in respect of the transfer to the proposed Engineering Branch of a portion of the work and duties of the superior staff of the present Technical Branch. This transfer was, however, all along intended. It was actually made experimentally in these two circles from the 1st October, and the experience gained since that time shows that the redistribution works well. In my opinion, and in the opinion of the senior officers of the Telegraph Department, including the Electrical Engineer-in-Chief himself, it would be extremely wasteful under the altered conditions to provide a special touring staff of electrical engineers to supervise the maintenance of dynamos and batteries, the adjustment of instruments and apparatus, the provision and maintenance of electric lights and fans, the installation and maintenance of telephones, &c., when such work can be done by the ordinary engineering staff now recruited and trained for this very class of work. Even in the case of the smaller wireless telegraph stations the ordinary engineering staff is capable of supervising their erection, maintenance and working and special assistance would usually be necessary only in the case of the establishment of new high-power stations. When the engineers are relieved entirely of traffic duties, there is no reason why they should not undertake all the work ordinarily falling within the scope of electrical engineering, and they are anxious that these classes of work should be allotted to them. I have accordingly provided in my proposals for the abolition of the appointment of Electrical Engineer-in-Chief, the reduction of the staff of electrical engineers from five to three, the distribution among the divisions of most of the subordinate staff of the Technical Branch, and the transfer to the divisional engineers and their assistants of all the duties of the present Technical Branch, except research work, the instruction of candidates for appointments in which technical knowledge is required, the conduct of technical examinations, and the testing of instruments at the store depôt at Alipore.

Engineering officers and upper subordinates will be encouraged to avail themselves fully of study leave, and so keep themselves abreast of the progress in electrical science.

I.—STAFF AND DUTIES UNDER THE PROPOSED SCHEME.

(a) Engineering.

6. **Administrative Staff in Circles.**—It has already been indicated in the preceding paragraphs that the fundamental principles of the scheme of amalgamation advocated by me are the separation of the engineering and traffic work of the Telegraph Department, the transfer of the latter to the control of Postmasters-General, and the recruitment of engineers for engineering work only, and of traffic officers for traffic work only. It is generally agreed throughout the Telegraph Department that, roughly speaking, traffic work at present occupies rather more than one half of the time and energy of the administrative and executive officers of the department, and it follows that if this work is handed over to Postmasters-General the present number of administrative appointments in the Telegraph Department must be reduced considerably. Excluding the Directors of Construction and Traffic and the Electrical Engineer-in-Chief, whose duties will be dealt with later, the circle scheme provides eight officers of the rank of Director of Telegraphs, each of whom is directly subordinate to the Director-General, for the administration of the Telegraph Department, in respect of both engineering and traffic, in an area co-terminous with a postal circle.

After careful consideration I am of opinion that the administrative control of the purely engineering work of the Telegraph Department should comprise the following four charges :—

I. The Bombay Circle (less the late Karachi Division), and the Central and Madras Circles.

II. The Punjab Circle (with the addition of the late Karachi Telegraph Division) and the United Provinces Circle.

III. The Bengal and Eastern Bengal and Assam Circles (the Provinces of Bengal and Bihar and Orissa and the Administration of Assam).

IV. The Burma Circle.

7. The first three of these charges must, I consider, be placed under officers of the standing of the present Circle Directors, and I am satisfied that their time

will be fully occupied. The officers selected will control the entire engineering staff within the limits of their extensive charges, and be responsible not only for the design, construction and maintenance of telegraph and telephone lines, but also for the first fitting of telegraph offices, the fitting up of telephone exchanges, the erection and maintenance of power plant, and all the other circle work which at present devolves on the Electrical Engineer-in-Chief, while they will exercise in respect of these duties all the powers which have been delegated to Circle Directors. The responsibilities and duties of these appointments will therefore be of an onerous nature, and it is necessary that they should be in the hands of senior and experienced officers. It would not not be wise to centralise control of telegraph engineering work at the headquarters of the Director-General, nor could it be placed in the hands of Postmasters-General having no engineering training; but, even if this were not the case, it is essential, in my opinion, that this branch of the amalgamated department shall be so constituted as to provide within itself a sufficiently attractive career for officers appointed to it, and this would not be possible unless engineering work were decentralised in the manner outlined here.

8. In the case of the Burma Circle, however, I propose that, for the present, the local administrative control of telegraph engineering work should be in the hands of the Postmaster-General. This circle cannot conveniently be linked for engineering purposes with any of the other provinces, its postal and telegraph work is light, and can all be undertaken by one officer with engineering knowledge and administrative ability, while the engineering duties alone would not justify the employment of an administrative engineering officer. Again, the conditions prevailing in Burma are such that special treatment under the scheme of amalgamation is demanded in another respect. Over 66 per cent. of the telegraph lines lie away from railways, and travelling along such lines is extremely difficult. At the same time these lines are of considerable importance, and must be carefully inspected at regular intervals by the engineering staff. The number of engineering officers of executive rank provided for Burma is therefore proportionately larger than in the other circles, but in the case of this circle I am proposing (*vide* paragraph 9) that these officers should give some assistance in traffic work. As I shall show elsewhere in this letter it will be possible for some years to come to provide a telegraph engineer as Postmaster-General, Burma, and, by the time this is no longer possible, Burma and Assam may be linked by railway, and a suitable redistribution of the engineering administrative charges can then be made. I have, therefore, thought it unnecessary to provide a separate administrative engineer for Burma after the appointment of Postmaster-General there ceases to be held by a telegraph officer.

9. **Executive Staff and Assistants.** — Directly subordinate to the engineering administrative officers there must be a sufficient number of executive officers to perform, in respect of telegraph engineering work, the functions now vested in Divisional Superintendents. The question of the number of officers required for this purpose has been minutely discussed with each of the present Circle Directors, and, after the most careful consideration of their views, I am of opinion that, to secure efficient supervision and control, there should be 20 charges, in each of which the engineering work should be under the control of an officer of the same standing, and with the same powers as a Divisional Superintendent of Telegraphs under the present system of administration, assisted by a sufficient staff of junior officers. The extent of each charge is shown in the map appended to this letter and the number of attached officers to be provided for each division would be approximately as follows:—

I.—BOMBAY, CENTRAL AND MADRAS CIRCLE.

(*a*) Late Bombay Division and greater portion of late Belgaum Division—Three attached officers, *i.e.*, Assistant Superintendents and Deputy Superintendents, General.

(*b*) Late Ahmedabad Division with small portion of the late Karachi Division and greater portion of late Ajmere Division—Three attached officers.

(*c*) Late Nagpur and Jubbulpore Divisions—Two attached officers.

(*d*) Trichinopoly and Calicut Divisions—Two attached officers.

(*e*) Bangalore Division with portions of Madras Division and late Belgaum Division—Two attached officers.

(*f*) Remainder of Madras Division with whole of Vizagapatam Division—Three attached officers.

II.—PUNJAB AND UNITED PROVINCES CIRCLE.

(*a*) Greater part of late Karachi Division and present Quetta Division—Three attached officers.

(*b*) Amballa Division with portions of Lahore and Bareilly Division—Three attached officers.

(*c*) Remainder of present Punjab Circle—Four attached officers.

(*d*) Remainder of Bareilly Division, with greater portions of Lucknow and Agra Divisions—Three attached officers.

(*e*) Allahabad Division with remainder of Lucknow and Agra Divisions—Two attached officers.

III.—BENGAL AND EASTERN BENGAL AND ASSAM CIRCLE.

(*a*) Greater portion of Calcutta Division with small portion of Dacca Division—Three attached officers.

(*b*) Cuttack Division with greater portion of Bankipore Division and remainder of Calcutta Division—Three attached officers.

(*c*) Darjeeling Division with portion of Bankipore Division—Three attached officers.

(*d*) Remainder of Dacca Division and portion of Chittagong Division—Two attached officers.

(*e*) Shillong Division and remainder of Chittagong Division (Assam Administration) — Three attached officers.

IV.—BURMA CIRCLE.

(*a*) Portion of Rangoon Division and greater portion of Moulmein Division—Two attached officers.

(*b*) Akyab Division and greater portion of remainder of European Division — Three attached officers.

(*c*) Greater portion of Maymyo Division and remainder of Moulmein Division—Two attached officers.

(*d*) Sagaing Division and remainder of Maymyo Division—Three attached officers.

The officers holding charge of these divisions will occupy, as regards engineering and technical work, exactly the same position as that now held by Divisional Superintendents of Telegraphs in respect of engineering and traffic work. In the case of Burma they will, in addition to their engineering duties, continue to be responsible, as already explained, for some of the traffic work which in other circles is to be separated entirely from engineering. This combination of duties will extend to the inspection of all departmental telegraph offices in that province, except Rangoon (with its local departmental offices), Mandalay, Moulmein and Bassein, and to the submission to the Traffic Branch of the Postmaster-General's Office of the inspection reports of these offices. It would have been necessary in any case, as already explained in paragraph 8, to provide a proportionately larger number of engineering divisional charges in Burma than in other circles, and the arrangement of giving divisional engineers a certain amount of traffic work will be economical, for the addition of this work to the duties of these officers will not increase their numbers nor necessitate any special training, while it will save at least one appointment in the superior Traffic Branch and will avoid a great deal of expenditure and waste of time in travelling. The Burma circle is peculiar in regard to the number of isolated offices which, though important, have but little traffic, and the long distances to be covered would render the inspection by separate traffic officers alone of even the more important telegraph offices a matter of con-

siderable difficulty and expense. The retention of as large a number of divisional charges as four in a circle in which there are under the present system only five divisional superintendents is, therefore, in my opinion fully justified.

10. **Administrative Staff at the Headquarters of the Director-General.**—There now remains for consideration, so far as the Engineering Branch is concerned, the question of the staff required to assist the Director-General at headquarters and to fill the various miscellaneous appointments outside the ordinary divisional cadre. At headquarters I propose that there should be a senior engineer corresponding with the present Director of Construction, who, as head of the Engineering Branch, will hold the most highly-paid appointment in the branch. This officer will be the official adviser of the Director-General of Posts and Telegraphs on all engineering and technical matters and will be responsible under him for the efficient execution and maintenance of all engineering works; for preparing the specifications for, and carrying out mechanical and electrical tests of, all material and stores in connection with which such tests are required; for the control of all expenditure connected with engineering works; and for inspections which will include investigations regarding the execution of works, maintenance of lines, the control of stores, the operations of the workshop and the keeping up of records. The Superintendent of Workshops, who will, as at present, be recruited from outside the ranks of the Telegraph Department, will be directly under his orders.

11. The head of the Engineering Branch, or, as I shall propose later on in this letter to term him, the Chief Engineer, Telegraphs, will require the help of one engineer officer as assistant, and I am of opinion that this officer should be of equal rank with the executive officers in charge of engineering divisions. The Chief Engineer will be frequently absent from headquarters on tour, and it is important that his assistant should be competent to relieve him at all times of the duty of dealing with the less important references on engineering questions. The tenure of the appointment of this assistant must, I consider, be limited to three years, and it would be extremely difficult to find an officer of lower rank than a Superintendent who would possess sufficient experience to be of real help to the Chief Engineer, and at the same time be sufficiently junior to render it possible to retain his services as assistant to the Chief Engineer for any appreciable time without injuring his prospects of promotion to divisional rank. One more telegraph engineer will be required at headquarters as Personal Assistant to the Director-General of Posts and Telegraphs, and, for the reasons stated in my letter No. 147*s*—G, dated the 29th May 1912, I recommend that this officer also should be of equal rank with the officers in charge of divisions. The tenure of this appointment also will be limited to three years as at present.

12. **Technical Staff.**—The other superior officers required for the Engineering Branch are those whose duties will include the research and instructional work now performed by the Electrical Engineer-in-Chief and the officers of the Technical Branch. As already stated, I do not propose the abolition of this branch, but merely the allocation to divisions of the Deputy Superintendents and other subordinates now employed on technical duties in the various telegraph offices, and the transfer to the executive telegraph engineers of a great part of the work of the electrical engineers of the present Technical Branch. The duties of the Deputy Superintendents and other subordinates of the Technical Branch now employed directly under the Electrical Engineer-in-Chief at Alipore would remain unchanged. If this transfer of duties is effected, it will be necessary to provide only a sufficient number of technical engineers to assist and advise the Director-General and the Chief Engineer in special technical matters, to carry on research work and test instruments at the store yard at Alipore, to conduct classes for instruction in technical matters and to hold technical examinations. For these purposes I consider that the services of three officers, of whom two should be of the rank of Superintendent of Telegraphs, will be required for six months, while two will be necessary for the remainder of the year. Thus for half the year one of these three officers will be at the disposal of the Director-General for employment on specially important works, such as the fitting of large telephone or telegraph offices, which the local officers could not be expected to undertake. In view of the large amount of instructional work which will devolve upon these officers, especially during the summer months, I recommend that they should be given the assistance of an additional technical Deputy Superintendent, the sanctioned establishment of Deputy Superintendents in the Technical Branch being increased by one appointment for this purpose, making the total strength of Deputy Superintendents and subordinates of lower rank in that branch seven and 34, respectively. Of the seven Deputy Superintendents two will be required at the headquarters of the technical engineers at Alipore, one each at Calcutta, Bombay, Madras and Lahore under the orders of the administrative engineers and one at Rangoon under the orders of the Postmaster-General, Burma. The sanctioned establishment of 34 subordinates is just sufficient to meet existing requirements and will remain unaltered.

13. **Duties of Technical Staff.**—The actual duties of the three technical engineers, assisted by two Deputy Superintendents and one subordinate of the Technical Branch, will be—

(*a*) *Instruction.*—Under this head the technical engineers will be responsible, under the Chief Engineer, for the instruction of classes for candidates for the appointments of Deputy Superintendent in the Engineering Branch and of technical telegraphist. The course prescribed for these classes will ordinarily extend to about six months and will include instruction in repeaters, Wheatstone and Baudot apparatus, oil engines, accumulators, electric lights and fans, telephones, cable testing, wireless telegraphy apparatus, elementary mathematics, electricity and magnetism. These officers will also be required to arrange for the instruction of training class instructors, telephone inspectors, and the line staff required for telephone work, as well as of newly-recruited superior officers and of any other officials, including traffic Deputy Superintendents, to whom it may be considered desirable to afford opportunities for acquiring technical knowledge.

(*b*) *Testing.*—The technical engineers will be in charge of the instrument testing room at Alipore and will be required to carry out all the testing and designing work now performed by the present Technical Branch under the Electrical Engineer-in-Chief.

14. These duties together with the office work connected with the staff serving permanently or temporarily under their orders, will ordinarily occupy about half the time of the technical engineers and the remainder of their working day will be devoted to research and the study of electric science. This will be connected principally with wireless telegraphy and telephones, but both the research work and the instruction will be practical and suited to the conditions of India. I assume that the services of Captain Evans or some other officer of the Royal Engineers will continue to remain at the disposal of the Director-General of Posts and Telegraphs so long as required.

15. **Total staff of Engineering Branch.**—The total staff proposed for the Engineering Branch in the foregoing paragraphs is—

Administrative	1 Chief Engineer 3 Circle Engineers
Executive	20 Divisional Engineers 2 Technical Engineers 1 Personal Assistant to the Director-General 1 Assistant to the Chief Engineer
Assistant and Deputy Superintendents' appointments.	54 Attached officers, *i.e.*, Assistant and Deputy Superintendents 1 Assistant Engineer, Technical

a total of 83 officers. To this number have to be added four Deputy Superintendents required as Personal

Assistants to the three Circle Engineers and as Engineering Personal Assistant to the Postmaster-General, Burma, and six Deputy Superintendents for employment in the four telegraph store depôts at Calcutta, Madras, Bombay, and Rangoon. I consider it essential to provide also a special staff of 11 Deputy Superintendents, of whom the services of three can be placed at the disposal of each of the Circle Engineers and of two at the disposal of the Postmaster-General, Burma, for employment on special works. During the past four years it has been necessary to allot on an average about 14 officers annually for such works, and, although under the amalgamation scheme the ordinary divisional staff of engineer officers will have more time to undertake special works in addition to their usual duties than hitherto, there will generally be a number of projects for which the services of special additional officers will be necessary, and it is desirable that there should be officers in each engineering circle available for this purpose without dislocating the ordinary engineering staff of divisions. These Deputy Superintendents will also, when necessary, take the place of divisional officers whom it may be found necessary to employ on special works, and when not employed either in this capacity or directly on special works, they will be utilised in taking the place of officers on leave. This increases the number of Assistant and Deputy Superintendents from 55 to 76 and brings the total number of officers required for the proposed Engineering Branch to 104, excluding the additional Deputy Superintendent for the Technical Branch. Of this total 28 will hold administrative and executive appointments and, calculating on the proportion of 100 : 178 adopted in the reorganisation of the Public Works Department in 1908 and that of the Telegraph Department in 1910, the strength of the superior service of the Engineering Branch should be $28 \times 1 \cdot 78 = 49 \cdot 84$, that is, with four administrative appointments and 24 executive appointments, there should be a staff of 22 assistants of the superior service. The proportion used, however, provides for a leave reserve of about 18 officers for every 100 executive appointments proposed, but such a reserve is not required in the Telegraph Department and I am of opinion it will be sufficient to provide 18 junior appointments against 28 administrative and executive appointments, making a total establishment of 46 in the superior engineering service.

15. **Proportion of Assistant Superintendents.**—From the application of the Government of India Life and Service tables shown in the statement attached to this letter (Annexure III., Statement A) it would appear that a staff of 23 Imperial Service officers and 23 Provincial Service officers should provide 28 officers with more than 10 years' service, and the present time scales of pay, which I shall propose to continue for engineers, were based on the assumption that executive rank would usually be attained in the 11th year of service. The statement also shows that if, as will probably be the case, the officers appointed direct to the Provincial Service in future are about 21 or 22 years of age, there should be, theoretically, a sufficient number of officers with six years' service and upwards to take the place of the seven administrative and executive officers, who may be expected to be absent on leave at the same time, and the remainder, consisting of 11 officers with less than six years' service, is in my opinion a sufficient number to have in training. According to the statement already referred to a total strength of 46 engineer officers would not ordinarily suffice to provide officers with the proper amount of service to take the place of those unfit for promotion, but in a small service of 46 it should be possible as a general rule to weed out unsuitable officers long before they reach their seventh year of service. Moreover, as I shall explain more fully later in this letter. I propose that one-fourth of the vacancies in the superior engineer establishment should in future be filled by the promotion of qualified subordinates. This arrangement will tend to a slight preponderance of officers of six years' service and upwards over the figures given under the Life and Service tables owing to the fact that promoted subordinates would frequently have to be brought on to the time-scale of pay of the superior service at a point very near the pay of the sixth year of service. This consideration in itself renders it desirable to fix the total strength of Assistant Superintendents as low as possible, in order to prevent any risk of a serious block in the promotion of young officers appointed direct to the superior establishment.

16. **Proportion of Deputy Superintendents.**—The remaining fifty-eight appointments required in the Engineering Branch will be filled by Deputy Superintendents, General, of whom there are at present seventy-two sanctioned. The balance of fourteen Deputy Superintendents-General will be provided for in a manner which will be described in paragraph 45. As the total number of appointments is fixed on actual requirements, it follows that, when one of the forty-six superior officers proceeds on leave, it will be necessary to appoint a subordinate to officiate as additional Deputy Superintendent during his absence; that is, the total number of officers present on duty will always be maintained at sanctioned strength by the appointment, when necessary, of additional Deputy Superindents, but Deputy Superintendents will not be appointed to officiate as Assistant Superintendents.

(*b*) *Traffic.*

17. **Staff of superior traffic officers to assist Postmasters-General.**—In the foregoing paragraphs I have dealt with the question of the staff required for the control and supervision of the engineering and technical work only. The traffic work of the department, under the recommendation made in this letter, will pass to the control of Postmasters-General, and it has now to be considered what additional staff should be provided to assist Postmasters-General in the disposal of this important addition to their duties. By traffic work is meant the disposal of all questions connected with the establishment of Government telegraph offices, whether departmental or combined, the supervision and control of all telegraph work performed inside such offices, except the maintenance of wireless and other special telegraph apparatus (such as Baudot, Wheatstone, repeaters, &c.), and the testing of lines in offices in which Technical Branch men are permanently employed; in short, all work which does not come under engineering. The question of the additional staff required when all the traffic work at present performed by Circle Directors and Divisional Superintendents is transferred to the Post Office has been discussed in detail with Postmaster-General and Director of Telegraphs and the unanimous opinion, in which I agree, is that each circle should be given the services of one fairly senior officer of about the same standing as a Deputy Postmaster-General with the following staff of assistants:—

Bombay Circle - - -	Three.
Central Circle - - -	Two.
Madras Circle - - -	Three.
Punjab Circle - - -	Three.
United Provinces Circle - -	Two.
Bengal Circle - - -	Three.
Eastern Bengal Circle and Assam	Two.
Burma Circle - - -	One.

These proposals are based on the experience of the actual work which has been gained during the progress of the experimental amalgamation in the Bombay and Central Circles and I am convinced that they represent the smallest additions to the staffs of Postmasters-General compatible with efficient working. As a matter of fact the Postmasters-General of both these circles at the beginning of the experiment were of opinion that a considerably larger staff of assistants would be needed, but, when they realised that it would be unnecessary for the officers of this branch to inspect the smaller combined offices, they voluntarily reduced their requirements to the number proposed which they have in practice found sufficient. The question of the exact duties to be performed by each officer must be left to the respective Postmasters-General to decide, but it is intended that the officers allotted to

each circle for the superior Traffic Branch in the offices of Postmasters-General will ordinarily divide their time about equally on inspection and office duties, for this branch will also deal with the work connected with the telegraph side of combined post and telegraph offices now performed by the existing staff of Postmasters-General. The services of Inspecting telegraph masters and telegraphists and of Superintendents of post offices will be utilised in the inspection of the less important combined offices. It will be observed that the Deputy Postmaster-General, Traffic (Traffic Manager) in the Burma Circle will be given only one assistant, the reason being, as explained in paragraph 9, that the telegraph engineering officers in this circle will deal with a certain amount of the traffic work.

18. **Staff of Superior Traffic Branch Officers at the Headquarters of the Director-General.**—As head of the Traffic Branch at the headquarters of the Director-General of Posts and Telegraphs, I propose that there should be a senior officer whose duties will correspond with those now performed by the Director of Traffic. This officer will be designated Deputy Director-General of the Post Office of India, Traffic. He will exercise under the Director-General the entire control of telegraph traffic and the staff employed in telegraph offices, and, although his duties will not be so responsible as those of the Chief Engineer, they will be such as to demand the services of a thoroughly efficient and experienced officer. It is desirable that the officer holding the highest appointment in the superior Traffic Branch should be of practically equal rank with the Postmasters-General, whose work, so far as telegraph traffic is concerned, he will to a certain extent control.

Every endeavour has been, and will continue to be, made by me to reduce the number of references on telegraph traffic and establishment questions, but this branch of my office is still very heavily worked and must remain so. As it will also be necessary that the Deputy Director-General of the Post Office, Traffic, should spend a considerable portion of his time on tour, I consider that he should be given the services of two assistants as at present. One of these should be of about the same standing as an Assistant Director-General of the Post Office, and would take the place of the Superintendent of Telegraphs at present attached to my office to assist the Director of Traffic; the second assistant would be a more junior officer holding an appointment corresponding to that of Assistant Director of Traffic recently sanctioned by the Government of India as a temporary measure. I am satisfied that the work which must necessarily come to this branch of my office will occupy the time of these officers very fully.

19. **Miscellaneous appointments in superior Traffic Branch.**—In addition to the officers at the headquarters of the Director-General and of Postmasters-General it is necessary to provide in the proposed superior Traffic Branch for officers to take the place of the Superintendents of Telegraphs in charge of the Calcutta, Bombay, Madras and Agra central telegraph offices, and the Assistant Superintendents in the Calcutta and Bombay offices. An important feature of the scheme of amalgamation is the transfer of the control of all town departmental telegraph offices to the officers in charge of the central telegraph offices, and as a result the Calcutta, Bombay and Madras offices will be very important and responsible charges. I consider it desirable, therefore, that the appointments held by the officers in charge of these three offices should approximate as closely as possible to those held by the senior officers in the proposed superior Traffic Branch of Postmasters-General's offices, as well as by postal officers in corresponding charges. The four next largest offices, *viz.*, Rangoon, Lahore, Karachi and Delhi, will also be important charges which should be held by officers of higher standing than the Deputy Superintendents, Traffic, now in charge. For this reason, and also to ensure that all the officers in the separate superior Traffic Branch, which I propose should be created, shall have ample practical opportunities of acquiring a thorough knowledge of traffic work, I recommend that special appointments should be provided in this branch for the officers in charge of these four offices also and that these appointments, together with those of the officer in charge of the Agra office, the assistants to the officers in charge of the Calcutta and Bombay offices, the junior assistant to the Deputy Director-General of the Post Office, Traffic, and the nineteen assistants to the officers in charge of the traffic work in Postmaster-General's offices should be placed together in one grade, with approximately the same position and prospects as Superintendents of post offices.

20. **Total Staff of superior Traffic Branch.**—The total staff proposed for the superior Traffic Branch is:—

1 Deputy Director-General of the Post Office, Traffic.
2 assistants to Deputy Director-General of the Post Office, Traffic.
8 officers in charge of the traffic work in Postmaster-General's offices.
19 assistants to officers in charge of the traffic work in Postmaster-General's offices.
8 officers in charge of the Calcutta, Bombay, Madras, Agra, Rangoon, Lahore, Karachi, and Delhi telegraph offices.
2 assistants in the Calcutta and Bombay central telegraph offices.

Or a total of 40 appointments; against which there will be a reduction of 50 appointments in the present superior establishment of the Telegraph Department, a reduction of 13 appointments in the sanctioned establishment of Deputy Superintendents, General, after providing for an additional Deputy Superintendent in the Technical Branch, the abolition of the present temporary appointment of Assistant Director of Traffic in the office of the Director-General of Posts and Telegraphs, and the reduction of four appointments in the sanctioned establishment of Deputy Superintendents, Traffic, on account of the creation of four special appointments for the charge of the Rangoon, Lahore, Karachi and Delhi offices referred to in the preceding paragraph. My proposals, if accepted, will therefore result in a decrease in the total sanctioned strength of the department of twenty-eight appointments. The proposed grading of these new appointments is shown in paragraph 35.

21. **Separation of superior Traffic Branch from establishment of existing Traffic Branch.**—In order to ensure quicker promotion to, and in, the superior Traffic Branch, embracing the appointments specified above, I consider it essential that it should be kept entirely separate from the existing establishment of Deputy Superintendents, Traffic, employed in Telegraph offices. The branch will eventually be recruited as far as possible from subordinates selected at any stage of their service; but it may also be necessary, as the surplus staff of superior officers is exhausted, to recruit a certain number of officers from outside the ranks of the Telegraph Department in the manner explained in paragraph 41 of this letter, in order to ensure a sufficient reserve of officers specially fitted for the higher administrative traffic appointments, and it is essential to provide a separate cadre to which such officers can be appointed direct with prospects of advancement such as will attract suitable men. The grading for the superior Traffic Branch will facilitate the transfer of men between this branch and the ordinary grades of Deputy Superintendents, Traffic, when necessary, and the branch will therefore consist entirely of specially selected and trained traffic officers.

II.—DESIGNATIONS AND HEADQUARTERS OF REVISED STAFF.

22. **Designation of the Director-General of the combined Departments.**—In paragraph 4 of their Resolution No. 830–833, dated the 24th January 1912, the Government of India decided that I should be

styled Director-General of Posts and Telegraphs while administering the Telegraph Department in addition to my own duties as Director-General of the Post Office of India, and I recommend that this title be permanently adopted for the head of the amalgamated departments. As, however, there will in this case no longer be a separate Telegraph Department or a separate Post Office, it will probably be necessary to undertake some simple legislation to provide for the change of title.

23. **Designations of other Officers employed on Telegraph Work.**—As regards the officers employed on telegraph work, I propose that in the case of the Engineering Branch the present designations should be altered as little as possible, and that the designations of the superior Traffic Branch appointments should follow those of the corresponding appointments in the Post Office.

The highest appointment in the Engineering Branch may, I consider, be styled Chief Engineer, Telegraphs.

For the remaining officers of the two new branches I propose the following designations:—

ENGINEERING BRANCH.

At Headquarters—
Personal Assistant to the Director-General of Posts and Telegraphs.
Assistant to the Chief Engineer, Telegraphs.

In Circles—
Director, Telegraph Engineering.
Personal Assistant to the Director, Telegraph Engineering.

In Divisions—
Officer in charge.—Superintendent, Telegraph Engineering.
Attached officers.—Superior Service — Assistant Superintendent, Telegraph Engineering.
Upper Subordinates—Deputy Superintendent, Telegraph Engineering.

Technical Branch—
Chief Electrician.
Assistant Electrician.
Deputy Superintendent, Telegraphs (Technical).
Technical Telegraph Master (or Telegraphist).

SUPERIOR TRAFFIC BRANCH.

At Headquarters—
Deputy Director-General of the Post Office of India (Traffic).
Assistant Director-General of the Post Office, Traffic.
Assistant to the Deputy Director of the Post Office, Traffic.

In Circles—
Senior Officer in Traffic Branch of the Postmaster-General's office — Deputy Postmaster-General, Traffic.
Assistants to ditto.—Superintendent of Post Office (Traffic). Officers of the present superior service employed under Deputy Postmasters-General (Traffic) should, however, be styled Assistant Postmasters-General (Traffic).
Officers of the superior Traffic Branch in charge of telegraph offices may be styled Superintendent, "———" office, and the assistants in the Bombay and Calcutta Offices may be designated "Assistant Superintendent, $\frac{\text{Bombay}}{\text{Calcutta}}$ Office."

24. Upper subordinates of the existing Traffic Branch in charge of telegraph offices other than those specified above will continue to be styled Deputy Superintendent, "———" Office.

25. **Headquarters of Officers.**—The headquarters of officers in the Traffic Branches, except in the cases of officers employed in telegraph offices, should be the headquarters of the Director-General or the Postmaster-General, as the case may be. In the case of the Engineering Branch, the headquarters of the Chief Engineer and his assistant and of the Personal Assistant to the Director-General of Posts and Telegraphs, should be those of the Director-General. All the officers employed at the headquarters of the Director-General should, I consider, be permitted to accompany the Government of India to Simla every year with the exception of the assistant to the Chief Engineer and one of the assistants to the Deputy Director-General, Traffic. The headquarters of the three Directors of Telegraph Engineering should be fixed at Bombay, Lahore (ultimately Delhi) and Calcutta, and those of the Divisional Superintendents of Telegraph Engineering at the following places:—

1.—BOMBAY, CENTRAL AND MADRAS CIRCLE.

(*a*) Bombay.
(*b*) Ajmere.
(*c*) Nagpur.
(*d*) Trichinopoly for the present, but Coimbatore when office accommodation is available.
(*e*) Bangalore.
(*f*) Madras.

2.—PUNJAB AND UNITED PROVINCES CIRCLE.

(*a*) Karachi.
(*b*) Ambala for the present, but Delhi when accommodation is available.
(*c*) Lahore.
(*d*) Lucknow.
(*e*) Allahabad.

3.—BENGAL AND EASTERN BENGAL AND ASSAM CIRCLE.

(*a*) and (*b*) Calcutta.
(*c*) Darjeeling.
(*d*) Dacca.
(*e*) Shillong.

4.—BURMA.

(*a*) Rangoon.
(*b*) Akyab.
(*c*) Maymyo.
(*d*) Mandalay.

The area of the divisions generally will be increased greatly under this scheme and it will probably be necessary in the majority of divisions to station at least one attached officer of the Engineering Branch at some place other than the headquarters of the division. This matter should be left to the Director-General of Posts and Telegraphs to decide according to actual requirements when the scheme of amalgamation is introduced.

III.—PAY AND ALLOWANCES.

26. **Pay of Director-General, Posts and Telegraphs.**—The pay of the appointment of Director-General of the Post Office of India, which was fixed at Rs. 3,000 in 1853, was raised in the despatch from the Secretary of State No. 59-Financial, dated the 27th March 1903, to Rs. 3,000 a month for the first five years' tenure (including periods of officiating service) rising thereafter by annual increments of Rs. 100 to Rs. 3,500 a month. As a member of the Indian Civil Service, the Director-General also draws exchange compensation allowance at the rate of Rs. 138–14–3, the maximum admissible under rule, and in Mr. Ley's letter No. 1800—33, dated the 27th February 1912, the Government of India sanctioned the grant to me, while administering the Telegraph Department in addition to my own duties as Director-General of the Post Office, of a personal allowance of Rs. 300 a month subject to the condition that my total salary should not exceed Rs. 3,500 a month. Excluding this allowance, the average value of the appointment of Director-General of the Post Office, with the present rate of pay and inclusive of

exchange compensation allowance, is about Rs. 3,305* a month. If it is finally decided to amalgamate the Post Office and the Telegraph Department on the lines recommended in this letter, the responsibilities and duties of the Director-General in charge of the combined departments will practically equal those of the two Directors-General in the past. Both of the departments are expanding rapidly and the officer selected for the combined appointment will necessarily be one possessing high qualifications as an administrator, and ordinarily he will have no further prospects of advancement. As it has already been decided that the earliest opportunity should be taken to withdraw exchange compensation allowance by revising the pay of the appointments in respect of which the allowance is admissible, I am of opinion that there is ample justification for fixing the pay of the appointment of Director-General of Posts and Telegraphs at Rs. 3,500 —100—4,000. Exchange compensation allowance would cease to be admissible and the net increase in the pay of the appointment over that of the Director-General of the Post Office of India would amount to about Rs. 528 a month only.

27. **Pay of Postmasters-General.**—In the case of Postmasters-General also there will be a large increase of work under the proposed scheme as, in addition to their postal duties, these officers will be required to deal with all telegraph traffic questions arising in their circle and to control the staff of all telegraph offices. It would shortly have been necessary as regards these appointments also to propose that the rates of pay should be revised so as to permit of the withdrawal of the exchange compensation allowance, and I consider that this opportunity should be taken to remove all distinction between members of the Indian Civil Service and other Postmasters-General and to abolish the special rate of pay admissible for one Postmaster-General, 1st grade, if a member of the Indian Civil Service. The present pay and grading of Postmasters-General is—

1 on Rs. 2,250—50—2,500 = Rs. 2,417
3 on Rs. 1,750—50—2,000 = Rs. 5,750
6 on Rs. 1,500—50—1,750 = Rs. 10,000

and, of the officers permanently holding these appointments, all but two draw exchange compensation allowance. The average pay of these two officers is Rs. 3,584 and the amount of exchange compensation allowance drawn by the other eight officers is Rs. 901. The average cost of the ten appointments is, therefore, 18,167 + 901 = 19,068. Post Office work is becoming more important every year and the same may be said of telegraph traffic work. Considering the pay given to heads of departments under Local Governments and Administrations and the additional responsibilities that will be imposed on Postmasters-General in connection with telegraph traffic work, I am of opinion that there are good grounds for fixing the minimum pay at Rs. 1,750 and that there is ample justification for allowing two of the Postmasters-General to rise to Rs. 2,500, without compensation allowance, instead of one as at present with compensation allowance. It will be more convenient administratively and also for the purposes of audit if the general practice of giving fixed rates of pay is followed in the case of Postmasters-General, and I strongly recommend the adoption of the following scale of pay without exchange compensation allowance—

2 on Rs. 2,500 = Rs. 5,000.
2 on Rs. 2,250 = Rs. 4,500,
3 on Rs. 2,000 = Rs. 6,000.
3 on Rs. 1,750 = Rs. 5,250.

Total - Rs. 20,750.

This scale provides for a total increase of Rs. 1,682 a month or an average increase of Rs. 168 in the value of each appointment. The two Postmasters-General holding the appointment of Deputy Director-General of the Post Office should continue to draw the local allowance of Rs. 200 a month attached to that appointment and it will be advisable to rule that, if necessary, an officer should be given a personal allowance equal to the difference between his pay under the present scale *plus* exchange compensation allowance and his pay under the revised grading, if the latter is less.

28. In the Engineering Branch, I propose that the pay of the Chief Engineer, Telegraphs, should be fixed at Rs. 2,750. The post of Director-General of Telegraphs having been abolished, this appointment will be the highest ordinarily attainable by a telegraph engineer and it is necessary to fix the pay at such a rate as will provide reasonably good prospects for existing officers and future entrants. Apart from this consideration, however, the duties and responsibilities of this officer, as explained in paragraph 10, fully justify the pay here proposed. These duties and responsibilities will comprise not only those of the present Director of Construction but also those of the Electrical Engineer-in-Chief, and his work will include the maintenance of an increasing number of important wireless stations. The average expenditure of the Engineering Branch during the past three years, which would be controlled by this officer under the Director-General's orders, exceeded 40 lakhs a year and his position will correspond closely with that of a Chief Engineer to a Local Government. Exchange compensation should not be admissible.

29. **Pay of Directors, Telegraph Engineering.**—As regards the three Directors, Telegraph Engineering, I recommend that ultimately there should be one appointment on Rs. 2,000 and two appointments on Rs. 1,500 each without exchange compensation allowance. For some years to come these particular rates of pay must remain in abeyance, as the appointments will be held by three of the eleven officers in receipt of the pay of the present administrative grades of the Telegraph Department, which it is proposed elsewhere in this letter should be allowed to remain in force for all officers of the department now in the service. As in the case of the present directorships an officer of the Provincial Service should be eligible for appointment as Director, Telegraph Engineering, if fully qualified to perform the duties attaching to the appointment, and the pay of the appointment, when held by a Provincial Service officer, should be the same as the pay of the corresponding appointments shown in Appendix I. to the Government of India Resolution in the Department of Commerce and Industry, No. 913-918—115, dated the 2nd February 1910, viz., Rs. 1,200 and Rs. 1,600 respectively.

30. **Pay of Superintendents and Assistant Superintendents, Telegraph Engineering.**—For Superintendents and Assistant Superintendents, Telegraph Engineering, including the officers employed in the Technical Branch, the Personal Assistant to the Director-General of Posts and Telegraphs, and the assistant to the Chief Engineer, who will be recruited from exactly the same sources as the existing superior service of the Indian Telegraph Department, I recommend the continuance of the Imperial and Provincial Service time-scales of pay sanctioned in Resolutions No. 913-918—115, dated the 2nd February 1910, and No. 4276-4280—133, dated the 4th June 1912, with the conditions stated in paragraph 4 of the latter resolution. As the number of divisional charges will be reduced, and some officers must be deprived of the charges which they now hold, it will be necessary, in the case of efficient men already in the service, to waive the condition that no officer shall draw more than the pay of the eleventh year of service unless he is in divisional charge. The officers mentioned above should also be granted any local allowances (including house allowances) for which officers of the existing superior service are eligible. I recommend, however, that the two Superintendents of Telegraphs employed as Chief Electrician and senior Assistant Electrician should each be granted a local allowance of Rs. 100 a month and the Assistant Superintendent of Telegraphs

* Average value $\frac{\text{Rs.}}{\frac{3,000 + 3,333}{2}} = 3,166{\cdot}6$

Exchange compensation allowance $\frac{138{\cdot}9}{3,305{\cdot}5}$

employed as junior assistant, a local allowance of Rs. 50 a month in addition to their pay under the time-scales of their service and the allowance admissible to them under the Calcutta house allowance scheme. Except in very special circumstances, these officers will be stationed permanently at Calcutta and their duties will be arduous and of a less varied nature than those of officers employed on ordinary engineering work. Moreover they will always be specially selected or specially recruited officers, and the experience of the past two years has shown the necessity of fixing the emoluments of superior officers employed on technical work on a slightly higher scale than those of the other officers of the Engineering Branch. The Superintendents employed as Personal Assistant to the Director-General and as assistant to the Chief Engineer will have heavier work and responsibilities than those of Superintendents in divisions, and, as they will be stationed at expensive places, I recommend that these officers, as in the case of Personal Assistants in the Post Office, should be given a local allowance of Rs. 100 each in addition to their pay under the time-scale and should be admitted to the Calcutta house allowance scheme.

31. **Pay and grading of Deputy Superintendents, Telegraph Engineering.**—In the case of the Deputy Superintendents, Telegraph Engineering, I recommend that the rates of pay sanctioned in the Resolution of the 2nd February 1910 for Deputy Superintendents, General, should be retained and that, in order to meet the undertaking given to the subordinate staff of the Telegraph Department by the Government of India in their Resolution in the Department of Commerce and Industry No. 830-33, dated the 24th January 1912, and in Mr. Ley's letter No. 1262-38, dated the 9th February 1912, the reduction of fourteen appointments, which it is proposed to effect in the sanctioned establishment of Deputy Superintendents, General, should eventually be made in the lowest grade of Rs. 250—15—325. The ultimate grading for the 58 appointments, which it is proposed to retain for Deputy Superintendents, Telegraph Engineering, will then be—

8 on Rs. 400—25—500.
16 on Rs. 325—15—400.
35 on Rs. 250—15—325.

Any other arrangement would affect adversely the prospects of the Deputy Superintendents of the Engineering Branch in the lowest grade, but, apart from this, I consider that a proportion of eight better paid appointments on Rs. 400—500 and sixteen on Rs. 325—400 is not too high in a cadre of 58 officers, especially in view of the greatly improved prospects on the traffic side. As will be explained later in this letter, of the fourteen Deputy Superintendents, General, who will not be required for engineering work, thirteen will be employed in traffic appointments and one in the Technical branch and, if necessary, on their present scales of pay.

32. **Local allowances for Personal Assistants to Directors, Telegraph Engineering.**—The four Deputy Superintendents, Telegraph Engineering, employed as Personal Assistants to the Directors, Telegraph Engineering, and the Postmaster-General, Burma, will all be stationed in expensive towns, and, as their duties will generally be of a more important nature than those of Deputy Superintendents employed on engineering work, I recommend the grant to each of these four officers of a special charge or local allowance of Rs. 50 a month in addition to their grade pay and the allowances for which they are at present eligible under rule, such as the Presidency and Burma allowances. Under the existing rules Deputy Superintendents, General, are not admitted to the benefits of the house allowance schemes. Superintendents of post offices employed as Personal Assistants to Postmasters-General receive a special allowance of Rs. 100 each in addition to the ordinary local allowances.

33. **Pay and grading of Deputy Superintendents, Technical.**—In the case of the upper subordinates and subordinates of the Technical Branch also, I recommend the retention of the existing rate of pay and allowances. The additional appointment of Deputy Superintendent in this branch recommended in paragraph 12 of this letter should, I consider, be made in the lowest grade, and the cadre will then stand as follows:—

1 on Rs. 400—25—500
2 on Rs. 325—15—400.
4 on Rs. 250—15—325.

The additional appointment will not, however, be filled up by the promotion of a Technical Telegraph Master so long as it is necessary to hold it against one of the supernumerary Deputy Superintendents, General, not required for the Engineering Branch.

I have carefully considered the question of amalgamating this small cadre with that of Deputy Superintendents, Telegraph Engineering, but I have decided to make no proposal to this effect at present as the prospects of promotion of some of the Deputy Superintendents, Technical, would be materially injured if this change were made. Later it may be possible gradually to merge the two cadres into one as vacancies occur in the establishment of Deputy Superintendents, Technical.

34. **Pay of Deputy Director-General of the Post Office Traffic.**—In the superior Traffic Branch I recommend that the pay of the appointment of Deputy Director-General of the Post Office, Traffic, should be fixed at Rs. 1,750—50—2,000. As I have already explained in paragraph 18 of this letter, this appointment should be held by a thoroughly efficient and experienced officer who should be practically of equal rank with Postmasters-General, but he will usually be an officer who has spent the greater portion of his service in the superior Traffic Branch and I do not consider that he should be actually graded with Postmasters-General. I have, therefore, proposed an incremental scale of pay representing a combination of the rates proposed for the two lowest grades of Postmasters-General. It will be unnecessary to grant the Deputy-Director-General, Traffic, a local allowance similar to that given to the other Deputy Directors-General of the Post Office, but his appointment should be admitted to the Calcutta house allowance scheme.

35. **Pay and grading of first division of superior Traffic Branch.**—The remaining thirty-nine appointments proposed for the superior Traffic Branch should in my opinion consist of two divisions, in the first of which there would be the three officers in charge of the Calcutta, Bombay and Madras telegraph offices, the eight Deputy Postmasters-General, Traffic, and the Assistant Director-General of the Post Office, Traffic. The work and the duties of the twelve officers holding these appointments will correspond closely with those of Presidency Postmasters, Deputy Postmasters-General, and Assistant Directors-General of the Post Office, respectively, and I recommend that they should be graded as follows:—

2 on Rs. 1,200—40—1,400.
4 on Rs. 1,000.
6 on Rs. 800.

These officers should be treated for the purpose of all local allowances (including house rent allowances) in exactly the same way as officers of corresponding rank in the Post Office—the Assistant Director-General, Traffic, being given a local allowance of Rs. 150 a month and excluded from the benefits of the Calcutta house allowance scheme.

Pay and grading of Second Division of superior Traffic Branch.—The second division would consist of the five officers in charge of the Agra, Karachi, Rangoon, Lahore, and Delhi telegraph offices, the assistant to the Deputy Director-General of the Post Office, Traffic, the nineteen assistants to Deputy Postmasters-General, Traffic, and the two assistants to the officers in charge of the Calcutta and Bombay telegraph offices.

The position and status of these officers should approximate to that of Superintendents of post offices, but I do not think it is advisable or practicable, to fix the pay of the former on exactly the same rates as those of Superintendents of post offices. There is no reason why the rates of pay of these two classes of officers should be identical for there is no intention of

transferring officers from the one service to the other, nor will the source of recruitment be the same in the two cases. On the other hand, there are practical difficulties in adopting the Post Office grading which is in my opinion unsuitable even in the case of the Post Office. In the first place, the minimum pay of a Deputy Superintendent of Telegraphs is Rs. 250, and, as none of the appointments in the second division of the superior Traffic Branch will be inferior to that of a Deputy Superintendent, the minimum pay fixed for the former should not be less than Rs. 250. Further, it is highly desirable that the pay of the officers in the second division of the superior Traffic Branch should be such as will facilitate transfers from and to the grades of Deputy Superintendents of Telegraphs, for it will frequently be necessary to try officers of the latter class in the superior Traffic Branch and to revert them if they prove unsuitable. I strongly recommend, therefore, the adoption of a time scale of pay rising from Rs. 250 by ten annual increments of Rs. 15 to Rs. 400, and thereafter by annual increments of Rs. 20 to Rs. 600 a month. This scale of pay is based, up to the Rs. 500 stage, on that sanctioned for Deputy Superintendents, while, in continuing to rise to Rs. 600 a month, it provides some prospects with a view to attract capable officers to this important branch of the department, and makes the maximum pay of the scale the same as that now obtainable by Superintendents of post offices. Under the time scale of pay proposed by me the maximum pay of the twenty-seven officers in the lower division of the superior Traffic Branch will exceed Rs. 500 a month, and they will, therefore, under Article 1002 of the Civil Service Regulations be officers of the first class for the purpose of the travelling allowance regulations and will thus all be placed in the same position in this respect as Superintendents of post offices to all of whom first class travelling allowances were specially granted in 1881. The nineteen officers who will be assistants to the Deputy Postmasters-General, Traffic, (Superintendents of post offices Traffic,) will have much arduous inspection to perform and it is important that they in particular should be eligible for first class travelling allowances.

I should have greatly preferred to recommend a maximum pay of Rs. 700 for these officers, but I recognise that probably this proposal could not be agreed to by Government without involving the reconsideration of their recent decision on the proposal to increase to Rs. 700 the maximum pay of Superintendents of post offices. I may, however, state here that in my opinion that the latter officers should eventually be granted a time-scale of pay rising to Rs. 700 stronger than ever. When this change is effected, the maxmum of the time-scale of pay of the second division of the proposed superior Traffic Branch should also be increased to Rs. 700. I might add that the cost of the latter proposal would be less than Rs. 7,000 a year.

As regards house rent allowances I recommend that the twenty-seven officers in the second division of the superior Traffic Branch should be granted the allowance admissible to the present Deputy Superintendents, Traffic, with the exception of the officer holding the appointment of assistant to the Deputy Director-General of the Post Office, Traffic, at headquarters, who should be granted, in lieu of house allowance, a local allowance of Rs. 100 a month similar to that admissible for a Superintendent of post offices holding the appointment of Personal Assistant to the Director-General of Posts and Telegraphs.

36. **Pay and grading of Deputy Superintendents of the ordinary Traffic Branch.**—The establishment of Deputy Superintendents in the existing Traffic Branch will be reduced by the four appointments provided by the superior Traffic Branch for the charge of the Karachi, Rangoon, Lahore, and Delhi Offices, and I recommend that this reduction also should be effected in the lowest grade. This establishment will then be graded as follows:—

8 on Rs. 400—25—500.
16 on Rs. 325—15—400.
27 on Rs. 250—15—325.

37. **Continuation to officers now in the service of the higher rates of pay at present in force for the eleven administrative appointments.**—In the preceding paragraphs proposals have been put forward for the provision of five administrative appointments carrying salaries in excess of the maximum of the time-scales of pay which it is proposed to retain for telegraph engineers. Under the existing organization, however, there are at present, omitting the appointment of Director-General of Telegraphs in respect of which the Government of India have exercised their right to select an officer outside the ranks of the Telegraph Department, eleven appointments on salaries varying from Rs. 1,500 to Rs. 2,250 a month to which officers now in the superior service of the Telegraph Department may reasonably expect promotion, if qualified, and, in accordance with instructions conveyed to me in paragraph 5 of the Resolution of the Government of India in the Commerce and Industry Department No. 830–833, dated the 24th January 1912, that, in such steps as might be taken towards the amalgamation of the Post Office and the Telegraph Department, all possible protection should be afforded to the personal interests and prospects of the existing staff of both departments in all grades, I propose that the pay and prospects of existing officers of the department should not be affected apversely and that the present grading of eleven high appointments should be maintained for them, except in the case of the highest post, namely, that of Chief Engineer which should take the place of one of the appointments on Rs. 2,250. This arrangement necessarily involves temporary extra expenditure on Government, as for some years a larger number of highly paid appointments must be maintained than is required for my scheme, but this is unavoidable if the interests of existing officers are to be safeguarded, as I understand is the intention of Government. The plan adopted to meet the case must ensure as far as possible that the emoluments of a qualified officer remaining in the service shall not at any stage of his career be less than they would have been if the existing system had remained in force; and on the other hand measures have to be taken to prevent the immediate reduction in the staff of superior officers which I shall propose elsewhere in this letter from resulting in unduly rapid promotion to the higher grades. The latter difficulty could, it is true, be overcome by maintaining an imaginary cadre in which the places of officers who, owing to amalgamation, leave the department permanently, would be taken by dummies who would be moved up in the imaginary cadre in the proper order and would in course of time be shown as filling in their proper turn officiating and permanent appointments in the present administrative grades on the existing rates of pay. Under this system no officer remaining in the service would attain the pay of the existing administrative appointments earlier than if there had been no reduction of staff owing to amalgamation; but the system is undoubtedly objectionable from an audit point of view, and it would be exceedingly difficult in actual practice. Moreover, it has the disadvantage of failing to afford officers the officiating promotions which they would have received if the dummy appointments had continued to be held by the present incumbents, and also of failing to differentiate between dummy appointments representing officers who have prematurely retired, and those representing officers who, even if they had remained in the service, would not have been permitted to proceed beyond the maximum pay of a Divisional Superintendent of Telegraphs. Further the officers affected would not understand the arrangement clearly and there would always be the danger of their considering that they had been dealt with illiberally.

After careful consideration of the matter, I am of opinion that the only satisfactory manner in which the difficulty can be overcome is the adoption of a system of promotion under which the imposition of a service limit would act as an automatic check on unduly rapid promotion to, and in, the administrative grades.

APPENDIX I. (*continued*).

These grades are at present filled as follows:—

Name.	Rank.	Pay of Substantive Appointment.	Year of Service on 1st October 1912.	Date of Birth.	Date on which obliged to retire.	REMARKS.
		Rs.				
1. F. E. Dempster -	Director, 1st Class -	2,250	35th	9–7–58	9–7–13	On leave.
2. C. Streatfeild-James. - -	Ditto. -	2,250	34th	18–4–59	18–4–14	
3. R. O. Lees - -	Director, 2nd Class -	2,000	34th	17–10–58	17–10–13	Officiating, 1st Class.
4. I. C. Thomas -	Ditto. -	2,000	32nd	4–4–61	4–4–16	
5. J. W. Hensley -	Director, 3rd Class -	1,750	34th	10–3–58	10–3–13	On leave.
6. H. S. Styan - -	Ditto. -	1,750	31st	16–12–61	16–12–16	Officiating, 2nd Class.
7. H. E. Chappel -	Ditto. -	1,750	30th	8–3–63	8–3–18	
8. J. M. Coode - -	Director, 4th Class -	1,500	28th	13–11–65	13–11–20	Officiating, 3rd Class.
9. R. T. Gibbs - -	Ditto. -	1,500	27th	20–5–65	20–5–20	On leave.
10. M. G. Simpson -	Electrical Engineer-in-Chief.	1,600 in the 1,500–2,250 grade.	26th	3–11–66	3–11–21	
11. H. C. A. Goodall -	Director, 4th Class -	1,500	27th	9–6–66	9–6–21	On leave.
12. R. Elrington	Superintendent -	1,250	31st	22–6–61	22–6–16	Superseded.
13. W. P. Henderson -	Ditto. -	1,250	25th	6–6–68	6–6–23	Superseded.
14. R. Meredith -	Ditto -	1,250	24th	21–5–67	21–5–22	Officiating Director, 3rd Class.
15. C. W. Sowerby-Coo	Ditto. -	1,250	23rd	15–3–69	15–3–24	Officiating Director, 4th Class.
16. H. Mayston -	Ditto. -	1,250	23rd	30–1–68	30–1–23	On leave.
17. W. Sutherland -	Ditto. -	1,250	22nd	16–12–70	16–12–25	Officiating Postmaster-General and considered as absorbing one officiating vacancy in 4th Class of Telegraph Director.
18. L. Truninger -	Ditto. -	1,250	22nd	29–9–70	29–9–25	Officiating Director, 4th Class.

The circle organisation was in force for too short a time to afford trustworthy data of the years of service in which officers could fairly expect officiating and permanent promotion to the various administrative grades. It seems, therefore, best to consider the cases of a few individual officers. Mr. Meredith, for example, who has just entered his 24th year of service, is already officiating as Director, 3rd Class, on a salary of Rs. 1,750 and, if he remains in the service, must become substantive Director 4th Class, on the 10th March 1913, when Mr. Hensley has to retire. He would receive substantive promotion to the 3rd Class on the 18th April, 1914 in his 25th year of service after the retirement of Messrs. Dempster, Lees and Streatfeild-James and would probably have been officiating in the 2nd Class before that date. His promotion to the substantive rank of Director, 2nd Class, would be due at the latest on the 8th March 1918 in his 29th year of service and his substantive promotion to the 1st Class on the 13th November 1920 in his 32nd year of service. It is almost certain, however, that Mr. Gibbs will retire before he attains attains 55 years of age and in view of this and other unforeseen casualties it is not only possible, but highly probable, that, if the present system of administration remained untouched, Mr. Meredith would reach the 2nd and 1st Class considerably earlier than in his 29th and 32nd year of service, respectively, and he would certainly officiate in those classes before March 1918 and November 1920.

Mr. Sutherland was appointed to officiate as Director, 4th Class, on the 13th July 1911 in his 20th year of service and, even if no unforeseen casualties occurred, would become substantive Director, 4th Class, on the 18th April 1914 in his 23rd year of service; 3rd Class on the 8th March 1918 in his 27th year of service; 2nd Class on the 13th November 1920 in his 30th year of service; and 1st Class on the 21st May 1922 in his 31st year of service. Mr. Coode, who is already Director, 4th Class, must attain the rank of Director, 3rd Class, on the 10th March 1913, in his 28th year of service; 2nd Class on the 18th April 1914 in his 29th year; and 1st Class on the 16th December 1916 in his 32nd year. Mr. Gibbs, if he remains in the service, must receive promotion to the 3rd Class of Directors at the latest on the 9th July 1913 in his 27th year of service, to the 2nd Class on the 4th April 1916 in his 30th year; and to the 1st Class on the 8th March 1918 in his 32nd year of service.

Taking the cases of these particular officers as examples, it would seem necessary to allow the various rates of pay of the existing administrative appointments to be attained in the following years of service provided that vacancies existed and that the officers to be promoted were considered fit for administrative rank:—

Grade of Rs. 1,500 = officiating 21st year: substantive 23rd year.

Grade of Rs. 1,750 = officiating 23rd year: substantive 25th year.

Grade of Rs. 2,000 = officiating 25th year: substantive 28th year.

Grade of Rs. 2,250 = officiating 28th year: substantive 31st year.

APPENDIX I. (*continued*).

I therefore propose the adoption for all officers now serving in the Telegraph Department of the following scale of pay above Rs. 1,250.

No. of Appointments.	Rate of Pay.	Conditions of Appointments.	
		Permanent.	Officiating.
	Rs.		
1	2,750	No condition	No condition.
1	2,250 Imperial / 1,800 Provincial	Not less than 30 years' service	Not less than 27 years' service.
2	2,000 Imperial / 1,600 Provincial	„ „ 27 „ „	„ „ 24 „ „
4	1,750 Imperial / 1,400 Provincial	„ „ 24 „ „	„ „ 22 „ „
3	1,500 Imperial / 1,200 Provincial	„ „ 22 „ „	„ „ 20 „

In this scale the value of the appointment of Electrical Engineer-in-Chief has been taken at rather less than the mean of the sanctioned pay and has been converted into a fourth appointment on Rs. 1,750 a month. The present incumbent, Mr. Simpson, would have to be given the option of remaining on his present incremental scale of pay or of electing for the revised rates of pay. In the latter case he would take his place in the seniority list immediately below Mr. Gibbs, and his pay would be regulated accordingly.

The officer holding the appointment of Chief Engineer would receive the pay fixed for that appointment (Rs. 2,750) without any restriction as to length service, but all other officers now in the Telegraph Department would draw pay strictly in accordance with the above scale, irrespective of the duties on which employed, and subject only to the proviso that Government were satisfied that they were in every way fit for promotion and that they had the qualifying service. The ten officers in receipt of these special rates of pay would, however, always be employed as far as posible in the more important appointments under the scheme of amalgamation. Three would hold the proposed appointments of Director, Telegraph Engineering, and, so long as more than four of the present superior officers remained in the service, one of the excess would hold the appointment of Deputy Director-General of the Post Office of India, Traffic, another would be employed as Postmaster-General, Burma, and a third would practically always be employed as officiating Postmaster-General in some other circle. The remainder of the officers drawing the special rates of pay would be employed in the most suitable manner possible, probably as Chief Electrician and in charge of the telegraph offices at Calcutta, Bombay and Madras, but as the total number of officers now in the service fell below eleven, these appointments would be filled by officers on the rate of pay fixed for such appointments under the amalgamation scheme. If my proposals in respect of the continuation of the present administrative rates of pay are sanctioned, it will be necessary to provide that, if a vacancy in the proposed scale of pay (whether permanent or officiating) cannot be filled owing to the next senior qualified officer being ineligible by length of service, the remaining vacancies in the chain should be filled as if the ineligible officer had been promoted. For example if there were an officiating vacancy on Rs. 2,250 and the next senior officer fit for promotion had not completed 27 years' service, the vacancy on Rs. 3250 would remain unfilled, but officiating promotions would be made to the Rs. 2,000 and lower grades, if qualified officers were forthcoming, exactly as if the vacancy on Rs. 2,250 had been filled.

It is of course practically impossible to calculate with any degree of accuracy the financial effect of the adoption of the foregoing proposal, but, as I shall show later in this letter, the services of about 71 of the present superior telegraph officers will be retained after amalgamation is affected, and all these officers have to leave the service before normal conditions will be attained. This will probably take over 20 years and the maximum cost of continuing these higher rates of pay in the manner recommended by me, over and above the cost of the ultimate establishment proposed for the combined departments, should therefore be Rs. 3,750* a month or Rs. 45,000 a year to commence with, decreasing annually after a certain number of years until it finally disappeared in about 24 years. Against this extra expenditure has to be set the saving on account of the Postmaster-Generalships which one, and later two, telegraph officers will hold.

IV.—RECRUITMENT AND TRAINING.

38. **Proportion of subordinates to be promoted to superior establishment of Engineering Branch.**—In connection with the last reorganisation of the Telegraph Department the Government of India in paragraph 31 of their despatch to the Secretary of State, No. 153-Salaries, dated 1st July 1909, laid considerable stress on the desirability of the admission of subordinates to the superior grades of the department and recommended that, while five-eighths of the superior establishment should be recruited from England, one-fourth should be obtained in India and one-eighth by promotion from the subordinate ranks. On the assumption that the annual recruitment of four officers would be necessary to keep the department up to strength this arrangement would result in the promotion on the average of a subordinate once in every two years. I consider that the arguments stated in the despatch referred to above in favour of the promotion of subordinates to an establishment responsible for both engineering and traffic work, apply with equal force to their promotion to a purely engineering cadre, and I am firmly convinced that it will always be possible to select one subordinate every two years who is qualified for promotion to the superior establishment of the proposed Engineering Branch. This establishment will, however, be reduced under the proposals contained in this letter by slightly more than one-half, and it is unlikely that the annual recruitment of more than two telegraph engineer officers will be necessary in future. I recommend therefore that the proportion of the superior staff of the Engineering Branch to be recruited by promotion from the subordinate ranks should be fixed at one-fourth, and that one-half of the establishment should be recruited from England and the remaining one-fourth in India. In paragraph 20 of the Resolution of the Government of India in the Department of Commerce and Industry, No. 913–918–115, dated the 2nd February 1910, a promise was made to the subordinates that one-eighth of the vacancies in the superior establishment would be filled by promotions from the subordinate ranks as soon as the excess in the sanctioned strength of officers then existing was absorbed. As, however, recruitment has

* Cost of present 11 administrative appointments (Rs. 20,000) less cost of four proposed administrative appointments (Rs. 7,500) less maximum pay of seven telegraph superintendents (Rs. 8,750).

been stopped for a considerable time pending the decision on the question of amalgamation, no such promotion has been made as yet, although the excess was absorbed some time ago, and in consequence there is a general feeling among the subordinate staff that the undertaking of the Government of India in this respect has not been fulfilled. There are several upper subordinates now in the service who are believed to be in every respect fitted for appointment to the superior Engineering Branch and I propose, in pursuance the undertaking given by Government in 1910, that before the method of recruitment described above is brought into effect, three of them should be promoted in the first three vacancies that occur in the superior establishment of the Engineering Branch after the scheme is sanctioned. With this exception the procedure for recruitment described in the Government of India despatch in question, modified as regards appointments in India in the manner directed in paragraph 7 of the despatch from the Secretary of State No. 24-Tel., dated the 3rd December 1909, should remain unaltered and, ordinarily, one officer will be recruited from England annually, the second vacancy yearly being filled by the appointment direct to the Provincial Service of a candidate selected in India and by the promotion to that service of a selected subordinate, alternately.

The question whether the proportion of appointments to be filled by promotions from the subordinate ranks is sufficient should, in my opinion, be reconsidered at the end of seven years, by which time the Director-General will be in a position to report fully on the manner in which these officers have acquitted themselves in their higher appointments and the number of subordinates who have been found qualified to fill these appointments, and also whether any improvement in the class of recruits has resulted from the promotion of subordinates to the superior grades.

I may add that the subordinates selected for promotion to the superior engineering establishment will invariably be men of marked ability, and they will almost invariably be Deputy Superintendents whose pay in their own grade does not exceed Rs. 370 a month. Thus they can be brought on to the time scale of pay of the Provincial Service at the point prescribed by the Civil Service Regulations without affecting adversely the prospects of superior officers of six years' standing and upwards then in the service.

39. **Training and Examination of Officers appointed direct to superior establishment of Engineering Branch.**—As regards the training of officers appointed direct to the superior establishment of the proposed Engineering Branch I consider it necessary, with the object of ensuring that only really suitable officers are retained in the department, to recommend the adoption of more stringent and definite rules than those at present in force. Under the existing system officers appointed direct to the present superior establishment are attached to some large construction work for three months' training in construction duties and then to one of the Presidency telegraph offices for twelve months for training in signalling, traffic management and signal office routine. They are not eligible for their third increment under the time scale of pay until they have qualified in signalling and (if not Indians) have passed in Hindustani by the lower standard, but they are not required to pass a professional examination nor are they required to show that they have any knowledge of accounts. I consider, however, that on the amalgamation of the Telegraph Department with the Post Office and the separation of engineering and traffic work, an officer appointed direct to the superior establishment of the Engineering Branch, whether in England or in this country, should first be attached for a period of six months to the office of the Chief Electrician for a course of instruction in signalling, technical telegraphy (including the adjustment of instruments and apparatus), the nomenclature and care of telegraph stores, and the more important processes of the telegraph workshops. He should then be employed on divisional engineering work in such a manner as will afford him every opportunity of gaining experience of the work of a telegraph engineer, and should be required to pass, within three years of joining the department, not only the examination in signalling and the lower standard examination in Hindustani required by the existing rules, but also a professional examination similar to that prescribed for assistant engineers of the Public Works Department. The examination should be such as to show that he has an intimate knowledge of the modes of telegraph and telephone construction in use in India; the material used and the sources from which obtained; the management of line staff; the testing of lines; the adjustment and care of all telegraph instruments and apparatus in use in India; and that he is thoroughly acquainted with the accounts rules of the department and the forms of account in use. The examination may be conducted by the Director of Telegraph Engineering in whose administration the candidate is serving; but, as in the case of the Public Works Department, a candidate should not be permitted to appear for it until a special report by his Divisional Superintendent of Telegraph Engineering on points of qualification which cannot be tested by examination such as physical energy, efficiency in practical work and capacity to manage subordinates has been submitted to, and found satisfactory by, the Director-General of Posts and Telegraphs. Any increments falling due after the prescribed period of three years should be withheld until the examination is passed, subject, however, to the conditions that the Director-General may, in special cases, afford an officer a reasonable extension of the period of three years without enforcing the penalty of the loss of increments, and may, at his discretion, restore an officer whose increments have been withheld to the position in the incremental scale which he would have held but for his failure to pass the prescribed examination within the prescribed period.

40. **Recruitment and Training of Deputy Superintendents, Telegraph Engineering.**—Deputy Superintendents, Telegraph Engineering, should, I consider, be recruited and trained in exactly the same manner as the present Deputy Superintendents, General, except that subordinates of the Technical Branch as well as inspecting Telegraph Masters and Inspecting Telegraphists should be considered eligible, and should be encouraged to qualify, for selection as Deputy Superintendents, Telegraph Engineering.

41. **Recruitment and Training of Officers for the superior Traffic Branch.**—In the case of the superior Traffic Branch the majority of the appointments will be filled, as the surplus staff of officers belonging to the present superior and upper subordinate establishment is exhausted, by the selection of specially qualified officers from the upper subordinate and subordinate signalling staff of the department. I consider it necessary, however, partly in order to guard against any possibility of a dearth of suitable officers for the highest traffic appointments and partly with a view to obtaining from other sources, including other telegraph administrations, the services when necessary of officers possessing special qualifications, that the Director-General of Posts and Telegraphs should be at liberty to make direct appointments to the superior Traffic Branch from outside the ranks of the signalling establishment. It appears to me to be undesirable to place any restrictions on the powers of the Director-General to make such appointments but, if the Government of India consider a limit necessary, I would suggest that he should be given authority to recruit from outside sources not more than one-fourth of the total establishment sanctioned for the superior Traffic Branch. Ordinarily these outsiders would be appointed on probation on a pay of Rs. 200 a month, but it might be advisable occasionally to obtain from England an officer who would enter the scale at any stage considered suitable and take his position accordingly in the seniority list. The probationers as well as the officers selected for trial in the superior Traffic Branch from other branches of the Telegraph Department should be attached to the Chief Electrician's office at Alipore for a course of instruction in signalling and in technical subjects and be employed

APPENDIX I. (*continued*).

subsequently during the early stages of their service in the superior Traffic Branch in such a manner as will afford them opportunities of making themselves thoroughly acquainted with traffic control and the management and administration of telegraph offices. All of these officers should be required within two years of their appointment to the branch to pass an examination which will be such as to test their knowledge of the Traffic Instructions, the Telegraph Guide, the code rules relating to the management of telegraph offices and the control of office establishment, the system of accounts and the various forms connected therewith. An officer who fails to pass this departmental examination within the prescribed period, unless it is specially extended by the Director-General, should be reverted to his permanent appointment and in the case of a probationer his services should be dispensed with.

An officer selected from the British Post Office for service in this branch otherwise than as a probationer would ordinarily be brought out on an agreement for a term of years and provision would be made in his agreement that the retention of his services in India on its termination would be dependent on his passing the departmental examination within the prescribed period. An officer appointed on probation on the special pay of Rs. 200 a month would be transferred to the sanctioned establishment of the superior Traffic Branch in the first permanent vacancy that occurred after he had passed the departmental examination. Subordinates promoted to the superior Traffic Branch will be considerably older than probationers and if the casualties in the branch average about seven in four years as may be assumed, it would not ordinarily be necessary to recruit a probationer more frequently than about once in four years, and the probationary appointment on Rs. 200 will therefore usually remain unfilled for about two years out of four. Provision has accordingly been made in estimating the financial effect of the amalgamation scheme for only one-half of the cost of this appointment.

42. **Appointments and Promotions requiring the sanction of the Government of India.**—All first appointments to the superior service of the Engineering Branch and promotion to administrative posts in that branch should in my opinion be approved and notified by the Government of India as in the case of the existing superior establishment of the Telegraph Department. As regards the proposed superior Traffic Branch, however, I recommend that the procedure followed in respect of the higher appointments in the Post Office should be adopted, and that the sanction of Government should be obtained only in the case of first appointments (permanent or officiating) to the post of Deputy Director-General of the Post Office of India, Traffic, or to the upper division of the branch and in the case of grade promotions in that division which involve supersessions. All other appointments and promotions should, I consider, be left to the Director-General to deal with as in the case of corresponding officers in the Post Office.

V.—UTILISATION OF EXISTING STAFF.

43. **Number of superior officers of the Telegraph Department now in the service who can be employed in appointments provided under the scheme of amalgamation.**—Under the proposals contained in the preceding paragraphs the sanctioned establishment of superior officers of the Telegraph Department will be reduced from 96 to 46, the establishment of Deputy Superintendents, General, from 72 to 58 and that of Deputy Superintendents, Traffic, from 55 to 51, while the temporary appointment of Assistant Director of Traffic will be abolished, making a total reduction of 69 appointments against which it is proposed to create one appointment of Deputy Superintendent in the Technical Branch and 40 appointments in the superior Traffic Branch. Included in the latter are 21 important appointments which can suitably be filled by superior officers not required for the separate Engineering Branch, namely, those of the Deputy Director-General of the Post Office, Traffic; the Superintendents in charge of the telegraph offices at Calcutta, Bombay, Madras and Agra; the Deputy Postmasters-General in charge of the Traffic Branch in each postal circle; and the senior assistant to each of these Deputy Postmasters-General. For these appointments I propose to select 21 of the superior officers now in the service who are considered best fitted for traffic work. These officers will be retained in the Traffic Branch for the remainder of their service on the pay which they would get under the existing system, that is, their pay under the time scale of pay or the special rates of pay which I have proposed in paragraph 37 of this letter to provide for the 11 senior officers so long as any of the present superior officers remain in the service. As far as possible these selections will be made with the consent of the officers. The advantage of utilising the services of the surplus officers in this way is obvious and the arrangement also ensures that the Traffic Branch will be administered properly from the first, and that the selection of subordinates for these higher appointments will be a gradual process as it ought to be. Except in very special circumstances no officer, who is selected for traffic work, should be transferred subsequently to the Engineering Branch, as otherwise promotion to executive rank in that branch would suffer and recruitment would be interrupted. Moreover, the work of the officers selected for the superior Traffic Branch will be more efficient if their future prospects are bound up with that branch. The more junior of the superior officers now serving will be selected as far as possible for appointments as assistants to Deputy Postmasters-General, or as these particular officers will be styled, Assistant Postmasters-General, Traffic, but in order that their prospects of advancement may be as good in the Traffic Branch as if the present system had remained in force, it will be necessary to abolish in their case the bar in the time scale of pay under which an officer is not permitted to go beyond the pay of the eleventh year of service unless he is in charge of a division or its equivalent and to rule that all officers belonging to the present superior service employed in the superior Traffic Branch should be granted all increments under the time scale of pay as they become due, provided their work is satisfactory. Without this provision it would be impossible to induce officers of the existing cadre to join the Traffic Branch, and it is but fair to maintain the present prospects of the officers who will be selected for this branch from the existing superior staff.

One other of the surplus superior officers can be suitably employed as Superintendent of Stores in the appointment of Chief Storekeeper sanctioned in the despatch from the Secretary of State No. 24-Tel. of the 3rd December 1909, and I recommend that a second superior officer should be employed to assist the Superintendent of Stores so long as the services of a surplus officer of the rank of Assistant Superintendent are available. The Store Branch of the Telegraph Department is in urgent need of a complete reorganisation, and this opportunity should be taken to afford the officer in charge, who is greatly overworked, some relief so as to enable him to devote more time to the really salient questions of administration. This important branch of our organisation, I am bound to say, has not received proper attention in the past, and it is essential in the interests of economy that it should have an adequate controlling staff. It should be directly under the Director-General.

If the proposal in paragraph 37 to retain 11 highly paid appointments for the existing staff of telegraph officers is sanctioned, I recommend that one of the officers on such pay should be employed as Postmaster-General, Burma. The appointment will be an acting one for some time as the first three permanent vacancies in the staff of Postmaster-General should be filled by departmental officers. Messrs. Tulloch and C. C. Sheridan would certainly have been recommended to Government for substantive promotion to Postmaster-General to fill the vacancies caused by the retirement of Mr. Jardine and myself in 1913, and Mr. Schone-

man would have been recommended for similar promotion when Mr. Tulloch retired in March 1914. I consider, therefore, that in view of the undertaking given by the Government of India that all possible protection should be afforded to the personal interests and prospects of the staff of both the Post Office and the Telegraph Department, these three officers should be provided for before a Postmaster-Generalship is permanently filled by one of the telegraph officers referred to above. Further, I propose that when a suitable opportunity occurs, another of these telegraph officers should be utilised in filling one leave vacancy of Postmaster-General which would not in the ordinary course be due to a departmental officer of the Post Office, and thereafter it is likely that it will always be practicable to provide for this second officer of this rank without affecting the prospects and claims of departmental officers of the Post Office. In effect, these two telegraph officers will take the place of civilians for the time being.

While holding the appointment of Postmaster-General a telegraph officer will draw his telegraph pay, whether he is filling a permanent or an officiating vacancy. In the former case he will absorb one appointment of Postmaster-General in the grade to which he would have been promoted from time to time if he had been appointed Postmaster-General on the ordinary scale of pay, and his name will be shown accordingly in the seniority list. The proposal that a telegraph officer holding a Postmaster-Generalship should draw his own pay is made in order to ensure that existing telegraph officers should have as nearly as possible the same prospects of promotion as at present. This would not be the case if it were decided that a telegraph officer appointed Postmaster-General should draw the postal pay as he might at some stage be in receipt of less than his telegraph pay, and acting promotions of telegraph officers would also be affected. It can be arranged without difficulty that the officer selected for appointment as Postmaster-General will be drawing not less than Rs. 1,750, the minimum pay proposed for Postmasters-General, thus avoiding any risk of the complaint that such an officer is inadequately remunerated for the class of work he has to perform.

44. Under the above proposals the services of 25 of the surplus superior officers of the Telegraph Department who will become supernumerary to the authorised establishment can be utilised with advantage until they retire or die. The question of the treatment to be accorded to the remainder of the surplus has been dealt with separately in paragraph 46.

A statement is attached (Annexure III., Statement C) showing exactly how it is proposed to dispose of the existing staff of superior officers and Deputy Superintendents.

45. **Number of upper subordinates of the Telegraph Department now in the service who can be employed under the amalgamation scheme.**—After providing for the employment of 21 superior officers of the Telegraph Department 19 appointments in the proposed superior Traffic Branch remain unfilled. Two of these, namely, the Assistant Director-General of the Post Office, Traffic, and the assistant to the Deputy Director-General of the Post Office, Traffic, I propose should be filled by the appointment of one officer outside the establishment of the Telegraph Department and of the existing temporary Assistant Director of Traffic. The remaining 17 appointments will be filled by specially selected Deputy Superintendents of the present Traffic, Technical and General Branches. Fourteen appointments of Deputy Superintendent, General, will remain surplus after the requirements of the Engineering Branch have been met, but two or three of these appointments which are now vacant will not be filled in the meantime, and it will be possible to select about nine Deputy Superintendents, General, for permanent appointment to the superior Traffic Branch. Thus there will remain only two or three Deputy Superintendents, General, unprovided for, and the services of these officers will be utilised temporarily, one in the Technical Branch against the additional appointment of Deputy Superintendent proposed for that branch, and the remaining one or two in telegraph offices in place of Deputy Superintendents, Traffic, selected for the superior branch. These officers will remain on their present scales of pay, and will be treated in every way as if the present cadre of 72 Deputy Superintendents, General, had remained unaltered, that is, they will be treated as supernumerary Deputy Superintendents, General, temporarily employed as Deputy Superintendents, Traffic or Technical. They will return to engineering work as soon as there are suitable vacancies for them in the reduced cadre of Deputy Superintendents, Telegraph Engineering, and the appointments in the Traffic and Technical branches temporarily held by them will then be filled up in the ordinary way. The reduction by four of the establishment of Deputy Superintendents, Traffic, necessitated by the transfer to the superior Traffic Branch of the charge of the Rangoon, Lahore, Delhi, and Karachi telegraph offices will be effected immediately by the transfer of four Deputy Superintendents, Traffic, to the new superior branch, and the promotion of junior Deputy Superintendents, Traffic, to take their places in the higher grades, leaving four vacancies in the lowest grade unfilled. I may point out in this connection that the reduction of four appointments in the present establishment of Deputy Superintendents, Traffic, will not affect adversely the prospects of men already in the service, owing to the fact that the total number of higher appointments, for which members of the signalling branch will be eligible, will be materially improved by the formation of the superior Traffic Branch.

VI.—REDUCTION OF EXISTING STAFF.

46. **Retirement on Special Pensions of Surplus Staff of Superior Officers.**—In the preceding paragraphs, I have shown that the establishment proposed for the combined Post and Telegraph Departments will absorb the whole of the sanctioned staff of both departments, with the exception of 50 officers of the superior establishment of the Telegraph Department, and that the services of 25 of these officers can be suitably utilised in Postmaster-General's appointments, in the new superior Traffic Branch and in the Stores Branch. Including one apprentice Assistant Superintendent, who will very shortly qualify for permanent appointment, the total strength of the superior establishment of the Telegraph Department, owing to the cessation of recruitment during the last few years, is at present only 88 against a sanctioned establishment of 96. The actual surplus staff of superior officers for whom it is not possible to provide appointments under the amalgamation scheme is, therefore, only 17, and against this surplus has to be set the compulsory retirement during 1913 of Messrs. Hensley, Dempster and Lees on attaining 55 years of age. It would be extremely wasteful to retain for an uncertain period 14 highly paid officers as supernumerary to the proposed establishment, and, in view of the undertaking given to the staff of both departments in January last that their interests and prospects would be protected, I would be averse from selecting 14 officers for compulsory discharge with compensation pensions under Article 427 of the Civil Service Regulations. I therefore recommend the offer in general terms for a specified period from the date on which amalgamation is effected of such special pensions as will be likely to induce the requisite number of officers to retire voluntarily. In 1887 it was decided to provide some special inducements for the retirement of officers of a certain standing in the Telegraph Department in order to remove a block of promotion, and the terms offered in the Resolution of the Government of India in the Public Works Department, No. 136-T. E., dated the 21st October 1887, were that for a period of six months all officers who had served for 18 years, of which not less than 16 years had been spent on active service, would be considered eligible for retirement on the following terms:—

(*a*) The pension which would be due if the officers were retiring on medical certificate.

APPENDIX I. (*continued*).

(*b*) An additional pension calculated at the following rate :—

To officers under 50 years of age—Rs. 1,000 per annum.

To officers in their 51st year—Rs. 900 per annum.
" " 52nd " " 800 " "
" " 53rd " " 500 " "

Officers who had completed their 53rd year were given no extra pension, but were permitted to retire within the prescribed period under the provisions of clause (*a*) above, and the special terms were applicable subject to certain conditions to officers who completed the qualifying period of service at a date subsequent to that of the resolution quoted.

On the 1st April next the 31 officers shown in the statement annexed to this letter (Annexure III., Statement B.) will have completed 18 years' total service. Of this number, two will retire in the ordinary course in July and October 1913, and one other, Mr Streatfeild-James, will be nearly 54 years of age, and will be due to retire in April 1914. Of the remainder I have every reason to suppose that at least 13 officers whose services could be spared would apply to be permitted to retire if special inducements were offered similar to those sanctioned in 1887, and I strongly recommend that they should be given an opportunity of doing so. I do not think that it would be necessary to extend these inducements to officers who had not actually completed the qualifying service on the date on which the orders regarding amalgamation are published. I propose that the concession should be granted subject to the conditions in clauses III. and IV. of the Resolution of the 21st October 1887, and that it should be limited to officers who have the qualifying service on the date of the publication of orders on this scheme, and who submit their resignations within six months from that date.

I am not in a position to say which officers would tender their resignations if the above proposals were accepted, or which of the resignations submitted would be accepted, and I am, therefore, unable to estimate the financial effect of the proposal. It seems probable, however, that the majority of the 13 officers, whose retirements it is hoped to effect by these special inducements, would retire in any case as soon as they had completed the qualifying service for the maximum pension admissible under Article 641 of the Civil Service Regulations, and the effect of offering the special terms proposed will probably not add very greatly to the pensionary charges of the Telegraph Department. If 16 officers do not retire by the time the scheme of amalgamation is brought into effect, the number of supernumerary officers referred to in paragraph 44 will be increased temporarily.

VII.—SPECIAL ADDITIONAL PENSIONS.

47. **Special Additional Pensions now Admissible.**—Under the provisions of Articles 642 and 643 of the Civil Service Regulations, special additional pensions of Rs. 2,000 and Rs. 1,000 a year are admissible to officers of the Telegraph Department appointed in England as rewards of approved service in certain positions, and on the reorganisation of the department in 1910 the Government of India ruled, in Mr. Ley's letter No. 4010–108, dated the 31st May 1910, that the following officers should be considered eligible for these pensions :—

(*a*) Officers appointed not later than 1897—

(i) Additional pensions of Rs. 2,000 a year to those who have rendered three years' approved services as Director-General or as next senior officer in the department (two appointments).

(ii) Additional pensions of Rs. 1,000 a year to those who have rendered approved service as Directors of Telegraphs, 1st, 2nd and 3rd class; the senior Director of Telegraphs, 4th class; or the Electrical Engineer-in-Chief (eight appointments).

(*b*) Officers appointed later than 1897—

Additional pensions of Rs. 1,000 a year to those who have rendered not less than three years of effective service as Director-General; Directors of Telegraphs, 1st and 2nd class, or the Electrical Engineer-in-Chief, provided that in the case of the latter the three years of service have been rendered on a pay of not less than Rs. 1,950 a month (six appointments).

Special additional pensions proposed for officers now in the service.—These special additional pensions should continue to be admissible to officers appointed in England now serving in the Telegraph Department, and I accordingly recommend, subject to the present conditions :—

(*a*) In the case of officers appointed not later than 1897—

(i) Additional pensions of Rs. 2,000 a year for three years' approved service as Chief Engineer or in any capacity on the proposed Rs. 2,250 grade.

(ii) Additional pensions of Rs. 1,000 a year for three years' approved service in the grades of Rs. 2,000 and Rs. 1,750, or as either of the two senior officers in the grade of Rs. 1,500, the Electrical Engineer-in-Chief's appointment being considered as on Rs. 1,750.

(*b*) In the case of officers appointed later than 1897—

Additional pensions of Rs. 1,000 a year to those who have rendered not less than three years of effective service as Chief Engineer; in the grades of Rs. 2,250 and Rs. 2,000; or as either of the two senior officers in the grade of Rs. 1,750.

I have already proposed that all superior officers of the Telegraph Department should retain their telegraph pay irrespective of the duties on which they are from time to time employed, and if this proposal is accepted, there is no necessity specifically to provide in the terms of Articles 642 and 643 of the Civil Service Regulations for telegraph officers holding the appointments of Postmaster-General or Deputy Director-General of the Post Office, Traffic, and it should be understood that the provisions under "Postal Department" in Article 475 do not apply to telegraph officers holding the appointments mentioned if such officers are ineligible for pensions under Articles 642 or 643 as modified above.

48. **Special additional pensions proposed for officers joining the service after amalgamation is effected.**—As regards the future I consider that the provisions in Article 643 of the Civil Service Regulations should cease to apply to officers appointed to the Telegraph Department after the amalgamation of that department with the Post Office, and that, from that date, the special additional pensions admissible to telegraph officers should be governed by the terms of Article 475 by the alteration of the sub-heading in that article from "Postal Department" to "Posts and Telegraphs" and the inclusion under the revised sub-heading of the appointments of Chief Engineer, Telegraphs, and Director, Telegraph Engineering, the Deputy Director-General of the Post Office, Traffic, thus being eligible for the extra pension of Rs. 1,000.

VIII.—POWERS.

49. **Powers of Director-General of Posts and Telegraphs.**—I recommend that, for the present, the powers of the Director-General of Posts and Telegraphs should be, as regards the Post Office and its establishments, those which have from time to time been delegated to the Director-General of the Post Office, and, as regards Telegraphs and the establishment connected therewith, the present powers of the Director-General of Telegraphs increased, in respect of the appointment of signal office clerks and telephone operators, to the extent recommended in my letter No. 221-C. T., dated the 29th July 1912. A

statement of these powers, so far as expenditure of post office and telegraph funds is concerned, is annexed to this letter (Appendix IV., Statement A). The only important difference between the powers exercised by the Director-General of the Post Office and the Director-General of Telegraphs, respectively, is in regard to the entertainment of additional establishment, and I do not consider it possible to assimilate the powers of the Director-General in this respect under the two heads until greater experience of the requirements of the Telegraph Department has been gained and trustworthy data accumulated.

50. **Powers of Directors and Superintendents, Telegraph Engineering, and Postmasters-General.**—The powers now exercised by the Circle Directors and Divisional Superintendents of Telegraphs should, I consider, be delegated to Directors and Superintendents, Telegraph Engineering, and the powers of the latter officers, where applicable, should also be exercised by the Chief Electrician, the Superintendent of Stores (or Chief Storekeeper) and the Superintendent of Telegraph Workshops. Postmasters-General should be given the powers, in respect of telegraph traffic, exercised by Directors of Telegraphs under the existing system. I recommend, however, that these powers as defined in Appendix II. to the despatch to the Secretary of State No. 153-Sals., etc., dated the 1st July 1909, should be modified, from the date on which the amalgamation of the Post Office and the Telegraph Department is effected, to the extent shown in italics in the further statement annexed to this letter (Annexure IV., Statement B). These modifications, so far as items 1, 4, 9, 13, 14, 19, 21, 26, 38 (in the case of Divisional Superintendents' powers only), 42 (in the case of the Superintendent of Workshops only), 43, 45, 48, 50, 53, 58, 60, 62, 71, 72, 75, 79, and 80 are concerned, have already been effected and the remainder are alterations which the experience gained during the last few months has shown to be necessary.

51. **Additions to powers of Postmasters-General in respect of Post Office Administration.**—I recommend that the powers mentioned in items 12, 61; and 77 of this statement should also be exercised by Postmasters-General in the local administration of the Post Office in order to bring their powers in this respect into line generally with the powers which it is proposed should be exercised by Postmasters-General in the administration of telegraph traffic.

IX.—ACCOUNTS AND BUDGET ALLOTMENTS.

52. **General procedure for the preparation of accounts and allotment of budget grants.**—I recommend that, for the present, separate accounts should be maintained for the Post Office and for the Telegraph Department, and that the budget estimate for the two departments should be prepared separately. The details of the alterations in accounts procedure that will be necessary will be settled in communication with the Accountant-General, Post Office and Telegraphs, when the orders of the Government of India on the proposals contained in this letter have been received. The general arrangement will be that Directors and Superintendents, Telegraph Engineering, will be provided with funds in respect of engineering work only, including the first fitting of offices. The balance of the funds at present allotted to Circle Directors and Divisional Superintendents which will represent establishment and contingent charges on account of the traffic staff and telegraph offices, will be placed at the disposal of the Postmaster-General. Postmasters-General will take the place of Circle Directors and Divisional Superintendents in all accounts matters pertaining to traffic management and the maintenance of telegraph offices, and the additional funds necessary for this purpose will be allotted to them from the budget grants provided under the head "Telegraphs." They will keep the separate accounts of the expenditure of these funds now maintained in the Telegraph Department, including a cash book, and will submit these accounts direct to the audit office. The re-allotment of funds to telegraph offices now effected by Circle Directors and Divisional Superintendents will be made by Postmasters-General from the grants placed at their disposal. All officers in charge of telegraph offices will send their accounts direct to the audit office as at present. Practically the whole of the telegraph expenditure controlled by Postmasters-General will be chargeable to "Revenue."

53. **Allocation of salaries of staff.**—The salaries of all officers and menials employed solely in connection with telegraph work, including the clerical establishment of the traffic branch of Postmaster-General's offices, should be debited to "Telegraphs," and should, as far as possible, be paid in such a manner that no accounts adjustments between that head and the head "Post Office" will be necessary.

The Director-General of Posts and Telegraphs and the Postmasters-General will be engaged on both postal and telegraph work and their salaries should, therefore, be debited partly to "Post Office" and partly to "Telegraphs." Under the instructions contained in Mr. Ley's letter to the Accountant-General, Post Office and Telegraphs, No. 3026–33, dated the 17th April 1912, my salary, whilst I am in charge of the current duties of the office of the Director-General of Telegraphs, in addition to my duties as the Director-General of the Post Office of India, is being divided between the heads "Post Office" and "Telegraphs" in the proportion of two-thirds and one-third, respectively, and the same proportion has been adopted for the division of the salaries of the Postmasters-General, Bombay and Central Circles, during the experimental amalgamation in those circles. On the other hand the salary of the Accountant-General, Post Office and Telegraphs, and the charges on account of his office establishment are divided between the two heads in the proportion of four-fifths and one-fifth. I am not aware of the considerations on which the latter proportion was based, but the Accountant-General informs me that considerably more than one-third of his time is taken up by telegraph work and he suggests that a proportion of two-thirds and one-third should be adopted for all cases in which a division of charge on account of salaries is necessary. In 1911–12, the gross revenue receipts of the Telegraph Department amounted to Rs. 1,42,74,275 and those of the Post Office to Rs. 3,20,40,516, and according to these figures the proportion suggested by the Accountant-General appears to be justified. It might reasonably be argued that amalgamation with the Telegraph Department should not relieve the Post Office of anything more than the cost of the revision of salaries necessitated by this measure, and this amounts to Rs. 24,983·3—22,772·5 = 2,210·8, or rather more than one-eleventh of the total of the salaries proposed in this letter for the Director-General of Posts and Telegraphs and Postmasters-General (including the two Deputy Directors-General of the Post Office of India). It is desirable, however, that the allocation should be the same in every case and it is suggested, as a fair arrangement, that the salaries of the Director-General of Posts and Telegraphs, the ten Postmasters-General and the Accountant-General, Post Office and Telegraphs, and the cost of the Accountant-General's office establishment should all be debited to "Post Office" and "Telegraphs" in the proportion of four-fifths and one-fifth, respectively.

A fixed contribution (Rs. 28,800) towards the cost to the Post Office of central, controlling and accounts offices is already made by the Telegraph Department in the grant provided by the latter for the working charges of combined offices, and this will continue to be made. No other adjustment between the accounts of the two departments appears to be necessary.

X.—CLERICAL AND MENIAL ESTABLISHMENTS.

54. **Strength and Grading of Clerical Establishment.**—The question of the clerical establishment required for the offices of the three Directors and twenty Superintendents of Telegraph Engineering and

APPENDIX I. (*continued*).

for the traffic work in Postmaster-General's offices under the scheme of amalgamation has been discussed in detail with each Postmaster-General and Circle Director and the unanimous conclusion, in which I agree, is that the existing establishments should be distributed as follows:—

Present Distribution.		Proposed Distribution.	
Bombay Circle	44	Director, Telegraph Engineering	7*
Central Circle		Postmaster-General, Bombay	12
Madras Circle	30	,, ,, Central	6
		,, ,, Madras	12
		Bombay Division	6
		Ajmere Division	5
		Nagpur Division	5
		Coimbatore Division	4
		Bangalore Division	4
		Madras Division	4
Total	74	Total	65

With the above distribution there will be a saving of 12 clerks on the present sanctioned establishment of 212 clerks shown in Statement C. of Appendix IV. to the despatch to the Secretary of State, No. 153-Salaries, dated the 1st July 1909. The reduction should, in my opinion, be made in the first instance in the lowest grade of circle and divisional office clerks on Rs. 35 a month, in order to prevent injury to the prospects of the clerks already in the service, and later it may be possible to make a proportionate reduction in the higher grades. Some additional clerical assistance will, however, be required in the majority of the offices detailed above during the transition period, and it may be found necessary to allot temporarily an additional clerk to those engineering divisions in which an attached officer has to be permanently stationed away from headquarters (for example at Quetta in the Karachi Division) I recommend, therefore, that the present sanctioned establishment of 212 clerks should remain unaltered on the understanding that it will be reduced as much, and as quickly, as circumstances will permit. The reductions effected will be reported to Government, and I anticipate an eventual saving under clerical establishment of at least 12 appointments on Rs. 35 a month representing Rs. 5,040 a year.

The appointments of the clerks allotted permanently to Postmasters-General for telegraph traffic work will be added to the sanctioned establishment of their offices, and the clerks themselves should be graded for promotion in these establishments. The appointments of the clerks allotted permanently to the offices of Directors, Telegraph Engineering (the Engineering Branch of the Postmaster-General's office in the case of the Burma Circle), and to Divisional Offices should be graded in four separate cadres under the heads of the four engineering circles, by whom promotions, postings, grant of leave, payment, &c., should be controlled in exactly the same manner as the cadres of circle and divisional office clerks are controlled by the present Circle Directors.

The clerical establishment sanctioned in Mr. Ley's letter No. 7391-91, dated the 18th October 1910, for the office of the Electrical Engineer-in-Chief should, I consider, be transferred to my office, where the greater part of the clerical work of the Electrical Engineer-in-Chief (deputations, postings and promotions of the staff of the Technical Branch) will in future be performed, and in this case arrangements will be made to supply from my office a suitable clerical staff for the Chief Electrician at Alipore. The latter officer will require the assistance of about two clerks, and a separate establishment for this purpose would not be satisfactory.

55. **Grant of concessions to clerks transferred from one station to another.**—I also recommend that, as in the case of the experimental amalgamation in

* Two of these to be transferred from the office of the existing Director of Telegraphs, Madras Circle.

the Bombay and Central Circles, any clerk, whom it may be necessary under the amalgamation scheme to transfer to another station, should be granted an advance of one month's pay recoverable in six equal monthly instalments; and that any clerk transferred over a distance exceeding 500 miles should be granted a bonus of two months' pay, subject to a maximum of Rs. 100, and on the understanding that the concession will be refused by the head of the office from which such clerk is transferred should no extra expenditure be caused to the clerk by the transfer.

56. **Distribution of menial establishments.**—As regards menial establishments arrangements will be made to provide a suitable staff of peons, etc., for the offices required under the amalgamation scheme from the establishment of the existing circle and divisional offices. The experimental amalgamation in the Bombay and Central Circles has resulted in a slight reduction in the number of office servants, and it is probable that a corresponding saving will be effected in each of the other circles, but the establishment cannot be definitely fixed until amalgamation has been effected, and the actual requirements of officers and offices are known. It is probable, however, that it will be possible under peons alone to dispense eventually with the services of twenty of the men included in the present sanctioned establishment of 163 on rates of pay varying from Rs. 9 to Rs. 15 a month.

57. **Grant of concessions to peons transferred to new stations.**—It will be necessary to transfer a certain number of divisional office peons from places at which there will be no divisional offices under the amalgamation scheme and, as such men will be entitled to one fare only of the lowest class, I recommend the grant to them of a bonus of—

(*a*) one month's pay, if the distance over which the man is transferred is not more than 500 miles, and

(*b*) two month's pay, if the distance exceeds 500 miles.

XI.—FINANCIAL EFFECT.

58. **Ultimate and immediate financial effect.**—The financial effect of the foregoing proposals, as shown in the proposition statement annexed to this letter (Annexure III, Statement D), will be an ultimate saving of about Rs. 2,98,472 a year, but this amount does not include the savings which have already been reported to the Government of India as actually effected in the Telegraph Department since the 1st April last, when the administration of that Department and of the Post Office were brought together under one Director-General, *viz.*, Rs. 12,000 a year on account of the reduction of temporary clerical establishment in the offices of Circle Directors and Divisional Superintendents and Rs. 3,828 a year in the cost of the office establishment of the Director-General of Telegraphs. Moreover, it does not take into account the savings which will be effected in travelling allowances by the reduction in the number of superior officers of the Telegraph Department and the abolition of the touring staff of the Technical Branch, the savings in the rental of office accommodation which will result from the reduction in the number of circle and divisional telegraph charges, nor the savings on account of the anticipated reduction in the permanent clerical and menial establishments sanctioned for the Telegraph Department. The first of these items of saving cannot be estimated; the second will probably exceed Rs. 15,000, the present average expenditure under this head being over Rs. 20,000 a year; the third will amount to Rs. 7,524, the rent of the buildings shown in the margin, and the last will be not less than Rs. 7,500 a year. The total ultimate saving effected by amalgamation will therefore amount to at least Rs. 344,324 a year. This sum leaves out of account the saving of Rs. 50,000 already effected this year in the printing and stationery charges of the Telegraph Department, as it cannot be definitely stated that this saving will be permanent although I have every hope that it will be so, especially as I have arranged to depute an officer for some months to reduce the number of forms and to check the waste which undoubtedly takes place in the larger telegraph offices.

	627	

Against the savings has to be placed the expenditure involved in the grant to clerks and menials of the bonus recommended in paragraphs 55 and 57 of this letter. The cost of this concession cannot be calculated, but it will probably be less than Rs. 7,000. The estimated saving will also be reduced for a number of years by additional pensionary charges on account of officers retiring prematurely under the provisions proposed in paragraph 46; by the continuation to officers now in the service of the rates of pay of ten of the existing administrative appointments referred to in paragraph 37; and by the employment, so long as the superior engineer officers are in excess of the establishment proposed for the Engineering Branch, of a number of officers whose emoluments will exceed the salaries which will eventually be attached to the traffic and minor engineering appointments in which the services of these officers have to be utilised in the manner described in paragraph 43. The effect of these three proposals cannot be estimated with any degree of accuracy, but it is certain that the adoption of my scheme for the amalgamation of the Post Office and the Telegraph Department will result in an immediate substantial saving to Government, which will increase materially as the officers now in the service retire or die.

I would explain that, in estimating the financial effect of my proposals, the average value of each appointment, under both the existing and the proposed scales, has been calculated in accordance with the usual rules except in the case of the superior service (Imperial and Provincial) of the Engineering Branch and the superior Traffic Branch. In the case of the Provincial Service of the Engineering Branch the average value of Rs.621 calculated in the enclosure to the dispatch to the Secretary of State No. 11-Sals., etc., dated the 18th January 1912, has been adopted; while in the case of the Imperial service of the Engineering Branch and in the case of the second division of the superior Traffic Branch, the average value of the time scales of pay has been calculated in a similar manner (Appendix III, Statement E) by taking the distribution of officers over each year of service according to the Life and Service tables of the Government of India. This explains why the figure now adopted for the average pay of the superior officers of the Imperial Service differs from the average value shown in Appendix IV, Statement A, to the despatch to the Secretary of State No. 153,-Sals., dated the 1st July 1909.

XII.—DATE OF EFFECT AND PROVISIONAL ARRANGEMENTS.

59. **Necessity for introduction of scheme at earliest possible date.**—In paragraph 4 of Mr. Ley's letter No. 4393–101, dated the 7th June 1912, the Government of India directed that the experimental arrangements sanctioned for the Bombay and Central Circles should remain in force until the question of their permanency had been decided. Under the scheme now recommended the Madras Circle will be linked with these circles for engineering and technical work, and it would obviously be inconvenient to make any change in the experimental arrangements in force in the latter until the orders of Government on the proposals made in this letter are received. In the case of the other six circles, however, the cessation of recruitment during the past few years has reduced the establishment of superior telegraph officers to a number considerably below that actually required, and the continuance of the present system of telegraph administration for anything more than a short period

will certainly necessitate either the resumption of recruitment for the superior staff of the Telegraph Department or the stoppage of all leave to officers of the department. Moreover the staff of both the departments under my charge are naturally extremely anxious about their future position and prospects, and it is very desirable, in my opinion, that amalgamation should be effected at the earliest possible date. I therefore strongly recommend that, if the Government of India approve generally the arrangements now proposed by me, they may be introduced from the 1st April 1913, if practicable; and that if, as seems possible, it is decided to refer my proposals on the subject of the establishment to the Royal Commission which will shortly commence their enquiries in respect of the public services in India, I may be authorised to proceed with the amalgamation of the Post Office and the Telegraph Department on the lines proposed, including the reduction of superior staff and appointments to the superior Traffic Branch on the rates of pay recommended for that branch, as a provisional arrangement subject to such alterations as regards personnel and pay as may be decided upon after consideration of the recommendations of the Commission.

60. **Period required for preliminary arrangements.**—The arrangements for amalgamation recommended in this letter are such that they can be introduced at any time without risk of dislocation of public business, and I need only request that, if the proposed amalgamation is approved, whether provisionally or permanently, the date of effect fixed by the Government of India may be one that will leave me two months in which to form an idea as to the officers of the Telegraph Department who can be permitted to avail themselves of the special terms for retirement which it is proposed to offer to officers for a certain standing, to select the most suitable of the remaining officers for the new administrative and executive charges, and to make all other preliminary arrangements.

XIII.—CONCLUSION.

61. In conclusion, I desire to express the great obligation under which I lie to the Honble. Mr. W. Maxwell, C.I.E., M.V.O. My task of administering the two departments, reorganising the Telegraph Department, and working out the scheme contained in this letter has been an extremely heavy one and, but for his efficient help, in every direction, it would not have been possible to avoid delaying this scheme so long as to promote discontent and suspicion. It is also only right that I should say that most of the details of the scheme have been devised and worked out by Mr. Maxwell from beginning to end, my share in them being confined to criticism and approval.

Mr. Ivor Thomas, M.V.O., and Mr. R. Meredith have all along been in the closest personal touch with us. They have been consulted on every detail, every point has been discussed with them at length, and their valuable counsel and assistance have been ungrudgingly given on all occasions.

I have, &c.,

C. STEWART-WILSON,

Director-General of Posts and Telegraphs.

SCHEDULE OF ENCLOSURES.

ANNEXURE I.—Letters from public bodies in Bombay and Central Circles regarding experimental amalgamation. (*Not reprinted.*)

ANNEXURE II.—Letters from Postmasters-General and Superintending Engineer, Telegraphs, Bombay and Central Circles, and from the Accountant General, Post Office and Telegraphs, regarding experimental amalgamation. (*Not reprinted.*)

ANNEXURE III.—Statements A, B, C, D, and E. General and financial effect of proposals. (A, B, C, and E *not reprinted.*)

ANNEXURE IV.—Statements A and B. Schedules of powers of Director-General of Posts and Telegraphs, Postmasters-General, and Directors and Superintendents, Telegraph Engineering, &c. (*Not reprinted.*)

S. LEVETT-YEATS.
Accountant-General, Post Office and Telegraphs.

CALCUTTA,
7th November 1912.

* One of these appointments is held vacant against a temporary appointment of Assistant Director of Traffic at the headquarters of the Director-General.

(ii) *Despatch from the Secretary of State for India, To His Excellency the Right Honourable the Governor-General of India in Council, Telegraph No. 5, dated India Office, London, 6th March* 1914.

AMALGAMATION OF THE POSTAL AND TELEGRAPH DEPARTMENTS IN INDIA.

MY LORD,

I HAVE received and very carefully considered in Council the letter from Your Excellency's Government, No. 324, Finance, of the 30th October last, submitting for my approval a scheme for the permanent amalgamation of the postal and telegraph departments in India.

2. I agree with your Government that the proposals have been formulated by Sir Charles Stewart-Wilson with great thoroughness and mastery of the subject, and, subject to the following observations, I sanction them. I have already communicated to you my general approval of them in my telegram quoted in the margin.*

3. There are certain matters referred to in the 16th paragraph of your letter, such as the Director-General's proposals regarding the financial powers of certain officers and regarding clerical and menial establishments which you state that you have not yet fully considered. I am willing that you should deal separately with these matters so far as they are within your powers, but for such as may be beyond those powers I will await your specific recommendations.

4. You also state in paragraph 5 that the new scheme will make necessary some slight amendments in the Post Office and Telegraph Acts, and that these will be undertaken in due course. You further promise (paragraph 8) in connection with the proposals for the staff at headquarters that you will examine the position afresh after two years' time with a view to considering whether any reduction can then be effected. I will await your report on the result of this examination.

5. In paragraph 13 you refer to the question of recruitment, and your recommendations in the matter are provisional, and subject to the result of the inquiries of the Public Services Commission. It is on this understanding that my sanction is given.

6. In paragraph 14 you request sanction to the continuance as part of the Telegraph Establishment of the appointment of a Royal Engineer Officer for the charge of wireless stations in India. I approve this arrangement.

7. The proposals summarised in paragraph 12 of your letter for determining the future salaries of officers at present in the Department appear to me adequate if not generous; and I consider that promotions to a higher rate of pay according to the scale proposed should be subject to the continued efficiency of the officer in question, and that if an officer has been passed over for an appointment which if held by an officer not at present in the service would be paid at Rs. 1,750—2,000, he should not be allowed to draw higher pay than Rs. 1,750, unless subsequently promoted.

8. In respect of compensation pensions, it will no doubt be your intention that inefficient officers should be compulsorily retired under the ordinary rules and should not be considered entitled to the additional pensions now proposed. In reference to the proposal that officers desirous of accepting the special terms of retirement should be allowed to take any leave they may have to their credit, I have no objection provided that the compensation pension is that due in respect of the age of the officer in question when he actually retires.

9. While agreeing to your proposals for the special pensions of Rs. 2,000 and Rs. 1,000 to officers at present in the service, I desire that the qualification of "approved service" should be strictly insisted upon, and that no officer who has been passed over for promotion from the Rs. 1,750 grade, and no officer in that grade at the end of his service who is not declared by the Director-General to be fitted for promotion, should be considered entitled to the special pension.

10. Referring to the statement in the twelfth paragraph of your letter that it is hoped to find employment for one of the redundant officers in a State Railway Telegraph appointment, I desire that the advantage of such transfers should carefully be borne in mind so long as the redundancy of officers continues.

11. Finally, I take note of the belief you express that the amalgamation of the Post Office and Telegraph Departments will not excite serious opposition and discontent among the members of either Department, and I trust that this will be found to be the case.

I have the honour to be,
My Lord,
Your Lordship's most obedient
humble servant,
(Signed) CREWE.

* *From Secretary of State to Viceroy, Finance Department, 17th February* 1914.

Your Despatch, dated 30th October, No. 324, Post Office and Telegraph Department. I sanction introduction of scheme from 1st April next, subject to modification that special pensions granted to officers under paragraph 12, clause 1, of your letter shall be determined by their age on actual retirement, and subject also to my further orders regarding pay of Chief Engineer and appointments which are to qualify for special pensions under Articles 642 and 643, Civil Service Regulations.

(iii) *Government of India Resolution No.* 3062—3066-101 (*Department of Commerce and Industry, Post and Telegraph Establishments*), *dated Simla, the 24th April* 1914.

In the Resolution of the Government of India in the Department of Commerce and Industry, No. 830-833, dated the 24th January 1912, it was announced that, as a preliminary step in the direction of the ultimate amalgamation of the postal and telegraph services in India, the administration of the two existing Departments of Posts and Telegraphs, would, as an experimental measure, be brought together under one head. It was further decided that a single officer of tried administrative capacity should be entrusted with the duty of formulating and carrying out an experimental scheme for the fusion of the two services. Sir Charles Stewart-Wilson, who was then Director-General of the Post Office of India, was selected to hold charge of the combined office of Director-General of Posts and Telegraphs with effect from the 1st April 1912.

2. The scope of the experimental scheme devised, with the assistance of the Honourable Mr. Maxwell, C.I.E., M.V.O., by Sir Charles Stewart-Wilson, and sanctioned by the Government of India, was restricted to the Bombay and Central Postal and Telegraph Circles. It was introduced with effect from the 1st July 1912, and has continued in force since that date.

3. The main principles of the scheme referred to above, and the question of its extension to the whole of India as a permanent measure, were fully discussed with numerous officers of all ranks of the two departments and with members of the commercial community. Expressions of opinion on the experiment were also invited from the general public. Opinion, both official and non-official, has been uniformly and thoroughly favourable. The Government of India have therefore had no hesitation in concluding that the experiment has yielded a full measure of success. Accordingly, with the assent of His Majesty's Secretary of State for India, they have decided that the system which has been in force in the Bombay and Central Postal and Telegraph Circles since the 1st July 1912, shall, sub-

APPENDIX I. (*continued*).

ject, particularly in Burma, to certain modifications in minor matters of detail, be finally adopted throughout British India with effect from the 1st April 1914.

4. It was explained in the Resolution of January 1912, referred to above, that the amalgamation of the two services in question involved a complete separation of the Engineering from the Traffic work of the Telegraph Department. The following details indicate the manner in which this is to be effected :—

I. The appointment of Director-General of Telegraphs will be finally abolished, and that of Director-General of Posts and Telegraphs, which was tentatively created with effect from the 1st April 1912, will become a permanency. The pay of the Director-General will be Rs. 3,500 rising by annual increments of Rs. 100 to Rs. 4,000 a month, and he will not be entitled to exchange compensation allowance.

II. At Headquarters the Director-General of Posts and Telegraphs will be assisted in the administration of the telegraph service by the following staff of officers :—

1 Chief Engineer of Telegraphs.
1 Superintendent of Telegraph Engineering as Personal Assistant to the Director-General.
1 Superintendent of Telegraph Engineering as Assistant to the Chief Engineer.
1 Deputy Director-General of Telegraph Traffic.
1 Officer of the first division of the superior Traffic branch which will now be formed, as Assistant Director-General of Telegraph Traffic.
1 Officer of the second division of the superior Traffic branch as Assistant to the Deputy Director-General of Telegraph Traffic.

The tenure of the appointments of Personal Assistant to the Director-General and Assistant to the Chief Engineer will ordinarily be limited to three years.

III. The appointment of Electrical Engineer-in-Chief will be abolished, but three engineering officers will be provided to assist and advise the Director-General and the Chief Engineer in special technical matters, to carry on research work and test instruments in the Store Yards at Alipur, to conduct classes for instructions in technical matters, and to hold technical examinations. Two of these officers will be of the same rank as Superintendents of Telegraph Engineering, and will be designated "Chief Electrician" and "Assistant Electrician" respectively, while the third officer will be of the rank of Assistant Superintendent of Telegraph Engineering, and will be designated "Assistant Electrician." The services of an officer of the Royal Engineers will continue to be placed at the disposal of the Director-General of Posts and Telegraphs so long as required.

IV. The administrative control of the telegraph engineering work will comprise four charges, namely :—

(*a*) The Bombay Postal Circle (less the late Karachi Telegraph Division), and the Central and Madras Postal Circles.
(*b*) The Punjab Postal Circle (with the addition of the late Karachi Telegraph Division), and the United Provinces Postal Circle.
(*c*) The Bengal and Assam and the Bihar and Orissa Postal Circles (which take the place of the Bengal and the Eastern Bengal and Assam Postal Circles).
(*d*) The Burma Postal Circle.

The three first-named charges will be placed under officers of the standing of the present Directors of Telegraph Circles. These three officers will be styled "Directors, Telegraph Engineering." They will control the entire engineering staff within the limits of their charges, and will be responsible not only for the design, construction, and maintenance of telegraph and telephone lines, but also for the first fitting of telegraph offices, the fitting up and working of telephone exchanges, the erection and maintenance of power plant, and all other circle work which at present devolves on the Electrical Engineer-in-Chief. The administrative control of telegraph engineering in the Burma postal circle will be placed in the hands of the Postmaster-General, who will, for the present, be one of the surplus telegraph officers referred to in paragraph 8 of this Resolution. This circle cannot conveniently be linked for engineering purposes with any of the other provinces; its postal and telegraph work is at present comparatively light, and can all be undertaken by one officer with engineering knowledge, while the engineering duties alone would not justify the employment of an administrative engineering officer.

V. Directly subordinate to the Engineering administrative officers, there will be 20 charges, in each of which the Engineering work will be under the control of an officer of the same standing as a Divisional Superintendent of Telegraphs under the present system of administration, assisted by a sufficient staff of junior officers (Assistant and Deputy Superintendents). The officers holding these charges will be designated Superintendent, Telegraph Engineering. They will occupy, in regard to Engineering and Technical work, exactly the same position as that now held by Divisional Superintendents of Telegraphs in respect of Engineering and Traffic work. In Burma they will, in addition to their Engineering duties, continue to be responsible, as explained in VII. below, for some of the Traffic work which in other Circles is to be separated entirely from Engineering duties. The designations of officers appointed to assist the Superintendents, Telegraph Engineering, will be, for officers of the superior service, Assistant Superintendent, Telegraph Engineering, and for upper subordinates, Deputy Superintendent, Telegraph Engineering. The sanctioned staff of such officers will consist of 17 Assistant Superintendents and 37 Deputy Superintendents. Four more Deputy Superintendents, Telegraph Engineering, will be employed as Personal Assistants to Directors of Telegraph Engineering and the Postmaster-General, Burma, six in the Store Depôts at Alipore, Rangoon, Bombay, and Madras, and 11 as a special staff, from which three will be allotted to each of the Directors of Telegraph Engineering, and two to the Postmaster-General, Burma, for employment on special works. The time scales of pay now in force for the superior establishment of the Telegraph Department will be retained for Superintendents and Assistant Superintendents of Telegraph Engineering; but in the case of efficient officers already in the service, the condition will be waived that no officer shall draw more than the pay of the 11th year of service unless he holds a divisional charge or a charge which is recognised as of equal importance.

VI. The greater part of the duties hitherto assigned to the superior staff of the Technical branch will be transferred to the Engineering branch, and the Technical branch will in future consist only of the Deputy Superintendents and subordinates employed in the branch. The number of Deputy Superintendents will be increased from six to seven. Their designation will be changed to Deputy Superintendents—Telegraphs (Technical), and they will be employed, two at Headquarters under the orders of the Chief Electrician, and one each in the Bombay, Madras, Calcutta, Lahore, and Rangoon Telegraph offices under the orders of the Directors—Telegraph Engineering (in Burma, the Postmaster-General). The present sanctioned staff of 34 subordinates, styled Technical Telegraph Master or Telegraphist, will remain unaltered.

VII. Traffic work will be controlled at Headquarters, under the Director-General, by the Deputy Director-General of Telegraph Traffic referred to under sub-paragraph (II.) above; and the Traffic work which has hitherto been performed by Directors and Divisional Superintendents of Telegraphs will pass to the control of the Postmasters-General in charge of the eight existing Postal Circles. Each Postmaster-General will be given the services, for Telegraph Traffic work, of an officer of about the standing of a Deputy Postmaster-General, with the following staff of Assistants :—

Bombay Circle	3
Central Circle	2
Madras Circle	3
Punjab Circle	3
United Provinces Circle	2

Bengal and Assam Circle - - -	4
Bihar and Orissa Circle - - -	1
Burma Circle - - - -	1

By Traffic work is meant the disposal of all questions connected with the establishment of Government Telegraph Offices, whether departmental or combined, the supervision and control of all telegraph work performed inside such offices excepting the maintenance of wireless and other telegraph apparatus (such as Baudot, Wheatstone, repeaters, &c.), and the testing of lines in offices in which Technical branch men are not permanently employed. In the Burma Circle some Traffic duties will devolve on officers of the Engineering Branch. These officers will be required to inspect all departmental telegraph offices in that Province except Rangoon (with its local departmental offices), Mandalay, Moulmein, and Bassein, and to submit to the Traffic Branch of the Postmaster-General's office the inspection reports on these offices.

VIII. To provide a suitable staff of officers to control the larger telegraph offices and to assist the Director-General of Posts and Telegraphs and Postmasters-General, a separate superior Traffic Branch will be created consisting of the following 40 appointments :—

(*a*) Deputy Director-General of Telegraph Traffic, pay Rs. 1,750—50—2,000.

(*b*) Superior Traffic Branch, First Division :—

8 Deputy Postmasters-General, Traffic.*

3 Superintendents in charge of the Calcutta, Bombay, and Madras Telegraph Offices.*

1 Assistant Director-General of Telegraph Traffic.*

(*c*) Superior Traffic Branch, Second Division :—

2 Assistant Superintendents in the Calcutta and Bombay offices.†

19 Superintendents of Post Offices, Traffic, as Assistants to Deputy Postmasters-General, Traffic.†

5 Superintendents in charge of the Agra, Rangoon, Karachi, Lahore, and Delhi telegraph offices.†

1 Assistant to the Deputy Director-General of Telegraph Traffic.†

Eventually this branch will consist of specially selected and trained traffic officers, and will be recruited as far as possible from subordinates selected at any stage of their service. All officers appointed to the second division of the branch, excluding the superior officers referred to below, who will draw travelling allowances at the rates at present admissible for Superintendents or Assistant Superintendents of Telegraphs, will be treated as officers of the first class for purposes of the travelling allowance regulations the daily allowance admissible being that prescribed in Appendix 25 of the Civil Service Regulations for Superintendents of Post Offices, viz., Rs. 4 a day.

To commence with, 21 appointments in the superior Traffic Branch will be filled by superior officers now serving in the Telegraph Department, who would otherwise form a surplus owing to the reduction of the establishment of Directors, Superintendents, and Assistant Superintendents of Telegraphs. Such officers will serve on the pay to which they would have been entitled if they had been employed in the Engineering Branch, and will remain, except in very special circumstances, in the superior Traffic Branch, but, as far as possible, the selections for this branch will be made with the consent of the officers. Officers so selected will be granted all increments under the existing time scale of pay for Superintendents and Assistant Superintendents of Telegraphs as they become due, provided their work is satisfactory, and the rule under which an officer is not permitted to go beyond the pay of the 11th year of service, unless he is in charge of a division or its equivalent, will be waived in their case. Officers belonging to the superior establishment of the Telegraph Department who are employed as Assistants to Deputy Postmasters-General, Traffic, will be designated Assistant Postmasters-General, Traffic.

5. The distribution and ultimate strength, pay, allowances, &c. of the staff of superior officers and upper subordinates sanctioned for telegraph work, will be as shown in the Annexure to this Resolution. The ultimate effect of the decisions set forth in the preceding paragraph will be the substitution of a staff of 46 Telegraph Engineers for the existing establishment of 96 superior Telegraph officers (excluding the Superintendent of Workshops and the Chief Storekeeper); the reduction of the establishment of Deputy Superintendents, Telegraph Engineering (hitherto termed Deputy Superintendents, General), from 72 to 58; the increase of the establishment of Deputy Superintendents, Technical, by one appointment; the reduction by five of the establishment of Deputy Superintendents, Traffic, employed in Telegraph offices, caused by the removal from this cadre of the appointments of Assistant Director of Traffic (temporary) and of Deputy Superintendents in charge of the Rangoon, Karachi, Lahore, and Delhi offices; and the creation of a new superior Traffic Branch consisting of 40 appointments; in all a net reduction of 28 appointments.

6. The establishments now sanctioned do not include leave reserves. In the case of the Engineering Branch the total number of officers present on duty will always be maintained at sanctioned strength by the appointment, when necessary, of additional Deputy Superintendents in the lowest grade to take the place of superior officers absent on leave, &c. Deputy Superintendents will not, however, be appointed to officiate as Assistant Superintendents. Temporary vacancies in the superior Traffic Branch caused by the absence of officers on leave, &c., will be filled by officiating appointments to that Branch, and any vacancies caused by such appointments will be filled in the usual manner.

7. On the Post Office side the only officers directly affected by the scheme of amalgamation herein described are the Postmasters-General. A revision of their pay has already been under contemplation. In view of their increased work and responsibility under the amalgamation scheme, it has been decided to adopt the following scale of pay of these officers, to whom no exchange compensation allowance will be admissible in future :—

	Rs.
2 appointments on - -	2,500 a month.
2 „ „ - -	2,250 „
3 „ „ - -	2,000 „
3 „ „ - -	1,750 „

The pay of these grades will be attainable by any officer holding the appointment of Postmaster-General, whether he be a member of the Indian Civil Service or promoted from the ranks of departmental postal officers. Officers of the Telegraph Department appointed to be Postmaster-General will continue to draw the pay to which they would ordinarily be entitled on the scales laid down for Telegraph officers.

8. The reductions in establishment referred to in paragraph 5 above cannot be effected at once owing to the pledge which has been given by the Government of India that in such steps as may be taken towards the amalgamation of the two services all possible protection should be afforded to the personal interests and prospects of the existing staff of both Departments in all grades. The reductions in the establishments of Upper Subordinates will be made in the lowest grades, and will be effected at once, without detriment to the prospects of subordinates, by the transfer of 18 Deputy Superintendents from the present General and Traffic Branches to the superior Traffic Branch, and the temporary employment of three Deputy Superintendents, General, in vacancies in the revised cadres of Deputy Superintendents, Technical and Traffic. The surplus staff will be confined entirely to the superior establishment. Of this surplus 21 officers will be employed in the Superior Traffic Branch in the manner described in paragraph 4 (VII.) above; one will be employed as Chief Storekeeper, and one as Assistant to the Chief Storekeeper; one will be employed as Postmaster-General, Burma, and another will be employed as

* First grade, two on Rs. 1,200—40—1,400; second grade, four on Rs. 1,000; third grade, six on Rs. 800.

† On a time scale of pay rising from Rs. 250 by annual increments of Rs. 15 to Rs. 400 and thereafter by annual increments of Rs. 20 to Rs. 600 a month.

APPENDIX I. (*continued*).

Postmaster-General in some other circle as soon as a leave vacancy occurs which would not in the ordinary course be filled by a departmental officer of the Post Office. Other excess officers, who will mainly be officers on leave, will be treated as supernumerary to the sanctioned superior establishment of the Engineering Branch. To reduce this excess as rapidly as possible, the following rates of pension and leave concessions are offered as a special concession to senior officers in the Department:—

(I) All efficient officers of the Telegraph Department who have on the 1st April 1914 served for 18 years, of which not less than 16 years have been spent on active service, are eligible for retirement from the Department. Pension on the following scale will be granted to those officers whose resignation may be accepted:—

(*a*) The pension which would be due under existing rules if the officers concerned were retiring on medical certificate.

(*b*) An additional pension calculated at the following rate—

	Per annum. Rs.
To officers under 50 years of age -	1,000
To officers in their 51st year - -	900
,, ,, 52nd ,, - -	800
,, ,, 53rd ,, - -	500

Provided that the resignation of the officers concerned is submitted to the Government of India within six months from the date of this resolution.

(II) When an officer has tendered his resignation through his superior officer, it is obligatory that the application should be submitted for the orders of the Government of India, and it cannot be cancelled except with the approval and sanction of Government.

(III) The Governor-General in Council reserves the right to accept or to refuse any application for retirement under these terms, or to postpone the date on which such retirement is to take effect, according to the interests of the public service.

(IV) Officers taking advantage of these concessions will be admitted to any leave that may be due to them preparatory to retirement, but the compensation pension granted will be that due in respect of the actual age on retirement.

9. There are at present 11 superior appointments of which the pay exceeds Rs. 1,250, and to which officers now in the service could reasonably have expected promotion under the present system. It will be seen that, in place of these, only five superior administrative appointments have been provided. In order to safeguard the interests of officers now in the service, and at the same time to guard against unduly rapid promotion consequent on the reduction in the cadre which the concessions mentioned in the last paragraph are expected to effect, it has been decided to adopt the following scale for all officers serving in the Telegraph Department on 31st March 1914.

Number of Appointments.	Rate of Pay.	Condition of Appointment.	
		Permanent.	Officiating.
1	Rs. 2,750 - -	No condition -	No condition.
1	Rs. 2,250 Imperial. / Rs. 1,800 Provincial.	Not less than 30 years' service.	Not less than 27 years' service.
2	Rs. 2,000 Imperial. / Rs. 1,600 Provincial.	Not less than 27 years' service.	Not less than 24 years' service.
4	Rs. 1,750 Imperial. / Rs. 1,400 Provincial.	Not less than 24 years' service.	Not less than 22 years' service.
3	Rs. 1,500 Imperial. / Rs. 1,200 Provincial.	Not less than 22 years' service.	Not less than 20 years' service.

The first appointment is that of Chief Engineer and is unconditional. The remaining appointments will be held, irrespective of the duties performed, by officers who have the necessary qualifying service. If a vacancy (whether permanent or officiating) in this scale cannot be filled owing to the next senior qualified officer being ineligible by length of service, the remaining vacancies in the chain will still be filled as though he had been promoted. For the purposes of this scale temporary officers who have been taken on to the permanent cadre will date their service from the time of joining the permanent establishment. This scale will continue in force as long as there remain in the Department any officers now in service who would, but for the amalgamation, have risen to enjoy the rates of pay hitherto admissible to the officers now holding the 11 administrative appointments in question. Promotions to a higher rate of pay according to the scale prescribed above will be subject to the continued efficiency of the officer in question.

10. All officers in receipt of pay at the rate of Rs. 1,500 and upwards, or the Provincial Service equivalent, will be eligible, irrespective of the duties on which they are employed, for daily allowance at the rate of Rs. 7.8.0 a day prescribed for Directors of Telegraphs in item 46 of Appendix 25 to the Civil Service Regulations.

11. Subject to any changes which may be necessary as the result of the inquiries instituted by the Royal Commission on the Public Services in India, the following principles will be observed in the recruitment of officers for the superior telegraph appointments. For the Engineering Branch, approximately one-half of the superior staff will be recruited from England, one-fourth in India, and the remaining one-fourth by promotion from the subordinate ranks; that is to say, ordinarily one officer will be recruited from England annually, the second vacancy in each year being filled alternately by the appointment direct to the Provincial Service of a candidate selected in India and by promotion to that service of a selected subordinate. In the case of the superior Traffic Branch the majority of the appointments will be filled, as the surplus staff of officers belonging to the present superior and upper subordinate establishments is exhausted, by the selection of specially qualified officers from the upper subordinate and subordinate staff of the Department. In order, however, to guard against the possibility of a dearth of suitable officer for the highest Traffic appointments, and with a view to obtaining when necessary from other sources, including other telegraph administrations, the services of officers possessing special qualifications, the Director-General will be at liberty to make direct appointments to the superior Traffic Branch from outside the ranks of the signalling establishments at any position in the scale which may be considered suitable. Deputy Superintendents, Telegraph Engineering, will be recruited in exactly the same manner as the present Deputy Superintendents, General, except that subordinates of the Technical Branch as well as Inspecting Telegraph Masters and Inspecting Telegraphists will be eligible, if qualified, for selection as Deputy Superintendents, Telegraph Engineering.

12. The introduction of the scheme described above will necessitate a redistribution of the clerical and menial establishments of the present Telegraph Department. Any clerk whom it may be necessary to transfer to another station will be granted an advance of one month's pay recoverable in six equal instalments, and any clerk transferred over a distance exceeding 500 miles will be granted a bonus of two month's pay, subject to a maximum of Rs. 100, provided that it is shown that the clerk has actually incurred extra expenditure owing to his transfer. Ultimately certain reductions will be effected in the strengths of the clerical and menial establishments, but their extent cannot at present be determined. In any case due regard will be paid to the interests of men now in the service. The appointment of the clerks allotted permanently to Postmasters-General for Telegraph

Traffic work will be added to the sanctioned establishment of their offices, and the clerks themselves will be graded for promotion in these establishments. The appointments of the clerks allotted permanently to the offices of Directors, Telegraph Engineering (the Engineering Branch of the Postmaster-General's office in the case of the Burma Circle) and to the Divisional Offices will be graded in four separate cadres under the heads of the four Engineering Circles, by whom promotions, postings, grant of leave, payment, &c., will be controlled in exactly the same manner as the cadres of Circle and Divisional Office clerks are controlled by the present Circle Directors. The clerical establishment sanctioned for the office of the Electrical Engineer-in-Chief will be transferred to the Director-General's Office, where the greater part of the clerical work of the Electrical Engineer-in-Chief will in future be performed, and arrangements will be made to supply from the Director-General's Office a suitable clerical staff for the Chief Electrician at Alipore.

13. The headquarters of officers in the Traffic Branch, except in the cases of officers employed in telegraph offices, will be the headquarters of the Director-General or the Postmaster-General, as the case may be. In the case of the Engineering Branch, the headquarters of the Chief Engineer and his Assistant and of the Personal Assistant to the Director-General of Posts and Telegraphs will be those of the Director-General. All the officers employed at the headquarters of the Director-General will, as at present arranged, accompany the Government of India to Simla every year, with the exception of the Assistant to the Chief Engineer and either the Assistant Director-General of Telegraph Traffic or the Assistant to the Deputy Director-General of Telegraph Traffic. The headquarters of the three Directors of Telegraph Engineering will be fixed at Bombay, Lahore (ultimately Delhi), and Calcutta, and those of the Divisional Superintendents of Telegraph Engineering at the following places:—

1. Bombay, Central and Madras Circle—(*a*) Bombay; (*b*) Ajmere; (*c*) Nagpur; (*d*) Trichinopoly for the present, but Coimbatore when office accommodation is available; (*e*) Balgalore; and (*f*) Madras.
2. Punjab and United Provinces Circle—(*a*) Karachi; (*b*) Delhi; (*c*) Lahore; (*d*) Lucknow; and (*e*) Allahabad.
3. Bengal and Eastern Bengal and Assam Circle—(*a*) and (*b*) Calcutta; (*c*) Darjeeling; (*d*) Dacca; and (*e*) Shillong.
4. Burma—(*a*) Rangoon; (*b*) Akyab; (*c*) Maymyo; and (*d*) Mandalay.

The area of the divisions generally will be greatly increased under this scheme. It will, therefore, probably be necessary in the majority of divisions to station at least one attached officer to the Engineering Branch at some place other than the Headquarters of the Division. These postings will be left to the Director-General of Posts and Telegraphs to be made according to actual requirements in each case.

14. Under Articles 642 and 643 of the Civil Service Regulations certain officers of the Telegraph Department, in accordance with present orders, are eligible for certain special additional pensions. The reorganisation of the Department and the abolition of certain posts render a revision of these orders necessary. It has accordingly been decided that additional special pensions shall continue to be admissible as follows to officers who were eligible for special additional pensions under Articles 642 and 643:—

(*a*) In the case of officers appointed not later than 1897—

(i) Additional pensions of Rs. 2,000 a year for three years' approved service as Chief Engineer or in any capacity on the Rs. 2,250 grade.

(ii) Additional pensions of Rs. 1,000 a year for three years' approved service in the grades of Rs. 2,000 and Rs. 1,750, or as either of the two senior officers in the grade of Rs. 1,500, the Electrical Engineer-in-Chief's appointment being considered as on Rs. 1,750.

(*b*) In the case of officers appointed later than 1897—

Additional pensions of Rs. 1,000 a year to those who have rendered not less than three years of effective and approved service as Chief Engineer in the grades of Rs. 2,250 and Rs. 2,000, or as either of the two senior officers in the grade of Rs. 1,750.

(*c*) No officer who has been passed over for promotion from the Rs. 1,750 grade, and no officer in that grade at the end of his service who is not declared by the Director-General to be fitted for promotion, will be considered entitled to the additional special pensions referred to above.

15. The terms stated in the preceding paragraph are applicable to those officers who were employed in the Telegraph Department on the 31st March 1914, and who are eligible to attain to the special rates of pay mentioned in paragraph 9 above. The grant of additional special pensions to officers appointed subsequently to that date in the posts of Chief Engineer, Telegraphs, Director, Telegraph Engineering, and Deputy Director-General, Telegraph Traffic, will be governed by the provisions of Article 475 of the Civil Service Regulations.

16. The scheme of amalgamation above described closely resembles the systems in force in the United Kingdom, Holland, Belgium, and Italy, where Engineering and Traffic Officers are as far as possible employed solely on duties for which they are recruited and specially trained, and it is believed that a threefold advantage will accrue therefrom. From the point of view of the State, the redistribution of duties, and in particular the abolition of dual control in combined offices, will undoubtedly result in increased economy and efficiency. The public at the same time will reap the advantage of the greater telegraph and telephone facilities which may be expected to result from the increased efficiency of the administration. Finally, the scheme not only assures adequate protection of their prospects to all Telegraph officers now in service, but it also offers them a more congenial range of duties, while affording, for the first time, to competent subordinates a prospect of advancement to well-paid appointments. The Governor-General in Council desires to take this opportunity of expressing his very high appreciation of the manner in which Sir Charles Stewart-Wilson and the Hon. Mr. Maxwell have dealt with the many important and difficult problems involved in the formulation of the scheme of amalgamation now finally approved. In the opinion of the Government of India the scheme adequately provides for the interests of the officers of both Departments while affording an improved service to the public, combined with an ultimate saving in annual expenditure.

APPENDIX I. (*continued*).

ANNEXURE.

Statement showing the Designation of, and other Particulars relating to, the Appointments of Officers to be employed exclusively on Telegraph Work.

Designation.	Number of Appointments.	Rate of Pay.	Local or other Allowances.	Remarks.
Engineering and Technical Branches.		Rs.		
Chief Engineer, Telegraphs - -	1	2,750		
Director, Telegraph Engineering -	1	2,000		
" " " -	2	1,500		
Superintendent, Telegraph Engineering (including Chief Electrician, and one Assistant; also the Personal Assistant to the Director-General, and the Assistant to the Chief Engineer).	24	380—40—700—50—1,250 (Imperial Service) 21 appointments.	Rs. 100 each, as local allowances for the Chief Electrician and his senior Assistant, the Personal Assistant to the Director-General, and the Assistant to the Chief Engineer.	
Assistant Superintendent, Telegraph Engineering.	18	250—25—450	Rs. 50 as local allowance for the Junior Asssistant Electrician.	
		500—35—850 (Provincial Service) 21 appointments.		
One officer of the Royal Engineers for work in connection with the Wireless Telegraph Stations in India.	1	*	- - - - - -	*On scale of pay admissible to Royal Engineer Officers employed in the Public Works Department.
Superintendent of Telegraph Workshops.	1	700—50—1,250		
Chief Storekeeper - - - -	1	600—40—800		
Deputy Superintendent, Telegraph Engineering.	8	400—25—500	Rs. 50 each, as local allowances for the Personal Assistants to the three Directors, Telegraph Engineering, and the Postmaster-General, Burma Circle.	
" " "	16	325—15—400		
" " "	34	250—15—325		
" " "	1	400—25—500		
Deputy Superintendent, Technical -	2	325—15—400		
" " " -	4	250—15—325		
" " " -				
Traffic Branch.				
Deputy Director-General, Telegraph Traffic.	1	1,750—50—2,000		
Deputy Postmasters - General, Traffic.	2	1,200—40—1,400		
Superintendent(s), Calcutta, Bombay, and Madras Offices.	4	1,000		
Assistant Director-General, Telegraph Traffic.	6	800	Rs. 150, as local allowance for the Assistant Director-General, Telegraph Traffic.	
Assistant to the Deputy Director-General, Telegraph Traffic - -	27	250—15—400, 400—20—600.	Rs. 100, as local allowance for Assistant to the Deputy Director-General, Telegraph Traffic.	
Superintendent(s), Agra, Karachi, Rangoon, Lahore, and Delhi offices - - - - -				
Superintendent(s) of Post Offices, Traffic, in offices of Postmasters-General - - - - -				
Assistant Superintendent(s), Calcutta and Bombay offices - -				
Deputy Superintendents of Telegraphs, Traffic in other offices not named above.	8	400—25—500

" " "	27	250—15—325		

APPENDIX II.

(*Referred to in paragraph* 75,187—*Mr. Maxwell's Evidence.*)

EXTRACT from THE GAZETTE OF INDIA, dated September 20th, 1913, regarding the POST OFFICE GUARANTEE FUND.

The Hon'ble Mr. Abbott asked :—

Is there a fund termed "The Guaranteed Fund" accumulated from the earnings of the employees of the Postal Department?

"Will the Government be pleased to state what the present value of this Fund is?

"Is it a fact that it has become so unwieldy, that a new Fund has had to be opened to divert some of the accumulations for the better handling of the same?

"Will Government kindly say what it is proposed to do with this sum of money?

"Will the Government kindly say if to its knowledge a similar Fund exists in any other country in the world?"

The Hon'ble Mr. Clark replied :—

Owing to the length of the answer to this question, the information required is laid on the table in the form of a statement :—

(1) There is a Fund called the "Post Office Guarantee Fund" which was started on the 1st January 1883 with the sanction of the Government of India. The following subscriptions were required to be paid by persons employed by the Post Office in appointments below the grade of Deputy Postmaster-General :—

(i) By superior servants excluding postmen and village postmen—the sum of one rupee half-yearly.

(ii) By postmen or village postmen, whether superior or inferior servants, and by inferior servants drawing monthly salaries of more than Rs. 5 (subsequently raised to Rs. 7)—the sum of eight annas half-yearly.

(iii) By inferior servants drawing monthly salaries of Rs. 5 (subsequently raised to Rs. 7) and less, and by any person receiving allowances of Rs. 5 (subsequently raised to Rs. 7) and less from the Post Office, —the sum of four annas half-yearly.

These rates of subscriptions were reduced by one-half in 1894 and the collection of subscriptions to the Fund has been suspended altogether since 1905. Thus a large proportion of the officials now in the service of the Post Office have never subscribed to the Fund.

This Fund took the place of another Fund known as the "Post Office Security Fund," which was established on the 1st April 1873. The latter was of the nature of a Departmental Mutual Society and provided for the realization of enforced subscriptions from persons in the employ of the Post Office, in lieu of the Security which they had previously been required to furnish. Subscriptions from the pensionable class were returnable on resignation or death of subscribers in the proportion borne by the surplus income to the total income of the Fund, but subscriptions from the non-pensionable class were not returnable at all.

Having regard to the serious pecuniary responsibilities devolving on postal employés owing to the introduction of the insurance, money order, value-payable and Savings Bank branches of business, it was decided, in December 1882, *that the return of subsequently paid subscriptions should be stopped.* This necessitated the institution of the Guarantee Fund on the 1st January 1883.

(2) The balance of the Guarantee Fund on the 31st March 1913 was Rs. 11,09,372-8-0. Of this sum Rs. 7,82,300 was held in Government Securities, the market value of which on that date was Rs. 7,46,118-10-0.

(3) The Fund, which was started in 1873, was replaced by the Post Office Guarantee Fund in 1883 as explained in paragraph 1, but not for the reasons given in the question. The Guarantee Fund has not become unwieldy nor has any new Fund been opened.

(4) The proceeds of the Fund were originally intended to be applied to the making good, up to a prescribed limit, of losses caused to Government by the neglect or misconduct of any person in the employ of the Post Office and to the cost of keeping the accounts of the Fund. The limits referred to were, at first, Rs. 1,500 in the case of "Superior" servants and Rs. 750 in the case of "Inferior" servants, but these were subsequently increased to Rs. 3,000 and Rs. 1,500 respectively. In view of the prosperous condition of the Fund, it was decided, from time to time, to allow the proceeds to be utilized also for other objects, namely :—

(i) The payment of rewards for furnishing information in Post Office robbery cases, and for specially honest and courageous service on the part of any persons in the employ of the Post Office while in the discharge of their duties.

(ii) The grant of compensation (not exceeding one month's pay) to servants of the Post Office for loss of their private property.

(iii) The payment to certain classes of officials of the Post Office of the actual travelling expenses incurred by them in their journeys to the head-quarters of the district in which they are stationed to be examined by the Civil Surgeon for Postal Life Insurance.

(iv) The payment of rewards to the subordinate staff of the Simla-Kalka line (now abolished).

(v) The payment of gratuities in very special circumstances, to the families of deserving Post Office servants left in indigent circumstances by the premature death of the individuals upon whom they depend for their support, and to Post Office officials who are, owing to no fault of their own, physically or mentally incapacitated for further service before they have earned pension. During the current year the sum of Rs. 3,733 has been already sanctioned on this account.

It is not proposed, at present, to utilize the money for purposes other than those mentioned.

(5) It is not known whether a similar Fund exists in any other country.

APPENDIX III.

LETTER from the DIRECTOR-GENERAL of POSTS and TELEGRAPHS to the JOINT SECRETARIES, ROYAL COMMISSION on the PUBLIC SERVICES in INDIA, No. 168 P.G., dated Calcutta, 11th March 1914, regarding the POST OFFICE GUARANTEE FUND.

GENTLEMEN,

WITH reference to the accompanying extracts* from the Memorandum submitted to the Royal Commission on the Public Services in India on behalf of the Superintendents and Gazetted Postmasters of the Indian Post Office, I have the honour to append for the information of the Commission a copy of Rule 5 of the rules relating to the Post Office Guarantee Fund, which describes the purposes to which the interest of the fund is applied.

2. It will be seen from clause (c) of paragraph II. of the rule that the total amount placed each year at

* Paragraphs 75,222 and 75,231.

APPENDIX III. (*continued*).

ay disposal for the purpose mentioned therein has itherto been limited to 25 per cent. of the surplus of he fund for the preceding year. This limit has now een raised by the Government of India, at my instance, o 75 per cent. of the surplus in question, as will be een from the copy of the correspondence on the subject hich I send herewith. It is anticipated that with this change the annual unexpended balance of the income of the fund will be reduced to a comparatively small amount. I have thought it right to bring the matter to your notice in case the information might be of use.

I have, &c.,
W. MAXWELL,
Director-General.

ENCLOSURES IN ABOVE.

(*i*) *Rule 5 of the Post Office Guarantee Fund.*

5. *Purposes to which Fund may be applied.*—This Fund shall be applied in the first place to the purpose of making good any loss that may be caused to Government by the neglect or misconduct of any person in the employ of the Post Office, provided that the sum that may be decreed against the Fund on this account by the Director-General of the Post Office shall not exceed Rs. 3,000 in the case of a superior servant, or Rs. 1,500 in the case of an inferior servant or of a postman or village postman.

II. The Fund shall then be applied to the purpose—

(*a*) of meeting the cost of keeping the accounts of the Fund;

(*b*) of paying rewards that may be granted from time to time for the giving of information in Post Office robbery cases and for specially honest and courageous service on the part of any persons in the employ of the Post Office while in discharge of their duties;

(*c*) of granting compensation to servants of the Post Office for loss of their private property, subject to the condition that not more than one month's pay may be awarded to any officer;

(*d*) of paying, to certain classes of officials of the Post Office, the actual travelling expenses incurred by them in the journey to the head-quarters of the district in which they are stationed to be examined by the Civil Surgeon for Postal Life Insurance (*see* rule 2A of the subsidiary rules in Appendix No. 17 of the *Post Office Manual*, Volume V.); and

(*e*) of paying gratuities, in very special circumstances, to the families of deserving Post Office servants left in indigent circumstances by the premature death of the individuals upon whom they depend for support and to Post Office officials who are, owing to no fault of their own, physically or mentally incapacitated for further service before they have earned pension, subject to the conditions that in no single case shall the gratuity exceed Rs. 500 and, that the total amount of the gratuity sanctioned in any one year shall not exceed 25 per cent. of the surplus of the Fund of the preceding year.

III. The balance of the Fund, after meeting the aforesaid charges, at the close of the official year may be spent, with the sanction of Government, for the benefit of the persons in the employ of the Post Office who subscribe to it.

(ii) *Copy of a communication from the Director-General of Posts and Telegraphs, To the Secretary to the Government of India, Department of Commerce and Industry, No.* 309, *C.F.R., dated* 21*st January* 1914.

With reference to the correspondence ending with Mr. Rainy's letter No. 9705–265, dated the 23rd October 1908, I have the honour to submit, for the favour of consideration and orders of Government, a proposal to increase the limit of the amount which is placed annually at my disposal out of the surplus of the Post Office Guarantee Fund for the grant, in very special circumstances, of compassionate gratuities to deserving postal officials or their families.

2. At present, the amount placed at my disposal each year is limited to a sum equal to 25 per cent. of the surplus of the Post Office Guarantee Fund for the preceding year, and as the surplus of the Post Office Guarantee Fund for last year was Rs. 17,471, the sum allotted to me during the current year was Rs. 4,367.

3. In spite of a strict observance of the prescribed conditions, the claims on the allotment for the current year were so numerous that I was obliged to sanction smaller compassionate gratuities than would otherwise have been justifiable. Nevertheless, the allotment for the current year was practically exhausted on the 6th November 1913 by which date the balance available was reduced to Rs. 5. I append a statement *marked A* giving details of the cases in which gratuities were sanctioned up to that date. Since then, I have received other applications for gratuity, details of which are given in the accompanying statement *marked B*, which cannot be dealt with at present for want of funds.

4. During the last three years, the average annual surplus of the Post Office Guarantee Fund amounted to Rs. 19,771 the unexpended balance of that surplus averaging Rs. 16,375 and by the 31st March 1913, the balance of the Fund itself rose to Rs. 11,09,373. The staff of the Post Office on that date consisted of over 92,000* men and in so large an establishment, it is inevitable that there will always be a considerable number of cases of real hardship caused by the death of the bread-winner of a family for which provision has to be made from the sum placed at my disposal, and I find that the amount is now insufficient to enable me to give assistance in all the really deserving cases.

5. In this connection, I would draw attention to the fact that, in the Memorandum submitted to the Public Services Commission by Superintendents of Post Offices and Postmasters, it has been represented as a grievance that the amount from the Post Office Guarantee Fund which is expended for the benefit of postal officials is disproportionate to the amount of the surplus of that Fund. In my opinion, the relief of distress amongst deserving postal officials or their families is the best object to which the surplus of the Fund could be devoted.

6. I beg, therefore, to ask that Government may be pleased to sanction the limit of the allotment in question being raised from 25 to 75 per cent of the surplus of the Guarantee Fund for the preceding year, or to 50 per cent. of that surplus, should Government consider that a smaller proportion than 75 per cent. will suffice for the present; and that the increased grant may be allowed for the current year.

(iii) *Letter from G. S. Hardy, Esq., B.A., I.C.S., Officiating Under Secretary to the Government of India, To the Director-General of Posts and Telegraphs, No.* 1001–11–*C., Government of India, Department of Commerce and Industry (Post Office), Delhi, dated the* 20*th February* 1914.

In reply to your letter No. 309, C.F.R., dated the 21st January 1914, and in modification of the orders contained in Mr. Rainy's letter No. 9705–265, dated the 23rd October 1908, I am directed to say that the Government of India are pleased to raise, with effect from the current financial year, the limit of the amount which may be expended by you annually out of the Post Office Guarantee Fund on the grant of compassionate gratuities to deserving postal officials or their families, from 25 per cent. to 75 per cent. of the surplus of that Fund for the preceding year.

* Actually 92,870.

APPENDIX IV.

STATEMENT of the CIVIL APPOINTMENTS on Rs. 200 a Month and over held by EUROPEANS, ANGLO-INDIANS, and INDIANS on the 1st April 1913, in the POST OFFICE of INDIA.

APPENDIX VI.

(Referred to in paragraph 75,152—Mr. Maxwell's Evidence.)

INDIAN TELEGRAPH DEPARTMENT.—NOTICE REGARDING FUTURE RECRUITMENT.

There are at present no vacancies in the superior establishment of the Indian Telegraph Department, and it is considered unnecessary for the present to recruit any Assistant Superintendents from the United Kingdom.

The arrangements for the future recruitment of the Department, whenever necessary, have not yet been finally settled, but an extract from the Report of the Committee which inquired into the expediency of maintaining the Royal Indian Engineering College at Coopers Hill is appended for general information.

India Office,
April 1912.

EXTRACT FROM REPORT ABOVE REFERRED TO.

(Paragraphs 32–34.)

Paragraph 32. *Method of recruiting Engineers.*—First, as to the recruitment of Engineers (for the Public Works Department). Our recommendation is that the Secretary of State should, by advertisements in the public press, call for candidates having the following qualifications:—

(*a*) That their age does not exceed 24 years.

(*b*) That they have obtained a degree or diploma, or other distinction equivalent thereto, at some recognised and approved institution for engineering education.

(*c*) That they have had at least one year's subsequent experience as assistant in the preparation of the designs for, or in the execution of, some engineering work of importance.

(*d*) That they satisfy the usual requirements as to character and nationality.

Selection should be made from the candidates in such way as the Secretary of State may think fit, but we advise that the selection should be entrusted, subject to the final approval of the Secretary of State, to an Advisory Board of which at least one eminent representative of the engineering profession should be invited to become a member. The duty of the Board would be to select the best from amongst the candidates by examining their testimonials and distinctions, by personal interview, and by making such inquiries as to their history and character as might in their opinion be advisable.

Paragraph 33. *Same Method of recruiting for the Telegraph Department.*—The recommendations which have been made in the foregoing paragraph apply equally to the selection of officers for appointment to the Telegraph Department, except that these officers will be required to have spent at least one year as an electrical engineer or in other similar capacity.

Paragraph 34. *Selected Candidates to proceed at once to India.*—Candidates selected for appointment to the Public Works Department and the Telegraph Department should proceed immediately to India without undergoing any further training in this country.

17th August 1903.

APPENDIX VII.

OFFICIALS and NON-OFFICIALS who furnished WRITTEN EVIDENCE to the ROYAL COMMISSION in connection with their INQUIRY into the POST OFFICE OF INDIA and TELEGRAPH DEPARTMENT, but who were not orally examined.

1. Munshi Shuja-ud-din Khan, Superintendent of Post Offices, 4th grade, Sind Sagar, near Jhelum.

2. J. A. H. Potter, Esq., 1st grade Sub-Assistant Superintendent, Indian Government Telegraph Department (retired).

3. The Representative Committee of Superintendents of Post Offices, Burma Circle (F. A. V. Sausman, Esq., Chairman, and six Superintendents of Post Offices, being a Representative Committee of Superintendents of Post Offices, Burma Circle).

4. E. A. Doran, Esq., Postmaster-General, Bombay.

5. A. C. Banerjee, Esq., Superintendent of Telegraphs, Nagpur Division.

6. Babu Motilal Ghosh, Editor of Amrita Bazar Patrika, Calcutta.

7. Krishan Rao, Esq., and 12 other members of the Signalling Establishment of the Indian Telegraph Department.

8. Nikku Ram, Esq., Officiating Superintendent of Post Offices, Gujrat Division, Punjab.

INDEX.

(The numbers refer to paragraphs.)

POST OFFICE OF INDIA AND TELEGRAPH DEPARTMENT.

A.

Administrative posts, Post Office, recruitment, method, *Maxwell*, 75,173; *Schöneman*, 75,336, 75,351.

Allowances (*see under* Leave and Pay).

Amalgamation of Post Office and Telegraph Department (*see under* Telegraph Department).

Anglo-Indians, civil appointments on Rs. 200 a month and over, held by, 1st April 1913 - - - p. 98

B.

Baniyas and Vaisyas, civil appointments on Rs. 200 a month and over held by, 1st April 1913 - p. 98

Brahmans, civil appointments on Rs. 200 a month and over held by, 1st April 1913 - - - - p. 98

Buddhists, civil appointments on Rs. 200 a month and over held by, 1st April 1913 - - - - p. 98

C.

Captain, D. S., Clerici, C. J. E., and Murtrie, D. J., joint evidence - - - - 75,569–75,599

Charlu, P. A. Krishnama, evidence of (*see* Rodrigues, J. F., joint evidence).

Civil appointments on Rs. 200 a month and over, held by Europeans, Anglo-Indians, and Indians on 1st April 1913 - - - - - - p. 98

Clerici, C. J. E., evidence of (*see* Captain, D. S., joint evidence).

Conditions of Service, Post Office:

House accommodation should be provided where necessary, *McMinn*, 75,216, 75,226, 75,238; *Hanson*, 75,375.

Improvements advocated, *Raha* - - - 75,368

Tents should be supplied where necessary and tentage allowed, *McMinn*, 75,216, 75,226; *Hanson*, 74,375.

Conditions of Service, Telegraph Department:

House accommodation, provision advocated, *Streatfeild-James*, 75,278, 75,288, 75,308; *Mitra*, 75,317; *Mayston*, 75,408; *Goodall*, 75,519; *Morgan*, 75,535; *Gibbs*, 75,615.

Particulars, *Maxwell*, 75,154; *Streatfeild-James*, 75,272; *Roy*, 75,431.

Same for all officers, whether recruited in England or India, advocated, *Mitra*, 75,312; *Morgan*, 75,530.

(*see also under* Upper Subordinate Service.)

D.

Deputy Inspectors-General, pay, scale advocated, *McMinn* - - - - - 75,217, 75,227

Deputy Postmasters-General, pay, scale advocated, *McMinn*, 75,217, 75,227; *Hanson*, 75,367.

Director-General of Posts and Telegraphs, Recruitment:

System, *Maxwell*, 75,206; *Hanson*, 75,382.

System advocated, *McMinn*, 75,248, 75,254; *Mayston*, 75,401.

E.

Europeans, civil appointments on Rs. 200 a month and over held by, 1st April 1913 - - - p. 98

F.

Fines, should be utilised for benefit of postal officials, *McMinn* - - - - - 75,222, 75,231

Fund (*see* Post Office Guarantee Fund *and* Provident Fund).

Furlough (*see under* Leave).

G.

Gibbs, R. T., evidence of - - 75,600–75,622

Goodall, H. C. A., evidence of - 75,508–75,527

Guarantee Fund (*see* Post Office Guarantee Fund).

H.

Hanson, R. W., Rae, C. D., and Raha, H. K., joint evidence - - - - - 75,367–75,394

Hindus, civil appointments on Rs. 200 a month and over, held by, 1st April 1913 - - - p. 98

House accommodation (*see under* Conditions of Service, Telegraph Department, *and under* Upper Subordinate Service, Telegraph Department).

I.

Imperial Service, Telegraph Department, Division of Department into Provincial Service and (*see under* Telegraph Department).

Indian Christians, civil appointments on Rs. 200 a month and over, held by, 1st April 1913 - p. 98

Indians:

Limitations in employment in Telegraph Department, *Maxwell*, 75,158; *Streatfeild-James*, 75,276; *Mitra*, 75,316; *Roy*, 75,435; *Morgan*, 75,534.

no Limitations in employment in subordinate service of Telegraph Department, *Walker* - - 75,490

no Limitations in employment in Post Office, and none needed, *Maxwell*, 75,149, 75,206; *McMinn*, 75,220; *Schöneman*, 75,332.

Telegraph Department not attractive to, *Roy* 75,456–7

(*see also* Recruitment, Telegraph Department.)

K.

Kaiyasthas, civil appointments on Rs. 200 and over, held by, 1st April 1913 - - - - p. 98

Kshatryas, civil appointments on Rs. 200 and over, held by, 1st April 1913 - - - - - p. 98

L.

Leave, Post Office:

Allowances, increase advocated, *Maxwell*, 75,147, *Schöneman*, 75,330, 75,344, 75,351; *Hanson*, 75,388.

Cadre not large enough to allow men always to obtain leave to which entitled, *Schöneman* - 75,344

Earned, should be granted irrespective of when officer was last on leave, provided he can be spared, *McMinn* - - - - - 75,218–75,228

European service rules to officers drawing Rs. 500 and upwards advocated, *McMinn* - 75,218–752,28

Furlough, qualifying period, reduction advocated, *Maxwell*, 75,147; *Hanson*, 75,389.

PRIVILEGE:

Cumulative period, extension advocated, *Maxwell*, 75,147; *McMinn*, 75,218, 75,228.

45 days on 10½ months' service:

Advocated, *McMinn*, 75,218, 75,228, 75,243; *Vaughan*, 75,262.

not Justified, *Hanson* - - 75,367, 75,379

Three years' furlough, leave on medical certificate or on private affairs spent in India should count as service for pension, *McMinn* - 75,218, 75,228

Leave, Telegraph Department:

Abolition of minimum limit of combined leave advocated, *Mitra* - - - - - 75,314

Allowances inadequate, and increase advocated, *Streatfeild-James*, 75,274, 75,307; *Mitra*, 75,314 *Shields*, 75,404.

Leave, Telegraph Department—*continued.*
Counting towards pension, should be no difference between periods spent in and out of India, *Mitra* 75,314
Earned, should be granted irrespective of when officer was last on leave, provided he can be spared, *Streatfeild-James* - - 75,274, 75,286, 75,300
Furlough, commutation of period on half pay to half period on full pay advocated, *Mitra*, 75,314; *Morgan*, 75,541.
Furlough, reduction in qualifying period advocated, *Roy* - - - - - - - - 75,433
PRIVILEGE:
Cumulative period, extension advocated, *Streatfeild-James*, 75,274, 75,286, 75,300; *Mitra*, 75,314; *Shields*, 75,404; *Morgan*, 75,532.
Restriction under which officer cannot retire within 3 months of taking, without forfeiting, should be removed, *Streatfeild-James* - 75,274, 75,286
Retrospective effect should be given to any improvements which may be granted, *Streatfeild-James* 75,278
Study, advocated, *Roy*, 75,433, 75,446; *Goodall*, 75,511, 75,522, 75,524; *Gibbs*, 75,607.
(*see also under* Upper Subordinate Service.)
